44.	TOWN OF SOUTH VALLEY	44-1
45.	TOWN OF YORKSHIRE	45-1

DRAFT

1. INTRODUCTION

1.1 BACKGROUND

The Federal Emergency Management Agency (FEMA) encourages multi-jurisdictional planning for local hazard mitigation. Such planning efforts can generate a unified local voice on hazard mitigation, with cross-jurisdictional support for a hazard mitigation plan's recommended mitigation actions. They also help to form working relationships among participants' emergency managers, floodplain administrations, and other development agencies (FEMA 2021). Eligible participants for multi-jurisdiction hazard mitigation plans are local governments defined as follows in Title 44 of the Code of Federal Regulations, Part 201 (Mitigation Planning):

"Any county, municipality, city, town, township, public authority, school district, special district, intrastate district, council of governments (regardless of whether the council of governments is incorporated as a nonprofit corporation under State law), regional or interstate government entity, or agency or instrumentality of a local government; any Indian tribe or authorized tribal organization, or Alaska Native village or organization; and any rural community, unincorporated town or village, or other public entity." (44 CFR Section 201.2)

In multi-jurisdictional hazard mitigation planning, every participating jurisdiction must meet the federal requirements for local mitigation planning. This means that each jurisdiction must actively participate in the planning process and must officially adopt the plan (44 CFR Section 201.6a(4)).

For the Cattaraugus County Hazard Mitigation Plan (HMP), a Planning Partnership was formed to leverage resources and to meet the federal local mitigation planning requirements for as many eligible governments in the County as possible. Members of the Planning Partnership consisted of representatives from each participating jurisdiction. Cattaraugus County was the lead agency for this planning effort and directed the planning process with assistance from a contract planning consultant (Tetra Tech). A Steering Committee with broad representation across the county provided guidance and direction for the HMP planning process. Each participating planning partner has prepared a jurisdictional annex to this plan.

This chapter describes the Cattaraugus County HMP Planning Partnership, its responsibilities throughout the planning process, and the jurisdictional annexes developed as a result of the plan update efforts. The remaining chapters in this volume of the HMP present the annexes for each participating jurisdiction.

1.2 PLANNING PARTNER INVOLVEMENT

1.2.1 Initial Solicitation

Cattaraugus County solicited the participation of all eligible jurisdictions in the County at the commencement of this project. The following is a list of the jurisdictions that participated in the update process and have met the minimum requirements of participation as established by the County and the Steering Committee:

- Cattaraugus County
- Town of Allegany
- Village of Allegany
- Town of Ashford
- Town of Carrollton
- Village of Cattaraugus
- Town of Coldspring
- Town of Conewango
- Town of Dayton
- Village of Delevan
- Town of East Otto
- Town of Ellicottville
- Village of Ellicottville
- Town of Farmersville
- Town of Franklinville
- Village of Franklinville
- Town of Freedom
- Village of Gowanda
- Town of Great Valley
- Town of Hinsdale
- Town of Humphrey
- Town of Ischua
- Town of Leon
- Town of Little Valley
- Village of Little Valley
- Town of Lyndon
- Town of Machias
- Town of Mansfield
- Town of Napoli
- Town of New Albion
- City of Olean
- Town of Olean
- Town of Otto
- Town of Perrysburg
- Town of Persia
- Town of Portville
- Village of Portville
- Town of Randolph
- Town of Red House
- City of Salamanca
- Town of Salamanca
- Village of South Dayton
- Town of South Valley
- Town of Yorkshire

1.2.2 Planning Partner Expectations

The following list of planning partner expectations was agreed to in each letter of intent to participate:

- Identify municipal representatives to serve as the planning points of contacts. These people were responsible for representing the community and assuring that these participation expectations are met by their community.
- Support the Steering Committee selected to oversee the development of this plan.
- Provide representation at municipal Planning Committee meetings
- Provide data and information about the community as requested by the Steering Committee or the contract consultant, including:
 - Structure and facility inventory data
 - New development and anticipated development
 - Natural hazard risk areas
 - Natural hazard events and losses that have impacted the community in the last five years
 - Plans, studies, reports, and ordinances addressing natural hazard risk
 - Mitigation activity in the community in the last five years, including progress on previously identified mitigation actions.
- Support public outreach efforts in the community, which may include:

The **Planning Partnership** is responsible for developing and reviewing draft sections of the hazard mitigation plan, creating the mitigation strategy for their jurisdiction, and adopting the final plan. Members of the Planning Partnership have the expertise to develop the plan and have their jurisdiction's authority to implement the mitigation strategy developed during the planning process.

- Providing notices of the planning project on the municipal website with links to a County project website
- Providing notice of the planning project, the availability of plan documents, and notice of public meetings via available local media (e.g. newsletters, flyers, email blasts, social media, etc.)
- Advertising and supporting public meetings in the area
- Supporting outreach to National Flood Insurance Program (NFIP) Repetitive Loss and Severe Repetitive Loss property owners in the community.
- Assist with the identification of stakeholders within the community who should be informed and potentially involved with the planning process.
- Complete data and information collection survey forms in a timely manner.
- Identify specific mitigation actions to address each of the natural hazards posing significant (or high or medium) risk to the community.
- Involve the local NFIP Floodplain Administrator in the planning process.
- Review draft plan sections when requested and provide comment and input as appropriate.
- Adopt the plan by resolution of the local governing body after FEMA conditional approval.
- Periodically provide the Steering Committee with reports of municipal staff and volunteer labor spent on the planning process.

Under the plan implementation and maintenance protocol established in Volume I of the HMP, it is intended that the Planning Partnership will remain active to support maintenance of the HMP after the plan has been adopted. By adopting this plan, each planning partner agrees to the plan implementation and maintenance protocol. Given that individual commitments change over time, it will be the responsibility of each jurisdiction and its points of contact to inform the County's coordinator for this HMP of any changes in representation.

1.3 JURISDICTIONAL ANNEX PREPARATION PROCESS

Jurisdictional annexes provide a unique, stand-alone guide to mitigation planning for each jurisdiction participating in a multi-jurisdiction HMP. The Cattaraugus County HMP is organized so that there is an annex for Cattaraugus County and for every jurisdiction within the County's borders. This volume of the HMP includes an annex for each jurisdiction in Cattaraugus County, including those that did not fully participate.

Workshops and additional meetings (in person, by email, or by teleconference) to complete the jurisdictional annexes were held with the County, the contract consultant, and the Steering Committee throughout the planning process. Details regarding these meetings are described further in Volume I.

1.3.1 Incorporation of Information from Previous HMP

In order to facilitate the update of the jurisdictional annexes, data from the 2020 Cattaraugus County HMP annexes was transferred to the most current annex format, which has evolved to meet changing federal and state criteria. Clear instructions were provided to the representatives of each planning partner. This transfer of information provided a basis to address the following:

- Changes in local capabilities and vulnerabilities
- The current status of the 2020 HMP mitigation strategy
- A new mitigation strategy to address identified issues and to increase community resiliency

1.3.2 Kickoff Meeting

The County invited all municipalities to participate in a planning partner kickoff meeting held on March 7, 2024, to provide an overview of the planning process, including meetings and worksheets that would be used to gather information for annex preparation. Key elements of the worksheets were discussed and subsequently completed by the appropriate jurisdictional personnel for each worksheet. The worksheets were collected, and the information was incorporated into each jurisdictional annex. In the event additional information was needed, the jurisdictional point of contact was contacted to provide more input into their annex.

1.3.3 Hazard Ranking Exercise

At the risk assessment meeting on September 17, 2024, the consultant summarized the findings of the risk assessment for the hazards of concern evaluated in this HMP, including an initial ranking of hazards using the risk-related ranking methodology described in Volume I. Each planning partner was asked to review the hazard ranking for its jurisdiction and revise as appropriate based on history of events, probability of occurrence, and the potential impact on people, property, and the economy. This exercise familiarized the planning partners with how to use the risk assessment as a tool to support other planning and hazard mitigation processes and to help prioritize types of mitigation actions that should be considered. Hazards that were ranked as “high” for each jurisdiction as a result of this exercise were considered to be priorities for identifying appropriate mitigation actions, although jurisdictions also identified actions to mitigate “medium” or “low” ranked hazards as appropriate.

1.3.4 Mitigation Strategy Workshop

A mitigation strategy workshop was held on September 17, 2024, to provide an overview on how to develop a strong mitigation strategy. In preparation for this workshop, the consultant provided a list of problem areas and vulnerabilities identified during the planning process, along with feedback from the citizen survey, to support the development of relevant projects for the mitigation strategy. Workshop participants received the following FEMA publications to use as a resource as part of a comprehensive review of all possible activities and mitigation measures to address hazards of concern:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

This workshop included the development of focused problem statements based on the impacts of natural hazards in the County and its communities. These problem statements provide detailed descriptions of problem areas, including known impacts on the jurisdiction (past damage, loss of service, etc.). Where possible, the statements include the street address of the problem location, adjacent streets, water bodies, and well-known structures as well as a brief description of existing site conditions (topography, terrain, hydrology). The problem statements form a bridge between the risk assessment (which quantifies impacts on each community), the capability assessment (which identifies capabilities for reducing hazard risks and supporting hazard mitigation), and the development of actionable mitigation strategies.

The County and the mitigation consultant worked with each jurisdiction to identify clear, implementable mitigation actions and to further support the completion of the jurisdictional annexes. The NYS DHSES Action Worksheet template and instructions are provided in Appendix B (NYS DHSES Planning Standards).

1.4 JURISDICTIONAL ANNEX FORMAT

The jurisdictional annex format is designed to document local compliance with the 44 CFR local mitigation planning regulations. It also achieves the following:

- Providing a locally relevant synthesis of the overall mitigation plan that can be readily presented, distributed, and maintained
- Facilitating local understanding of the community's risk from natural hazards
- Facilitating local understanding of the community's capabilities to manage natural hazard risk, including opportunities to improve those capabilities
- Facilitating local understanding of the efforts the community has taken, and plans to take, to reduce its natural hazard risk
- Facilitating the implementation of mitigation strategies, including the development of grant applications
- Providing a framework by which the community can continue to capture relevant data and information for future plan updates

The following are the elements of the jurisdictional annex.

- **Section X.1: Hazard Mitigation Planning Team:** Identifies the hazard mitigation planning primary and alternate contacts and floodplain administrator. Provides details on which departments were involved in the development of the jurisdictional annex. The widest range of departments, stakeholders, and persons familiar with the jurisdiction should be involved in the development of the jurisdictional annexes. Further detail on participants is provided in Volume I.
- **Section X.2: Community Profile:** Provides a profile of the jurisdiction, including population and socially vulnerable populations.
- **Section X.3: Jurisdictional Capability Assessment and Integration:** Provides an inventory and evaluation of the jurisdiction's tools, mechanisms, and resources available to support hazard mitigation and natural hazard risk reduction. Tables provide an inventory of the jurisdiction's planning, regulatory, administrative, technical, and fiscal capabilities, its level of participation in state and federal programs designed to promote and incentivize local risk reduction efforts, and its adaptive capacity to adjust to damage and respond to consequences.
- **Section X.4: National Flood Insurance Program (NFIP) Compliance:** Summarizes jurisdiction-specific information related to managing and regulating the regulatory floodplain, including current and future compliance with the NFIP.
- **Section X.5: Growth/Development Trends:** Summarizes recent and expected future development trends, including major residential/commercial development and major infrastructure development.
- **Section X.6: Jurisdictional Risk Assessment:** Provides information regarding each jurisdiction's vulnerability to the identified hazards. Full data and information on the hazards of concern, the methodology used to develop the vulnerability assessments, and the results of those assessments that serve as the basis of these local hazard rankings may be found in Volume I.
 - **Hazard Area:** Each annex includes a map (or series of maps) illustrating identified hazard zones and critical facilities. The maps also show areas of known or anticipated future development, as available.
 - **Hazard Event History:** Identifies hazard events that have caused significant impacts within the jurisdiction, including a summary characterization of those impacts identified by the jurisdiction.

- **Hazard Ranking and Vulnerabilities:** Each jurisdiction has differing degrees of risk exposure and vulnerability. The local hazard ranking identifies each jurisdiction's local degree of risk to each hazard, supporting the selection and prioritization of actions to reduce the highest levels of risk for each community.
- **Critical Facilities:** Identifies potential flood losses to critical facilities in the jurisdiction based on the flood vulnerability assessment process presented in Volume I.
- **Identified Issues:** Presents other specific hazard vulnerabilities as identified by the jurisdiction.
- **Section X.7: Mitigation Strategy and Prioritization:** Discusses and provides the status of past mitigation actions and status and describes proposed hazard mitigation actions and prioritization.
 - **Past Mitigation Action Status:** Where applicable, a review of progress on the jurisdiction's prior mitigation strategy is presented, identifying the disposition of each prior action in the jurisdiction's updated mitigation strategy. Other completed or ongoing mitigation activities that were not specifically part of a prior local mitigation strategy may be included in this subsection as well.
 - **Completed Mitigation Actions Not Identified in the Previous Mitigation Strategy:** Other completed or ongoing mitigation activities that were not specifically part of a prior local mitigation strategy may be included in this subsection as well.
 - **Proposed Hazard Mitigation Actions for the Plan Update:** Tables and action worksheets at the end of each annex present the jurisdiction's updated mitigation strategy, a summary of the local mitigation strategy prioritization and a summary of the action categories and hazards addressed.

Each jurisdiction's annex is a living document that will continue to be improved as resources permit. Continued efforts to maintain the annex will ensure that it remains current and will improve its effectiveness as the key tool, reference, and guiding document by which the jurisdiction will implement hazard mitigation locally.

1.5 COVERAGE UNDER THE PLAN

All 45 original planning partners fully met the participation requirements specified by the Steering Committee and have annexes included in this volume. Those that did not meet the requirements will not be able to seek FEMA or state approval at the time of plan submittal, nor will they be eligible to obtain FEMA grant funding. Table 1-1 lists the status of each jurisdiction. Note that participation in scheduled Planning Partnership meetings provides only a partial indication of the level of participation of each jurisdiction. Appendices in Volume I provide details on further participation and meeting attendance.

2. COUNTY OF CATTARAUGUS

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the County of Cattaraugus with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and risk to the general public. The annex presents a general overview of Cattaraugus, describes who participated in the planning process, assesses Cattaraugus's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

2.1 HAZARD MITIGATION PLANNING TEAM

The County of Cattaraugus identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many County departments. The Secretary to Commissioner of Public Works and the NIMS Coordinator represented the community on the Cattaraugus County HMP Steering Committee and Core Planning Group and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 2-1 summarizes County officials who participated in the development of the annex and in what capacity. Additional documentation of the County's planning activities through Steering Committee meetings is included in Volume I.

Name/Title: Kathy Ellis, Commissioner of Public Works Method of Participation: Annex review	

2.2 COMMUNITY PROFILE

Cattaraugus County lies in the Southwestern region of New York State. The county is bordered to the north by Erie and Wyoming Counties, to the east is Allegany County, to the south is the State of Pennsylvania, and to the west is Chautauqua County. The county was formed in 1808 from Genesee County and originally named “Town of Olean.” Cattaraugus County has a total area of 1,324 square miles (including both land and water).

The major river of Cattaraugus County is the Allegheny River, located in the southern portion of the county. To the north, Cattaraugus Creek forms the border between Cattaraugus County and Erie County and flows westerly into Lake Erie. Great Valley Creek and Little Valley Creek drain the central portion of the county into the Allegheny River. Other important waterways within the County include Ischua, Oil, Olean, Tunungwant, Conewango, Little Conewango, Mansfield, and Caneadea Creeks.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 5.7 percent of the population is 5 years of age or younger, 20.6 percent is 65 years of age or older, 0.5 percent is non-English speaking, 17.1 percent is below the poverty threshold, and 16.7 percent is considered disabled.

2.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Cattaraugus County performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Cattaraugus County to identify opportunities for integrating mitigation concepts into ongoing County procedures.

2.3.1 Planning and Regulatory Capability and Integration

Table 2-2 summarizes the planning and regulatory tools that are available to Cattaraugus County.

Table 2-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
All codes, ordinances, and regulations are administered at the municipal level.				
PLANNING DOCUMENTS				
General/Comprehensive Plan	Yes	Vision 2025 Comprehensive Plan, Moving Cattaraugus County Forward	County	EDPT
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>The plan includes the following goals:</p> <ul style="list-style-type: none"> • Goal 1: Support protecting the farmland, forests, and communities of the County • Goal 2: Promote economic development opportunities • Goal 3: Promote agricultural heritage and economy • Goal 4: Promote tourism and foster local arts and cultural organizations • Goal 5: Support stewardship of the County's wetlands, forests, mineral resources, rivers, and other environmental assets • Goal 6: Revitalize and restore cities, villages, and hamlets • Goal 7: Promote transportation • Goal 8: Promote healthy and safe communities 				
Capital Improvement Plan	Yes	Capital Improvement Plan	County	DPW
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>County entities will submit desired capital projects to County Administrator's Office with project titles, descriptions, and anticipated costs. The submitted projects may include those with relevance to hazard mitigation, including stormwater management or making facilities more sustainable, and upgrading infrastructure to meet current design and climate objectives. The DPW also integrates hydraulically deficient bridges and culverts into the long-term capital program strategy.</p>				
Disaster Debris Management Plan	Yes	Disaster Debris Management Plan	County	OES
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>The plan establishes procedures and guidelines for managing disaster debris in a coordinated, environmentally responsible, and cost-effective manner.</p>				
Floodplain Management or Watershed Plan	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>Floodplain management/Watershed plans are managed at the local/municipal level.</p>				
Stormwater Management Plan	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>Stormwater management plans are managed at the local/municipal level.</p>				
Open Space Plan	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>Open space plans are managed at the local/municipal level.</p>				
Urban Water Management Plan	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>Urban water management is administered by the cities of Olean and Salamanca, respectively.</p>				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Habitat Conservation Plan	Yes	Habitat Management Plan for Allegheny Reservoir Wildlife Management Area	State	NYSDEC
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>The purpose of this plan is to provide the overall context of the habitat on the WMA/MUA and identify the target species for management; identify habitat goals for WMA/MUA-specific target species, contemplating juxtaposition of all habitat types to guide the conservation, and management of sensitive or unique species or ecological communities; identify acreage-specific habitat goals for the WMA/MUA to guide management actions; provide specific habitat management prescriptions that incorporate accepted best management practices; establish a forest management plan to meet and maintain acreage goals for various forest successional stages; address management limitations such as access challenges (e.g., topography); and provide the foundation for evaluating the effectiveness of habitat management.</p>				
Economic Development Plan	Yes	Economic Strategic Plan	County	EDPT
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>This plan provides a policy direction for economic growth, builds upon County strengths and assets, and identifies strategies, programs, and projects to improve the local economy.</p>				
Community Wildfire Protection Plan	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>Community wildfire protection plans are administered by local fire companies.</p>				
Community Forest Management Plan	Yes	Cattaraugus Unit Management Plan	State	NYSDEC
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>NYSDEC has developed a Cattaraugus Unit Management Plan (UMP) which describes the proposed management activities for these lands. In addition to management objectives, the UMP contains detailed information on natural features, recreational infrastructure, geology, natural and human history, habitats, wildlife, fisheries and much more.</p>				
Transportation Plan	Yes	Coordinated Public Transit-Human Services Transportation Plan	County	County Administrator's Office
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>The plan seeks to provide a framework for the coordination of transportation services for aging adults, persons with disabilities, and individuals with economic disadvantages within the planning area.</p>				
Agriculture Plan	Yes	Agricultural and Farmland Protection Plan	County	EDPT
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>The plan includes recommendations to address critical structural and industry-wide concerns that impact the long-term viability of agriculture in Cattaraugus County; for improving conditions specific to health and well-being of local agricultural enterprises through training, business planning, network development, mentoring, finance, research and development support, and similar services; and to offer programs and processes that address the land use issues facing both towns and farmers.</p>				
Climate Action/Resilience/Sustainability Plan	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>The New York State Plan exists as guidance for the County's climate action/resilience/sustainability initiatives.</p>				
Tourism Plan	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p>				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Business/ Downtown Development Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

Other	No	-	-	-

Comprehensive Emergency Management Plan	Yes	Comprehensive Emergency Management Plan (CEMP)	County	OES
--	-----	--	--------	-----

How has or will this be integrated with the HMP and how does this reduce risk?

The CEMP defines the scope of preparedness and emergency management activities necessary in the County. This document assigns responsibility to organizations and individuals for carrying out specific actions that exceed routine responsibility at projected times and places during an emergency; sets lines of authority and organizational relationships and shows how all actions will be coordinated; identifies how people and property are protected; and identifies personnel, equipment, facilities, supplies, and other resources available within the jurisdiction or by agreement with other jurisdictions.

County Emergency Preparedness Assessment	Yes	County Emergency Preparedness Assessment (CEPA)	County	OES
---	-----	---	--------	-----

How has or will this be integrated with the HMP and how does this reduce risk?

This plan is written by performing an analysis on a county's risk and capabilities using a standardized methodology. Potential response limitations and funding gaps, as well as resource needs, are also discussed. The session concludes with a SWOT analysis (Strengths, Weaknesses, Opportunities and Threats) to identify opportunities for future growth and better understand major threats to the county's emergency preparedness operations.

Continuity of Operations Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

Substantial Damage Response Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

Threat and Hazard Identification and Risk Assessment	Yes	Threat & Hazard Identification & Risk Assessment (THIRA)	County	OES
---	-----	--	--------	-----

How has or will this be integrated with the HMP and how does this reduce risk?

The Threat and Hazard Identification and Risk Assessment (THIRA) is a three-step risk assessment process that helps the County understand its risks to natural, technological, and human-caused hazards and what must be done to address those risks.

Post-Disaster Recovery Plan	Yes	CEMP	County	OES
------------------------------------	-----	------	--------	-----

How has or will this be integrated with the HMP and how does this reduce risk?

The Post-Disaster Recovery Plan located within the County's CEMP. The purpose of this plan is to facilitate pre-disaster planning in a way that guides long-term recovery efforts (five years or more) following a disaster. The plan identifies roles and responsibilities of key people, departments, and agencies; address the need for temporary regulations such as post-disaster building moratoria; address potential impacts to historic resources; address potential impacts to non-conforming uses; and address location and other provisions for temporary housing.

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Public Health Plan	Yes	Health Department Strategic Plan 2022–2025	County	Health Department

How has or will this be integrated with the HMP and how does this reduce risk?

The Cattaraugus County Health Department's (CCHD) Strategic Planning Process began in April 2022 using the resources of the New York State Department of Health NYS Public Health Corp Fellows. As a part of this process, the fellows reviewed the 2018–2021 strategic plan for past successes and failures and discussed what was needed for future success. Both an external assessment, in which county demographic data, economic factors, health outcomes, and community health assessment findings that have the potential to affect the agency and strategies were examined, and an internal assessment of a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis was completed.

Other: Community Needs Assessment and Community Health Improvement Plan	Yes	Community Needs Assessment and Community Health Improvement Plan	County	Health Department
--	-----	--	--------	-------------------

How has or will this be integrated with the HMP and how does this reduce risk?

The 2022–2024 OGH/BRMC Community Service Plan (CSP) and the CCHD's Community Health Assessment and Community Health Improvement Plan (CHA-CHIP) were conducted to identify significant health needs as outlined by the New York State Department of Health's 2022–2024 Prevention Agenda, where applicable. It also provides critical information OGH/BRMC, the CCHD, and others in a position to make a positive impact on the health of the region's residents. The CSP/CHA-CHIP enables the health department, hospital, and other community partners to strategically establish priorities, develop interventions, and direct resources to improve the health of residents living in the service area.

The CSP/CHA-CHIP includes a detailed examination of priority areas identified in the NYS Prevention Agenda: (1) prevent chronic diseases; (2) promote a healthy and safe environment; (3) promote healthy women, infants and children; (4) promote well-being and prevent mental health and substance use disorders; and (5) prevent communicable diseases. The Prevention Agenda is a six-year effort to make New York the healthiest state. Developed in collaboration with 140 organizations, the plan identifies New York's most urgent health concerns, and suggests ways local health departments, hospitals, and partners from health, business, education, and community organizations can work together to solve them.

2.3.2 Development and Permitting Capability

Table 2-3 summarizes the capabilities of Cattaraugus County to oversee and track development.

Table 2-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?		
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	No	The County Planning Board would review and make comments on various permit applications. They do not, however, issue the permits – applications are referred back to the local jurisdiction.
Are permits tracked by hazard area? (For example, floodplain development permits.)	No	If performed, permit tracking by hazard area is handled locally.
Do you have a buildable land inventory?		
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 	No	-
Describe the level of buildout in your jurisdiction.	N/A	20 percent. A buildable land analysis is noted in Chapter 3 (County Profile).

2.3.3 Administrative and Technical Capability

Table 2-4 summarizes potential staff and personnel resources available to Cattaraugus County and their current responsibilities that contribute to hazard mitigation.

Table 2-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	The Planning Division serves as staff for the County Planning Board, which must act upon referrals from local municipalities sent to the County under Sections 239 l and m of New York State General Municipal Law. The staff makes recommendations to the County Planning Board regarding these referrals. In addition, the staff also makes recommendations on State Environmental Quality Reviews (SEQR).
Zoning Board of Adjustment	No	Local jurisdictional capability
Planning Department	Yes	The County is involved in many inter-municipal and countywide plans and development projects. Work in this area is often performed with partners where the County Planning staff has a defined role representing the County's interest in the project or activity.
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	Yes	Works to improve all the communities of Cattaraugus County through retention and expansion of employment; encouraging private sector investment; fostering entrepreneurship; and promoting the County as a tourism destination, place to locate a business and as a truly great place to reside and raise a family.
Public Works/Highway, Engineering, Fleet, & Refuse Divisions	Yes	The lion's share of the financial and human resources in the Public Works Department is devoted to the maintenance of the 395 miles of road, 265 bridges, 258 culverts and 1,530 drainage structures under County jurisdiction. There are approximately 170 employees within the Department of Public Works. The Department is comprised of a robust Highway Division as well as an Engineering Division, Fleet Division, Refuse Division, and Weights & Measures.
Construction/Building/Code Enforcement Department	No	Local jurisdictional capacity
Emergency Management/Public Safety Department	Yes	The Office of Emergency Services is made of Emergency Management, Fire Service, and Emergency Medical Services (EMS).
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	Yes	Department of Buildings and Grounds oversees the maintenance and repair of county facilities and grounds.

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
		Public Works Department is devoted to the maintenance of the 395 miles of road, 265 bridges, 258 culverts and 1,530 drainage structures under County jurisdiction.
Mutual aid agreements	Yes	Public Works, Emergency Service with municipalities
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other: Agricultural and Farmland Protection Board	Yes	Agricultural and Farmland Protection Board (AFPB) is an 11-member board advises the Cattaraugus County Legislature on agricultural issues and is tasked with implementing the Agricultural and Farmland Protection Plan.
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	Yes	EDPT/Director
Engineers or professionals trained in building or infrastructure construction practices	Yes	DPW
Planners or engineers with an understanding of natural hazards	Yes	DPW
Staff with expertise or training in benefit/cost analysis	Yes	DPW
Professionals trained in conducting damage assessments	Yes	Risk management/County Attorney's Office
Personnel skilled or trained in GIS and/or Hazus applications	Yes	DPW & Real Property
Staff that work with socially vulnerable populations or underserved communities	Yes	Department of Social Services, One Stop Career Center, Health Department, Department of the Aging, Department of Community Services, Veterans Service Agency, Youth Bureau
Environmental scientists familiar with natural hazards	No	-
Surveyors	Yes	DPW/Land Surveyor
Emergency manager	Yes	Office of Emergency Services
Grant writers	Yes	Department of Economic Development, Planning & Tourism
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

2.3.4 Fiscal Capability

Table 2-5 summarizes financial resources available to Cattaraugus County.

Table 2-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	Yes
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	Yes
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	Yes
Incur debt through private activity bonds	Yes
Withhold public expenditures in hazard-prone areas	Yes
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	Yes
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	Yes

2.3.5 Education and Outreach Capability

Table 2-6 summarizes the education and outreach resources available to Cattaraugus.

Table 2-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	No	-
Personnel skilled or trained in website development	Yes	Information Services
Hazard mitigation information available on your website	Yes	Office of Emergency Services webpage
Social media for hazard mitigation education and outreach	Yes	Facebook, Twitter, Instagram
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	Yes	NY-Alert, Code Red, Everbridge
Natural disaster/safety programs in place for schools	Yes	Per NYS Education System, every school must have their own emergency plans.
Organizations that conduct outreach to socially vulnerable populations and underserved populations	Yes	Department of Social Services, One Stop Career Center, Health Department, Department of the Aging, Department of Community Services, Veterans Service Agency, Youth Bureau
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	Yes	Facebook, Everbridge, NY Alert, IPAWS, Press Release

2.3.6 Community Classifications

Table 2-7 summarizes classifications for community programs available to Cattaraugus County.

Table 2-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	Yes	County	August 2019
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

2.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 2-8 summarizes the adaptive capacity for each identified hazard of concern and the County’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 2-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Weather	Moderate
Utility Interruption	Moderate
Wildfire	Moderate

2.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 2-1 is responsible for maintaining this information.

2.4.1 NFIP Statistics

Table 2-9 summarizes the NFIP policy and claim statistics for Cattaraugus County.

Table 2-9. Cattaraugus NFIP Summary of Policy and Claim Statistics

# Policies	419
# Claims (Losses)	858
Total Loss Payments	\$6,595,974.77
# Repetitive Loss Properties (NFIP definition)	82
# Repetitive Loss Properties (FMA definition)	2
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

2.4.2 Flood Vulnerability Summary

Table 2-10 provides a summary of the NFIP program in Cattaraugus County.

Table 2-10. NFIP Summary

NFIP Topic	Comments
Floodplain Administration is conducted at the local municipal level.	

2.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 2-11 through Table 2-13.

Table 2-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	44	4	63	116
Permits within SFHA	1	0	0	1
2020				
Total Permits	43	1	71	122
Permits within SFHA	0	0	2	2
2021				
Total Permits	50	4	72	133
Permits within SFHA	1	0	0	1
2022				
Total Permits	64	5	47	129
Permits within SFHA	1	1	1	3
2023				
Total Permits	62	2	60	138
Permits within SFHA	1	0	0	1
2024				
Total Permits	21	0	1	22
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Note: Refer to Volume II, Chapters 3-45 for building permits issued in each local jurisdiction.

Due to old filing systems, specific permitting types are unavailable in some jurisdictions and only total permits issued were known.

Table 2-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
Invenergy	Commercial	1	407 Zimmer Road	None	Office & Storage
Edelweiss Farms	Agriculture	4	10826 Osmun Road	None	Farming
Invenergy Windmills	Commercial	27	Location in Freedom	None	Wind Energy
Great Lakes Cheese	Manufacturing	1	1958 Integrity Way, Franklinville, NY 14737	None	To be completed 2025
Vollentine Culverts	Infrastructure	3	Vollentine Road	Flood	Installed 1 – 6-foot culvert, 2 – 7-foot culverts

Note: Refer to Volume II, Chapters 3-45 for recent major development and infrastructure in each local jurisdiction.

Table 2-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
US Army Corps – Thatcher Brook bypass channel	Natural Infrastructure	1	Parallel from north side of railroad tracks from Thatcher Brook to Cattaraugus Creek	Flood	In the study phase, scheduled for construction to begin early 2027
Schwab Transport	Commercial	1	10064 Pigeon Hill Road	None	Office/workshop
Fox Road Culvert	Infrastructure	1	Fox Road	Flood	Need to install 1 6-foot culvert
Corbett Hill Road Ditch Bank	Infrastructure	1	Corbett Hill Road	Flood/Erosion	Need to install rip rap on ditch banks
Solar Farm	Industrial	2 farms	Broadway Road	None	2 solar farms with a combined 33 acres. Not permitted yet.
North Otto Road	Storm sewer Drainage	1	CR12 going North 900 feet	Poor drainage, water crossing road, freezes in winter	Cattaraugus County Road and job
Wind Farm	Industrial	1	Unknown	None	Leases being acquired but construction not started
Solar Farms	Industrial	3	Unknown	None	Application process begun but construction not started

Note: Refer to Volume II, Chapters 3-45 for anticipated major development and infrastructure in each local jurisdiction.

2.6 JURISDICTIONAL RISK ASSESSMENT

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Cattaraugus County's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

2.6.1 Hazard Area

The hazard profiles in Volume 1, Chapter 6 through Chapter 13 provide detailed information regarding each plan participant's vulnerability to the identified hazards. Chapter 4 (Methodology) and Chapter 14 (Hazard Ranking) provide detailed summaries for the County of Cattaraugus's risk assessment results and data used to determine the hazard ranking discussed later in this section.

Hazard area extent and location maps provided in the jurisdictional annexes illustrate the probable areas impacted within the jurisdiction based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps were generated only for those hazards that can be identified clearly using mapping techniques and technologies and for which the County of Cattaraugus has significant exposure. The maps also show the location of potential new development, where available.

2.6.2 Hazard Event History

The history of natural and non-natural hazard events in Cattaraugus County is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 2-14 provides details on loss and damage in Cattaraugus County during hazard events since the last hazard mitigation plan update.

Table 2-14. Hazard Event History in Cattaraugus County

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Cattaraugus County
October 31- November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	No damages or losses incurred to the County.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	\$4,869,444.51 was submitted to FEMA and \$4,145,841.72 was actually approved. We are submitting about \$200,000 for CAT Z
January 12, 2020	High Wind	N/A	High wind	No damages or losses incurred to the County.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	No damages or losses incurred to the County.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	No damages or losses incurred to the County.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	No damages or losses incurred to the County.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	No damages or losses incurred to the County.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	No damages or losses incurred to the County.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	No damages or losses incurred to the County.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	No damages or losses incurred to the County.
March 6, 2022	High Wind	N/A	High wind	No damages or losses incurred to the County.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	No damages or losses incurred to the County.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	Additional snow removal needs.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

2.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Cattaraugus County.

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Cattaraugus reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the County indicated the following:

- The Dam and Levee Failure hazard was decreased from 'Medium' to 'Low' as all County dams are maintained and inspected on an annual basis by NRCS, NYS DEC, and Cattaraugus County Soil & Water Conservation District. There have been no areas of concern regarding dam or levee failure based on these inspections.
- The Wildfire hazard was decreased from 'Medium' to 'Low' as there is ample adaptive capacity within Cattaraugus County fire districts to address wildfire hazards.

Table 2-15 shows Cattaraugus's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 2-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Low
Flood	Medium
Landslide	Medium
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Low

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 2-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 2-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Refer to Volume II, Chapters 3-45 for critical facilities across the County.					

Source: Cattaraugus County 2024

In addition to critical facilities that are exposed to flooding, the following high hazard dams are located in Cattaraugus County:

- Conewango Creek Site 1 Dam (Town of Randolph)
- Conewango Creek Site 16 Dam (Town of Napoli)
- Conewango Creek Site 16a Dam (Town of Conewango)
- Conewango Creek Site 19 Dam (Town of Randolph)
- Harwood Lake Dam (Town of Farmersville)
- Holimont Upper Reservoir Dam (Town of Mansfield)
- Ischua Creek Watershed Dam #1 (Town of Machias)
- Ischua Creek Watershed Dam #2 (Town of Farmersville)
- Ischua Creek Watershed Dam #4 (Town of Franklinville)
- Ischua Creek Watershed Dam #5 (Town of Lyndon)
- Ischua Creek Watershed Dam #6a (Town of Franklinville)
- Tannenbaum Reservoir Dam (Town of Ellicottville)

2.6.4 Identified Issues

After a review of Cattaraugus County's hazard event history, hazard rankings, hazard location, and current capabilities, Cattaraugus County identified the following vulnerabilities within the community:

- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in the County which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:
 - CR05/Mosher Hollow Road (Town of New Albion, Town of Leon – “Kendall’s Corners”)
 - CR05/Mosher Hollow Road (Town of Dayton – near intersection of State Route 353 & CR05)
 - CR26/Gile Hollow Road (Town of Hinsdale)
 - CR27/Haskell Road (Town of Portville)
 - CR44/Flat Iron Road (Town of Conewango)
 - CR60/West River Road (Town of Allegany)
 - CR69/Cadiz Road (Town of Franklinville)

- Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the County are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters including culverts.
- There are 12 high hazard potential dams in the County which have the potential to impact the people, property, infrastructure, and environment nearby. These dams, listed below, are located in nine of the County's local jurisdictions. In addition, there are two high hazard potential dams located outside of Cattaraugus County (Cuba Lake Dam in neighboring Allegany County and Springville Dam in Erie County) which have the potential to impact its local jurisdictions.
 - Conewango Creek Site 1 Dam (Town of Randolph)
 - Conewango Creek Site 16 Dam (Town of Napoli)
 - Conewango Creek Site 16a Dam (Town of Conewango)
 - Conewango Creek Site 19 Dam (Town of Randolph)
 - Harwood Lake Dam (Town of Farmersville)
 - Holimont Upper Reservoir Dam (Town of Mansfield)
 - Ischua Creek Watershed Dam #1 (Town of Machias)
 - Ischua Creek Watershed Dam #2 (Town of Farmersville)
 - Ischua Creek Watershed Dam #4 (Town of Franklinville)
 - Ischua Creek Watershed Dam #5 (Town of Lyndon)
 - Ischua Creek Watershed Dam #6a (Town of Franklinville)
 - Tannenbaum Reservoir Dam (Town of Ellicottville)
- In addition to the 12 high hazard potential dams within the County, there are 14 intermediate hazard dams, which have the potential to impact the people, property, infrastructure, and environment nearby. These dams, listed below, are located in ten of the County's local jurisdictions. In addition, there are two high hazard potential dams located outside of Cattaraugus County (Cuba Lake Spillway Dam in neighboring Allegany County and Conewango Creek Site 6 Dam in Chautauqua County) which have the potential to impact its local jurisdictions.
 - Lime Lake Outlet Dam (Town of Machias)
 - Rainbow Lake Dam (Town of East Otto)
 - Quaker Run Dam (Town of Coldspring)
 - Cabic Pond Dam (Town of New Albion)
 - Efner Davis Pond Dam (Town of Machias)
 - Conewango Creek Site 13 Dam (Town of New Albion)
 - Ischua Creek Watershed Dam #3 (Town of Farmersville)
 - William O Nannen Pond Dam (Village of Ellicottville)
 - Camp Chautauqua Pond Dam (Town of Randolph)
 - Sunset Saddle Dam (Town of Ellicottville)
 - Red House Lake Dam (Town of Red House)
 - Rotary Lake Dam (Town of Freedom)

- Edgar Ploetz Recreational Pond Dam (Town of Ellicottville)
- Richard Weishan Pond Dam (Town of East Otto)
- Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. There are 82 repetitive loss properties across the County, but other properties may be impacted by flooding. The County has identified the following locations that would be good candidates for targeting mitigation:
 - East Otto: Hammond Hill, 13 homes/cottages
 - Ashford Triangle: three (3) houses total
 - Little Valley: one (1) home
 - Coldspring: one (1) home
- Properties located within a triangular parcel of land, known as the Ashford Triangle, bordered by White Street, County Road No. 53, and County Road No. 32 in the Town of Ashford, NY, Cattaraugus County have experienced repetitive damage due to flood events (Tax parcel nos. 29.011-2-28.2, 29.011-2-28.1, and 29.011-2-30).
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The County does not have an inventory of roads which may be impacted by landslides.
- Power and communications outages put the public and critical facilities at risk. OES and Sheriff's office have worked to improve communications throughout the County, including radio system updates, integration of digital communication technology, and coordination with municipalities to incorporate early warning systems. Additionally, backup generators were installed or upgraded at all remote communications sites.
- The County has a comprehensive education and outreach program which addresses all identified hazards of concern; however, the information should be updated to include mitigation strategies to reduce long-term risk to the general public and properties. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods.
- Development in the floodplain can increase risk to property and life. Flooding events have resulted in damages to residential and commercial properties. Restricting development in floodplains reduces the risk of future damages.
- The County faces significant risk from the flood hazard; however, there is no warning system in place to detect when waters are breaching banks and to notify the public of the impending hazard. Flood waters can cause negative impacts to private and public property, close routes for travel and evacuation, and have the potential to cause health risks due to contaminated waters and debris. Flash floods are a rapid rise of water along a stream or low-lying urban area. They occur within a few minutes or hours of excessive rainfall, a dam or levee failure, or a sudden release of water held by an ice jam. With such limited time for response, flood gauging is necessary for adequate warning.
- Randolph Highway Barn, Allegany Transfer Station, and Portville Transfer Station are located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.
- Critical facilities require backup power to ensure continuity of operations. The Highway Barns require backup power: Markhams (100 kw); Randolph (100 kw); West Valley (100 kw), currently have unsustainable, portable generators, but require automatic, fixed units in order to produce energy supply to ensure continuity of operations in the event of a utility or power failure; the Board of Elections facility (207 Rock City Street, Little Valley) does not have any current source of back-up power. High winds associated

with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.

- A dam and/or levee failure is considered a low frequency event, meaning the likelihood of a failure is low; however, should a failure occur, the consequences could be high. Because of the low probability of occurrence, training for such events is uncommon and often not conducted. Emergency drills for low frequency events such as dam and/or levee failure must occur so first responders are aware of the procedures to follow and how to mitigate any identified gaps in their training. Conducting these trainings in collaboration with dam and/or levee owners can also make the owners aware of any vulnerabilities their infrastructure may have.
- FIRMs are outdated and may not accurately display flood risk. Inaccurate flood maps can misinform the public of actual flood risk and may prevent interested homeowners from receiving or applying for flood insurance. Correctly displaying the areas at risk to the flood hazard is not only critical to visually show the risk, but to support grant applications for funding to mitigate the flood risk at identified locations within or around the floodplain.
- Local jurisdictional Comprehensive Emergency Management Plans (CEMPs) may be outdated and do not incorporate hazard mitigation principles. Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- Scour on several County bridges has developed due to erosion. This erosion may have occurred due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may have caused flooding conditions to further erode the structure of the bridge. The following bridges should be evaluated to determine useability and to identify potential solutions:
 - Conewango 06
 - Conewango 14
 - Ellicottville 49
 - East Otto 12
 - East Otto 23
 - Farmersville 05
 - Farmersville 25
 - Freedom 25
 - Leon 36
 - Little Valley 06
 - Lyndon 03
 - Mansfield 12
 - Mansfield 37
 - Mansfield 51
 - Mansfield 62
 - Napoli 08
 - Otto 03
 - Otto 04

- South Valley 04
- South Valley 05
- South Valley 08
- Yorkshire 20
- Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. Local jurisdictions need to identify locations for the placement of temporary sheltering.
- Seneca Nation of Indians has territorial lands within Cattaraugus County, therefore hazards within Cattaraugus County, including all the hazards identified within this plan, may also impact Tribal lands. Increasing communications across entities can reduce hazard risk on shared lands.

2.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

2.7.1 Past Mitigation Action Status

Table 2-17 indicates progress on the County's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

2.7.2 Additional Mitigation Efforts

In addition to the mitigation actions completed in Table 2-17, Cattaraugus identified the following mitigation efforts completed since the last HMP:

- County Road No. 32 (West Valley Road) Ashford Slide Slope Failure – HMGP 4567-0015 Geotechnical engineering study

Since the adoption of the County's first HMP, Cattaraugus has made significant mitigation progress in the following areas:

- Various culvert replacement and hydraulic upsizing throughout the County have been accomplished and further planned for future action. To date, an HMGP acquisition project has been successfully complete, wherein two (2) flood-prone properties were removed from the 100-year flood plain (HMGP 4397-0005). Additionally, two (2) hazard mitigation projects are approved and in progress: HMGP 4480-0053 (New Albion Lake Culvert Replacement) and HMGP 4480-0067 (New Albion Culvert No. 27).
- The County has made progress identifying poor soils and landslides within the Cattaraugus Creek basin, including areas within the Towns of Perrysburg, Persia, Otto, East Otto, Ashford, Yorkshire, and New Albion. It is the intent to identify areas of poor soils and provide additional guidance regarding development within these areas.

DRAFT

Table 2-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Cattaraugus County-001	Develop emergency communications plans and emergency power backup plans.	All Hazards	County OES	<p>Problem: Power and communications outages put the public and critical facilities at risk.</p> <p>Solution: Continue to work with critical facilities to develop emergency communications plans and emergency power backup plans. The County will also work to update potential emergency sheltering options.</p>	<p>1. In Progress</p> <p>2. OES and Sheriff's office continue to improve communications throughout the County, to include radio system updates, integration of digital communication technology, and coordination with municipalities to incorporate early warning systems. Additionally, backup generators were installed or upgraded at all remote communications sites (Sheriff's Department).</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Cattaraugus County-002	Continuous Public Education	All Hazards	County EDPT	<p>Problem: Need to enhance public education and outreach</p> <p>Solution: Continuous Public Education – This will be done via pamphlets and website resources and include such information as: evacuation centers, supplies to have on hand, listing of emergency telephone numbers, storm drain maintenance procedures.</p>	<p>1. In Progress</p> <p>2. OES distributes information at the Cattaraugus County fair. EDPT aids in posting information on the County website. Information needs to be updated.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Cattaraugus County-003	Smart Growth	Flood	County EDPT	<p>Problem: Development in the floodplain can increase risk to property and life.</p>	<p>1. In Progress</p> <p>2. New County/community flood maps are in the</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				Solution: Educate municipalities on “Smart Growth” practices in the floodplains.	process of being developed by FEMA Region 2	
2020-Cattaraugus County-004	Evaluate areas that need a flood warning system constructed.	Flood	County OES	Problem: Flash flooding, limited time; flood gauging is necessary for adequate warning. Solution: Evaluate areas that need a flood warning system constructed. Pursue development of a flood warning system.	1. In progress 2. Additional rain gauges have been added to the Allegheny River at Red House and to Thatcher Brook	1. Include 2. Not applicable 3. Not applicable
2020-Cattaraugus County-005	Replace and Upsize Undersized Culverts	Flood, Severe Storm	County DPW	Problem: The county has identified numerous culverts that require upsizing. Undersized culverts are prone to damages and contribute to flooding Solution: The county will work to upsize the identified culverts during replacement.	1. In Progress 2. Identification of culverts is continuing, with plans to upsize.	1. Include 2. Not applicable 3. Not applicable
2020-Cattaraugus County-006	Implement/Encourage training for Code Enforcement Officers.	Flood	County DPW	Problem: Officials responsible for floodplain management would benefit greatly from training opportunities. Very little zoning precludes homeowners from building in floodplains, leading to problems later. Solution: Obtain/host specialist training and certification for floodplain managers.	1. Discontinue 2. The County does not have oversight nor any coordination authority with regard to local code enforcement or code enforcement programs. This educational enrichment is needed in this area but should be transferred to the New York State Department of State, Building Standards and Codes.	1. Discontinue 2. Not applicable 3. The County does not have oversight nor any coordination authority with regard to local code enforcement or code enforcement programs. This educational enrichment is needed in this area but should be transferred to the New York State Department of State, Building Standards and Codes.

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. 2020-Cattaraugus County-007	Residential Property Flood Mitigation.	Flood	County DPW Mun. NFIP Flood-plain Administrator, supported by homeowners	<p>Problem: Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The county has identified the following locations that would be good candidates for targeting mitigation.:</p> <ul style="list-style-type: none"> • East Otto: Hammond Hill, 13 homes/cottages – flood • Ashford Triangle: two (2) locations, five (5) houses total – flood • Little Valley: one (1) home – flood • Coldspring: one (1) home – County <p>Solution: The county will work with towns to conduct outreach to flood-prone property owners, including RL/SRL property owners and provide information regarding mitigation alternatives. After preferred mitigation measures are identified, the county will collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/ purchase/ moving/ elevating residential homes in the flood prone areas that experience frequent flooding (high risk areas).</p>	<p>1. In progress/completed 2. East Otto – in progress Ashford Triangle – Cattaraugus County Soil & Water Conservation District will be researching grant opportunities in coordination with DPW to engage a consultant for engineering feasibility study for solutions to this highly flood-prone, long-standing vulnerable area. This is related specifically to the triangle vicinity. Two (2) of the five (5) properties in this problem area were acquired and structures removed as part of HMGP 4397-0005. Little Valley – ongoing Coldspring – ongoing</p>	<p>1. Include 2. Please see adjusted wording to Ashford triangle 3. Not applicable</p>
2020-Cattaraugus County-008	Landslide Mitigation	Landslide	County DPW	<p>Problem: The county has identified numerous homes that would benefit from buyout due to landslide risk.</p> <ul style="list-style-type: none"> • Village of Cattaraugus: 20 homes – landslide • Yorkshire: two (2) homes – landslide 	<p>1. Discontinue 2. These residential areas/identification of these properties should be referred to local municipal jurisdictional oversight.</p>	<p>1. Discontinue 2. Not applicable 3. These residential areas/identification of these properties should be referred to local municipal</p>

2. County of Cattaraugus

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				Solution: The county will work with local towns and villages to identify property owners that may be interested in buyout due to landslide risk and assist with grant applications.	The County cannot assist in projects not impacting County infrastructure; however, would support municipal efforts to mitigate these hazards. That said, the County should not be the origin point for municipalities' applications.	jurisdictional oversight. The County cannot assist in projects not impacting County infrastructure; however, would support municipal efforts to mitigate these hazards. That said, the County should not be the origin point for municipalities' applications.
2020-Cattaraugus County-009	Critical Facility Flood Protection	Flood	County DPW	<p>Problem: Randolph Highway Barn, Allegany Transfer Station, and Portville Transfer Station are exposed to flooding.</p> <p>Solution: The County will facilitate a feasibility assessment to determine the most appropriate mitigation action to protect critical facilities to the 500-year flood level. Options include:</p> <ul style="list-style-type: none"> • Elevation of facility • Flood-proofing of facility • Mobile flood barriers <p>Once the most cost-effective option is identified, the county will carry out that option.</p>	<p>1. In progress</p> <p>2. Feasibility study in the process of beginning.</p>	<p>1. Include</p> <p>2. Add fourth option to be considered/studied, under "mobile flood barriers": add "relocation."</p> <p>3. Not applicable</p>
2020-Cattaraugus County-010	Highway Barns Backup Power	Utility Failure	County DPW	<p>Problem: Backup power sources are necessary to maintain critical services for critical facilities. The following Highway Barns require backup power: Markhams (100 kw); Randolph (100 kw); West Valley (100 kw).</p> <p>Solution: The County will purchase and install the backup power generators and necessary</p>	<p>1. In progress</p> <p>2. Financial constraints</p>	<p>1. In progress</p> <p>2. Markhams, Randolph, and West Valley do have generators, but they are portable. They need to be upgraded to automatic, fixed units.</p> <p>3. Not applicable</p>

2. County of Cattaraugus

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				electrical components at the identified facilities.		
2020-Cattaraugus County-011	Investigate a Tree Maintenance program to identify susceptible trees.	Severe Storm, Severe Winter Storm, Ice Storm, Utility Interruption	County DPW	<p>Problem: The County does not have a tree trimming program in place. It is unknown the safety of trees throughout the county. During wind events or heavy snow, falling tree branches can damage utilities and private property.</p> <p>Solution: The County will develop a tree trimming maintenance program. The program will include conducting tree inventories and working with utility companies to determine which trees may pose a threat in the event of a storm. Once identified, the County will perform or hire a contractor to perform needed work to remove or maintain high-risk trees.</p>	<p>1. Discontinue</p> <p>2. The County addresses routine tree maintenance as part of a robust annual Highway maintenance program. This is an action that does not need to be uniquely identified as the work is encumbered in DPW's regular activities.</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. The County addresses routine tree maintenance as part of a robust annual Highway maintenance program. This is an action that does not need to be uniquely identified as the work is encumbered in DPW's regular activities.</p>
2020-Cattaraugus County-012	Develop educational training for Municipal Code Enforcement Officers.	All Hazards	County DPW	<p>Problem: There is a lack of training regarding incorporation of hazard mitigation concepts.</p> <p>Solution: The County will conduct training for Municipal Code Enforcement Officers and identify trainings available from state and private organizations.</p>	<p>1. Discontinue</p> <p>2. The County does not have oversight nor any coordination authority with regard to local code enforcement or code enforcement programs. This educational enrichment is needed in this area but should be transferred to the New York State Department of State, Building Standards and Codes.</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. The County does not have oversight nor any coordination authority with regard to local code enforcement or code enforcement programs. This educational enrichment is needed in this area but should be transferred to the New York State Department of State, Building Standards and Codes.</p>

2. County of Cattaraugus

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Cattaraugus County-013	Stream Clearing	Flood, Severe Storm	County DPW Municipality/Private	Problem: Streams that clog with debris can contribute to flooding. Solution: The county will conduct stream clearing and provide assistance to local municipalities to maintain local waterways.	1. Discontinue 2. The County addresses routine streambank and debris maintenance as part of a robust annual Highway maintenance program. This is an action that does not need to be uniquely identified as the work is encumbered in DPW's regular activities. Additionally, the County regularly engages in shared services with all municipal jurisdictions throughout the year.	1. Discontinue 2. Not applicable 3. The County addresses routine streambank and debris maintenance as part of a robust annual Highway maintenance program. This is an action that does not need to be uniquely identified as the work is encumbered in DPW's regular activities. Additionally, the County regularly engages in shared services with all municipal jurisdictions throughout the year.
2020-Cattaraugus County-014	Conduct emergency drills.	All Hazards	County OES	Problem: Emergency drills need to be conducted, specifically for low frequency events such as dam failure. Solution: The County will conduct emergency drills.	1. In progress 2. Emergency services and the Department of Public Works continue to participate in drills for dam failure	1. Include 2. Not applicable 3. Not applicable
2020-Cattaraugus County-015	Protect County Dams to the 500-year Flood Level	Flood	County DPW	Problem: Numerous dams are located in Cattaraugus County. Ischua Creek Watershed Dam #1, Ischua Creek Watershed Dam #4, Ischua Creek Watershed Dam #6a, Point Peter Dam, Cabic Pond Dam, and Conewango Creek Site 19 Dam are identified as being located in the Special Flood Hazard Area. Solution: The county will contact the facility managers of privately owned dams and	1. Discontinue 2. The County already has a dam safety program through NRCS. All dams are regularly inspected per NYSDEC standard, as well. Protection elements are identified through routine inspection and actions taken as needed.	1. Discontinue 2. Not applicable 3. The County already has a dam safety program through NRCS. All dams are regularly inspected per NYSDEC standard, as well. Protection elements are identified through routine inspection and actions taken as needed.

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				discuss options for protecting the dams to the 500-year flood level. For county owned dams, the County DPW will survey the dams to determine what protections are necessary and carry out the necessary upgrades.		
2020-Cattaraugus County-016	Countywide FIRM Update	Flood	County DPW, Flood-plain Administrators, FEMA	Problem: Best available flood mapping is needed. Solution: The county will work with FEMA to update flood hazard mapping	1. In progress 2. FEMA Region 2 continues to update FIRM maps for the County (including digital access development)	1. Include 2. Not applicable 3. Not applicable
2020-Cattaraugus County-017	Incorporate disaster mitigation into comprehensive plans	All Hazards	County EDPT and local municipal agencies	Problem: Comprehensive plans need to incorporate disaster mitigation Solution: Ensure that local comprehensive plans incorporate disaster mitigation techniques through a courtesy review of all draft plans by EDPT (County).	1. In progress 2. OES continues to work with municipalities to update their respective comprehensive plans	1. Include 2. Not applicable 3. Not applicable
2020-Cattaraugus County-018	Identify and monitor bridges for scouring	Flood	County DPW	Problem: Scouring of bridges can result in bridge failure. Solution: The County will identify and monitor bridges for scouring and work to identify funding sources to support mitigation to control scouring.	1. In progress 2. Funding constraints	1. Include 2. Not applicable 3. Not applicable
2020-Cattaraugus County-019	Identification of Temporary and Permanent Housing Locations	All Hazards	Administration	Problem: Municipalities in the county need to identify locations for the placement of temporary housing and permanent housing. Solution: The county will work with local municipalities to identify regional locations for temporary and permanent housing.	1. In progress 2. County and jurisdictional priorities focused elsewhere.	1. Include 2. Alter to temporary sheltering 3. Not applicable

2. County of Cattaraugus

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Cattaraugus County-020	NFIP Technical Assistance	Flood	County DPW	<p>Problem: Administration of municipal flood damage prevention/floodplain management programs across the county may not sufficiently address flood risk and NFIP compliance requirements.</p> <p>Solution: County staff will be made available to review each municipality's floodplain administration regulations, permitting practices, compliance history, etc. and work with municipal FPAs to identify enhancements that can be made to ensure continued municipal compliance with the NFIP.</p>	<p>1. Discontinue</p> <p>2. The County does not have oversight nor any coordination authority with regard to municipal flood damage prevention/floodplain management programs.</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. The County does not have oversight nor any coordination authority with regard to municipal flood damage prevention/floodplain management programs.</p>
2020-Cattaraugus County-021	Board of Elections Backup Power	Utility Failure	County DPW	<p>Problem: Backup power sources are necessary to maintain critical services for critical facilities. The Board of Elections facility at 207 Rock City Street in Little Valley requires backup power.</p> <p>Solution: The County will purchase and install a backup power generator and necessary electrical components at the Board of Elections facility.</p>	<p>1. No Progress</p> <p>2. Financial constraints</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Cattaraugus County-022	Ashford Triangle Acquisition Project	Flooding; Severe Storm; Utility Interruption	DPW	<p>Problem: Properties located within a triangular parcel of land bordered by White Street, County Road No. 53, and County Road No. 32 in the Town of Ashford, NY, Cattaraugus County have experienced repetitive damage due to flood events (Tax parcel nos. 29.011-2-28.2, 29.011-2-28.1, and 29.011-2-30).</p>	<p>1. No Progress</p> <p>2. There seems to be a lack of interest from the property owners involved regarding voluntary acquisition of their residential parcels. However, Cattaraugus County Soil & Water</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

2. County of Cattaraugus

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				Solution: Acquire the three (3) residences, demolish the existing structures and turn into green space.	Conservation District and DPW will coordinate efforts to solicit grant funding for a feasibility study to better assess mitigation strategies in this area.	
2020-Cattaraugus County-023	Ashford Property Acquisition Project	Flooding; Severe Storm; Utility Interruption	DPW	<p>Problem: Properties located off of County Road No. 32 in the Town of Ashford, NY, Cattaraugus County have experienced repetitive damage due to flood events (Tax parcel nos. 29.002-1-26.2 & 29.011-2-21).</p> <p>Solution: Acquire the two (2) residences, demolish the existing structures and turn into green space.</p>	<p>1. Complete</p> <p>2. Project complete with funding through HMGP 4397-0005.</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. Project complete with funding through HMGP 4397-0005.</p>

2.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Cattaraugus County participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 "Selecting Appropriate Mitigation Measures for Floodprone Structures" (March 2007)
- FEMA "Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards" (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Cattaraugus County would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in County priorities.

Table 2-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 2-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 2-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X			X	X		X			X
Flood	X	X		X	X	X	X		X	X
Landslide	X			X	X		X			X
Pandemic	X			X	X		X			X
Severe Storm	X	X		X	X		X		X	X
Severe Winter Storm	X	X		X	X		X		X	X
Utility Failure	X	X		X	X		X		X	X
Wildfire	X			X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 2-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-CattaraugusCo-01. Floodprone Roads

Lead Agency:	Cattaraugus County Engineering						
Supporting Agencies:	Cattaraugus County Public Works						
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire						
Description of the Problem:	<p>Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in the County which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:</p> <ul style="list-style-type: none">• CR05/Mosher Hollow Road (Town of New Albion, Town of Leon – “Kendall’s Corners”)• CR05/Mosher Hollow Road (Town of Dayton – near intersection of State Route 353 & CR05)• CR26/Gile Hollow Road (Town of Hinsdale)• CR27/Haskell Road (Town of Portville)• CR44/Flat Iron Road (Town of Conewango)• CR60/West River Road (Town of Allegany)• CR69/Cadiz Road (Town of Franklinville)						
Description of the Solution:	<p>The County will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include:</p> <ul style="list-style-type: none">• Elevation of roadways• Installation or improvement of drainage systems• Regrading of roadway and soils• Resurfacing or reshaping roadways						
Estimated Cost:	TBD after mitigation technique is chosen						
Potential Funding Sources:	FEMA HMA, County Budget, CHIPS						
Implementation Timeline:	Within 5 years						
Goals Met:	1						
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.						
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.						
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.						
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.						
Impact on Capabilities:	This action improves the County’s reliability in terms of transportation.						
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.						
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

2. County of Cattaraugus

	Relocate all flood-prone road system	Not feasible
	Raise all flood prone roads	Cost prohibitive

DRAFT

Action 2025-CattaraugusCo-02. Undersized Culverts

Lead Agency:	Cattaraugus County Engineering		
Supporting Agencies:	Cattaraugus County Public Works		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the County are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters including culverts.		
Description of the Solution:	The County Engineer will complete an engineering survey of the culverts in the County that are undersized and contribute to flooding to determine the proper size necessary to provide stormwater capacity. Public Works will complete the necessary upsizing for the culverts.		
Estimated Cost:	TBD after study is complete		
Potential Funding Sources:	FEMA HMA, CHIPS, County Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.		
Impact on Capabilities:	Identifying the culverts that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes culvert sizes to meet changing stormwater needs as the result of climate change.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action	Evaluation	
	No Action	Current problem exists	
	Remove roadway	Roadway cannot be removed	
	Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.	

Action 2025-CattaraugusCo-03. High Hazard Potential Dams

Lead Agency:	Cattaraugus County Public Works	
Supporting Agencies:	NYS DEC, Dam Owners, Town of Randolph, Town of Napoli, Town of Conewango, Town of Farmersville, Town of Mansfield, Town of Machias, Town of Franklinville, Town of Lyndon, Town of Ellicottville, Allegany County, Erie County	
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	<p>There are 12 high hazard potential dams in the County which have the potential to impact the people, property, infrastructure, and environment nearby. These dams, listed below, are located in nine of the County's local jurisdictions. In addition, there are two high hazard potential dams located outside of Cattaraugus County (Cuba Lake Dam in neighboring Allegany County and Springville Dam in Erie County) which have the potential to impact its local jurisdictions.</p> <ul style="list-style-type: none">• Conewango Creek Site 1 Dam (Town of Randolph)• Conewango Creek Site 16 Dam (Town of Napoli)• Conewango Creek Site 16a Dam (Town of Conewango)• Conewango Creek Site 19 Dam (Town of Randolph)• Harwood Lake Dam (Town of Farmersville)• Holimont Upper Reservoir Dam (Town of Mansfield)• Ischua Creek Watershed Dam #1 (Town of Machias)• Ischua Creek Watershed Dam #2 (Town of Farmersville)• Ischua Creek Watershed Dam #4 (Town of Franklinville)• Ischua Creek Watershed Dam #5 (Town of Lyndon)• Ischua Creek Watershed Dam #6a (Town of Franklinville)• Tannenbaum Reservoir Dam (Town of Ellicottville)	
Description of the Solution:	The County will work with local jurisdictions to contact the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.	
Estimated Cost:	Low	
Potential Funding Sources:	County Budget, Local Jurisdiction Budgets, Dam Owners	
Implementation Timeline:	Within 5 years	
Goals Met:	1, 2, 3, 7	
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.	
Impact on Socially Vulnerable Populations:	The action will result in better preparedness for those living near areas where the dams are located.	
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.	
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.	
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.	
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.	
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	

CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)		<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	ction		Evaluation
	No Action		Current problem persists
	Utilize information from NYS DEC		Owners may not be required to submit a safety plan to the State
	Utilize information from the National Inventory of Dams		Not all dams are listed on the inventory

Action 2025-CattaraugusCo-04. Intermediate Hazard Potential Dams

Lead Agency:	Cattaraugus County Public Works
Supporting Agencies:	NYS DEC, Dam Owners, Town of Machias, Town of East Otto, Town of Coldspring, Town of New Albion, Town of Farmersville, Village of Ellicottville, Town of Ellicottville, Town of Randolph, Town of Red House, Town of Freedom, Allegany County, Chautauqua County
Hazard(s) of Concern:	<div><input checked="" type="checkbox"/> Dam and Levee Failure</div> <div><input type="checkbox"/> Flood</div> <div><input type="checkbox"/> Landslide</div> <div><input type="checkbox"/> Pandemic</div> <div><input type="checkbox"/> Severe Storm</div> <div><input type="checkbox"/> Severe Winter Storm</div> <div><input type="checkbox"/> Utility Failure</div> <div><input type="checkbox"/> Wildfire</div>
Description of the Problem:	<p>In addition to the 12 high hazard potential dams within the County, there are 14 intermediate hazard dams, which have the potential to impact the people, property, infrastructure, and environment nearby. These dams, listed below, are located in ten of the County's local jurisdictions. In addition, there are two high hazard potential dams located outside of Cattaraugus County (Cuba Lake Spillway Dam in neighboring Allegany County and Conewango Creek Site 6 Dam in Chautauqua County) which have the potential to impact its local jurisdictions.</p> <ul style="list-style-type: none">• Lime Lake Outlet Dam (Town of Machias)• Rainbow Lake Dam (Town of East Otto)• Quaker Run Dam (Town of Coldspring)• Cabic Pond Dam (Town of New Albion)• Efner Davis Pond Dam (Town of Machias)• Conewango Creek Site 13 Dam (Town of New Albion)• Ischua Creek Watershed Dam #3 (Town of Farmersville)• William O Nannen Pond Dam (Village of Ellicottville)• Camp Chautauqua Pond Dam (Town of Randolph)• Sunset Saddle Dam (Town of Ellicottville)• Red House Lake Dam (Town of Red House)• Rotary Lake Dam (Town of Freedom)• Edgar Ploetz Recreational Pond Dam (Town of Ellicottville)• Richard Weishan Pond Dam (Town of East Otto)
Description of the Solution:	The County will work with local jurisdictions to contact the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.
Estimated Cost:	Low
Potential Funding Sources:	County Budget, Local Jurisdiction Budgets, Dam Owners
Implementation Timeline:	Within 5 years
Goals Met:	1, 2, 3
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.
Impact on Socially Vulnerable Populations:	The action will result in better preparedness for those living near areas where the dams are located.
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.

Action 2025-CattaraugusCo-05. Repetitive Loss Properties

Lead Agency:	Cattaraugus County Public Works								
Supporting Agencies:	Local Jurisdiction Floodplain Administrators, Homeowners								
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire								
Description of the Problem:	<p>Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. There are 82 repetitive loss properties across the County, but other properties may be impacted by flooding. The County has identified the following locations that would be good candidates for targeting mitigation:</p> <ul style="list-style-type: none">• East Otto: Hammond Hill, 13 homes/cottages• Ashford Triangle: three (3) houses total• Little Valley: one (1) home• Coldspring: one (1) home								
Description of the Solution:	<p>The County will work with local jurisdictions to conduct outreach to the impacted properties and will provide information on mitigation alternatives. After preferred mitigation measures are identified, the Town will collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition, purchase, moving, elevating of the affected properties that experience frequent flooding. The parameters for this initiative would be funding, benefits versus cost, and willing participation of property owners.</p>								
Estimated Cost:	TBD depending on mitigation method								
Potential Funding Sources:	FEMA FMA, FMA SWIFT, Local Jurisdiction Budget, County Budget, Property Owners								
Implementation Timeline:	3 years								
Goals Met:	1								
Benefits:	<p>This action would foster comprehensive floodplain management by removing at risk properties from the flood hazard area or elevating properties to reduce the flood risk.</p>								
Impact on Socially Vulnerable Populations:	<p>Collecting data regarding homeowners that reside within flood prone areas provides an opportunity to introduce location-specific opportunities for assistance. Socially vulnerable populations may be able to have houses elevated or acquired when it would otherwise be unaffordable.</p>								
Impact on Future Development:	<p>Increased outreach to homeowners within a flood prone area will limit construction in areas that are prone to hazard events. Homes may be acquired, which will remove those structures from the floodplain and prevent future development on those sites.</p>								
Impact on Critical Facilities/Lifelines:	<p>Removing structures from the floodplain decreases the demand on utilities and emergency services including health and medical, law enforcement, and search and rescue.</p>								
Impact on Capabilities:	<p>Outreach which promotes the removal of risk from the immediate floodplain via acquisition of properties will free up resources for search and rescue and other emergency operations as needed. This action will enhance the NFIP capabilities of each local jurisdiction.</p>								
Climate Change Considerations:	<p>Climate change is likely to increase the frequency and severity of severe rainfall, flash flooding, and riverine flooding events. Removing structures from the floodplain will reduce the response and recovery costs as a result of these events and decrease the loss of human life as a result of these events. Elevating structures will reduce the recovery costs.</p>								
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

	Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.
--	---------------------------	--

DRAFT

Action 2025-CattaraugusCo-06. Ashford Triangle Flood Mitigation

Lead Agency:	Cattaraugus County Soil and Water Conservation District										
Supporting Agencies:	Cattaraugus County Public Works, Town of Ashford										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Properties located within a triangular parcel of land, known as the Ashford Triangle, bordered by White Street, County Road No. 53, and County Road No. 32 in the Town of Ashford, NY, Cattaraugus County have experienced repetitive damage due to flood events (Tax parcel nos. 29.011-2-28.2, 29.011-2-28.1, and 29.011-2-30).										
Description of the Solution:	Cattaraugus County Soil and Water Conservation District and Public Works will coordinate efforts to solicit grant funding for a feasibility study to better assess mitigation strategies in this area.										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, County Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action would foster comprehensive floodplain management by removing at risk properties from the flood hazard area or elevating properties to reduce the flood risk. This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may be able to have houses elevated or acquired when it would otherwise be unaffordable.										
Impact on Future Development:	Increased outreach to homeowners within a flood prone area will limit construction in areas that are prone to hazard events. Homes may be acquired, which will remove those structures from the floodplain and prevent future development on those sites.										
Impact on Critical Facilities/Lifelines:	Removing structures from the floodplain decreases the demand on utilities and emergency services including health and medical, law enforcement, and search and rescue. This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	Outreach which promotes the removal of risk from the immediate floodplain via acquisition of properties will free up resources for search and rescue and other emergency operations as needed. This action will enhance the NFIP capabilities of the Town of Ashford. This action improves the County's reliability in terms of transportation.										
Climate Change Considerations:	Climate change is likely to increase the frequency and severity of severe rainfall, flash flooding, and riverine flooding events. Removing structures from floodprone areas will reduce the response and recovery costs as a result of these events and decrease the loss of human life as a result of these events. Elevating structures will reduce the recovery costs.

Action	Evaluation										
No Action	Current problem exists										
Raise all flood prone roads	Cost prohibitive										
Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.										

Action 2025-CattaraugusCo-07. Landslide Prone Roads

Lead Agency:	Cattaraugus County Engineering										
Supporting Agencies:	Cattaraugus County Public Works										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The County does not have an inventory of roads which may be impacted by landslides.										
Description of the Solution:	The County Engineer will complete an assessment to identify roads in the County which have slopes at grades greater than 20 percent, and to identify areas where soils are soft and may have an increased vulnerability to the landslide hazard. Once identified, the Engineer will work with Public Works to prioritize roadways and identify possible mitigation measures. This study may also be used to identify locations where future development should not occur due to heightened risk of landslides.										
Estimated Cost:	Medium										
Potential Funding Sources:	County Budget										
Implementation Timeline:	3 years										
Goals Met:	1, 4, 6										
Benefits:	This action will identify locations with steep grades (above 20 percent) and soft soils and provide Engineering and Public Works with future locations to implement mitigation measures to protect any nearby property and infrastructure.										
Impact on Socially Vulnerable Populations:	This action may identify socially vulnerable populations whose properties may be at risk to the landslide hazard. If identified, the County may educate the populations on how to mitigate potential risks to these populations and their property.										
Impact on Future Development:	The identification of at-risk roads may lead to restrictions for future development.										
Impact on Critical Facilities/Lifelines:	This action has the potential to identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action may improve the County's regulatory capabilities.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>County will be unaware of any safety concerns for the dam or its condition</td> </tr> <tr> <td>Do not use inventory to inform the location of future development</td> <td>Would not restrict future development, could increase at risk properties and structures</td> </tr> <tr> <td>Do not use inventory to inform future projects</td> <td>Risk would not be reduced</td> </tr> </tbody> </table>	Action	Evaluation	No Action	County will be unaware of any safety concerns for the dam or its condition	Do not use inventory to inform the location of future development	Would not restrict future development, could increase at risk properties and structures	Do not use inventory to inform future projects	Risk would not be reduced		
Action	Evaluation										
No Action	County will be unaware of any safety concerns for the dam or its condition										
Do not use inventory to inform the location of future development	Would not restrict future development, could increase at risk properties and structures										
Do not use inventory to inform future projects	Risk would not be reduced										

Action 2025-CattaraugusCo-08. Emergency Planning

Lead Agency:	Cattaraugus County Office of Emergency Services										
Supporting Agencies:	Cattaraugus County Sheriff's Office, Facility Managers										
Hazard(s) of Concern:	<div><input type="checkbox"/> Dam and Levee Failure</div> <div><input type="checkbox"/> Flood</div> <div><input type="checkbox"/> Landslide</div> <div><input type="checkbox"/> Pandemic</div> <div><input type="checkbox"/> Severe Storm</div> <div><input type="checkbox"/> Severe Winter Storm</div> <div><input checked="" type="checkbox"/> Utility Failure</div> <div><input type="checkbox"/> Wildfire</div>										
Description of the Problem:	Power and communications outages put the public and critical facilities at risk. The Office of Emergency Services and Sheriff's Office have worked to improve communications throughout the County, including radio system updates, integration of digital communication technology, and coordination with local jurisdictions to incorporate early warning systems. Additionally, backup generators were installed or upgraded at all remote communications sites.										
Description of the Solution:	The Office of Emergency Services and the Sheriff's Office will continue to work with critical facilities to develop emergency communications plans and emergency power backup plans. The Office of Emergency Services will also work to update potential emergency sheltering options.										
Estimated Cost:	Medium										
Potential Funding Sources:	County Budget, Facility Budgets										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of critical facilities that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<div><input checked="" type="checkbox"/> Local Plans and Regulations (LPR)</div> <div><input type="checkbox"/> Structure and Infrastructure Project (SIP)</div> <div><input type="checkbox"/> Natural Systems Protection (NSP)</div> <div><input type="checkbox"/> Education and Awareness Programs (EAP)</div>										
CRS Category	<div><input type="checkbox"/> Preventative Measures (PR)</div> <div><input type="checkbox"/> Property Protection (PP)</div> <div><input type="checkbox"/> Public Information (PI)</div> <div><input type="checkbox"/> Natural Resource Protection (NR)</div> <div><input type="checkbox"/> Structural Flood Control Projects (SP)</div> <div><input checked="" type="checkbox"/> Emergency Services (ES)</div>

No Action	Current problem exists										
Have critical facilities perform their own assessments.	Assessments may miss key information.										
Have critical facilities write their own plans.	Plans may miss key information.										

Action 2025-CattaraugusCo-09. Comprehensive Outreach Program

Lead Agency:	Cattaraugus County Office of Emergency Services										
Supporting Agencies:	Local Jurisdictions, NYS DHSES										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The County has a comprehensive education and outreach program which addresses all identified hazards of concern; however, the information should be updated to include mitigation strategies to reduce long-term risk to the general public and properties. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods.										
Description of the Solution:	Create and update outreach materials, or utilize those from NYS DHSES, on hazard risks and methods of mitigation measures, including those for dam and levee failure, flood, landslide, pandemic, severe storm, severe winter storm, utility failure, and wildfire. Methods of distribution may include County events, the County newsletters, social media, the County website, and having the materials on display for the public at County libraries and offices. Outreach materials will be specified with education and information for each individual hazard of concern. Created and updated materials will be shared with local jurisdictions for their outreach programs.										
Estimated Cost:	Low										
Potential Funding Sources:	County Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the current public education and outreach program in the County by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the County.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the various hazards which may impact them in the County.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of potential hazards. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's already existing public education and outreach program.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from hazards and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the County</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the County	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the County										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-CattaraugusCo-10. Smart Growth Planning

Lead Agency:	Cattaraugus County Department of Economic Development, Planning and Tourism										
Supporting Agencies:	Local Jurisdictions										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Development in the floodplain can increase risk to property and life. Flooding events have resulted in damages to residential and commercial properties. Restricting development in floodplains reduces the risk of future damages.										
Description of the Solution:	Cattaraugus County Department of Economic Development, Planning and Tourism will educate local jurisdictions on "Smart Growth" practices in the floodplains and how to integrate these practices into local planning and regulatory.										
Estimated Cost:	Low										
Potential Funding Sources:	County Budget										
Implementation Timeline:	Within 2 years										
Goals Met:	1, 2, 4										
Benefits:	Smart growth practices are a range of development and conservation strategies that help protect the natural environment and make communities more attractive, livable, and economically vibrant.										
Impact on Socially Vulnerable Populations:	Smart growth practices can improve pedestrian and bicycle amenities, promote public transit, create a range of housing opportunities and choices, and foster distinctive, attractive communities with a strong sense of place, all of which can improve the living environment of the population.										
Impact on Future Development:	Smart growth practices can lessen the environmental impacts of development.										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	Smart growth practices can enhance local jurisdiction's planning and regulatory capabilities.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. Smart growth practices can assist in mitigating risks from hazards.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Local jurisdictions do not incorporate Smart Growth into plans</td> <td>Practices are not fully ingrained into capabilities</td> </tr> <tr> <td>Local jurisdictions do not incorporate Smart Growth into regulations</td> <td>Practices are not fully ingrained into capabilities</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Local jurisdictions do not incorporate Smart Growth into plans	Practices are not fully ingrained into capabilities	Local jurisdictions do not incorporate Smart Growth into regulations	Practices are not fully ingrained into capabilities		
Action	Evaluation										
No Action	Current problem exists

Local jurisdictions do not incorporate Smart Growth into regulations	Practices are not fully ingrained into capabilities										

Action 2025-CattaraugusCo-11. Flood Warning System

Lead Agency:	Cattaraugus County Office of Emergency Services										
Supporting Agencies:	NWS, USGS, Local Jurisdictions										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The County faces significant risk from the flood hazard; however, there is no warning system in place to detect when waters are breaching banks and to notify the public of the impending hazard. Flood waters can cause negative impacts to private and public property, close routes for travel and evacuation, and have the potential to cause health risks due to contaminated waters and debris. Flash floods are a rapid rise of water along a stream or low-lying urban area. They occur within a few minutes or hours of excessive rainfall, a dam or levee failure, or a sudden release of water held by an ice jam. With such limited time for response, flood gauging is necessary for adequate warning.										
Description of the Solution:	The County will evaluate areas that need a flood warning system constructed and construct the system where necessary. As needed, the County will consult with the National Weather Service (NWS) and the United States Geographical Survey (USGS) to identify appropriate areas for flood gauges.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, NWS, USGS, County Budget										
Implementation Timeline:	3 years										
Goals Met:	1, 4, 5, 6										
Benefits:	This action will improve the alert and warning capabilities of the County by being able to alert and notify the public, business owners, and visitors of potential or impending flooding conditions.										
Impact on Socially Vulnerable Populations:	Vulnerable populations who are impacted by flooding conditions would have an earlier warning of impending or possible flooding conditions.										
Impact on Future Development:	Not applicable.										
Impact on Critical Facilities/Lifelines:	Critical facilities and community lifelines which are impacted by flooding conditions would have an earlier warning of impending or possible flooding conditions.										
Impact on Capabilities:	This action would build upon the existing warning system capabilities of the County by expanding these capabilities to include a flood warning system.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. The projection for an increase in heavy rainfall events means there is a heightened chance of flooding events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on the NWS updates</td> <td>Do not provide real-time information, delay in information could impact the village on responding properly</td> </tr> <tr> <td>Conduct manual readings by emergency personnel</td> <td>Inaccurate and time consuming</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Rely on the NWS updates	Do not provide real-time information, delay in information could impact the village on responding properly	Conduct manual readings by emergency personnel	Inaccurate and time consuming		
Action	Evaluation										
No Action	Current problem exists										
Rely on the NWS updates	Do not provide real-time information, delay in information could impact the village on responding properly										
Conduct manual readings by emergency personnel	Inaccurate and time consuming										

Action 2025-CattaraugusCo-12. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers		
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Randolph Highway Barn, Allegany Transfer Station, and Portville Transfer Station are located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.		
Description of the Solution:	<p>The County will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none"> Elevation of facility Floodproofing of facility Mobile flood barriers Relocation of facility <p>Once the most cost-effective option is identified, the County will carry out the option.</p>		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, County Budget		
Implementation Timeline:	Within 5 Years		
Goals Met:	1, 3, 5		
Benefits:	Ensures continuity of operations of several critical facilities in the County.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.		
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.		
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.		
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.		
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Relocate all facilities		Relocation is expensive and results in loss or delay of critical services in the immediate area
	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events		Reduction in response times and delay of critical services in the immediate area.

Action 2025-CattaraugusCo-13. Generators at Critical Facilities

Lead Agency:	Cattaraugus County Engineering										
Supporting Agencies:	Cattaraugus County Public Works, Cattaraugus County Board of Elections										
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Highway Barns require backup power: Markhams (100 kw); Randolph (100 kw); West Valley (100 kw), currently have unsustainable, portable generators, but require automatic, fixed units in order to produce energy supply to ensure continuity of operations in the event of a utility or power failure; the Board of Elections facility (207 Rock City Street, Little Valley) does High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at the critical facility. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.										
Description of the Solution:	The Engineer will conduct a study to determine the required generator capacity to support the critical facility. The County will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, County Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of critical facilities that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>-</td> </tr> <tr> <td>Microgrid</td> <td>Costly and difficult to implement.</td> </tr> <tr> <td>Solar panels and battery backup</td> <td>Solar power is unlikely to be able to provide battery power for extended power failure events.</td> </tr> </tbody> </table>		Action	Evaluation	No Action	-	Microgrid	Costly and difficult to implement.	Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.	
Action	Evaluation										
No Action	-										
Microgrid	Costly and difficult to implement.										
Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.										

Action 2025-CattaraugusCo-14. Dam and Levee Failure Training

Lead Agency:	Cattaraugus County Office of Emergency Services										
Supporting Agencies:	Cattaraugus County Public Works, Dam Owners										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	A dam and/or levee failure is considered a low frequency event, meaning the likelihood of a failure is low; however, should a failure occur, the consequences could be high. Because of the low probability of occurrence, training for such events is uncommon and often not conducted. Emergency drills for low frequency events such as dam and/or levee failure must occur so first responders are aware of the procedures to follow and how to mitigate any identified gaps in their training. Conducting these trainings in collaboration with dam and/or levee owners can also make the owners aware of any vulnerabilities their infrastructure may have.										
Description of the Solution:	The Cattaraugus County Office of Emergency Services and Public Works will participate in emergency drills for low frequency events such as dam and/or levee failure. These trainings will be held in collaboration with dam and/or levee owners to make the owners aware of any vulnerabilities their infrastructure may have.										
Estimated Cost:	Low										
Potential Funding Sources:	County Budget, HSPG										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 4, 5, 7										
Benefits:	This action will improve the safety and security of those who live near the dams and/or levees and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	This action will improve the safety and security of those who live near the dams and/or levees and increase the resilience of responding agencies.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Dams and/or levees are considered a critical facility. This action will create an understanding of response and protection procedures to a dam and/or levee failure event.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam and/or levee event. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Hold trainings without dam and/or levee owners</td> <td>Dam and/or levee owners may not become aware of any vulnerabilities to their infrastructure</td> </tr> <tr> <td>Perform drills and trainings without input from SMEs</td> <td>Drills and trainings may not have all necessary information</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Hold trainings without dam and/or levee owners	Dam and/or levee owners may not become aware of any vulnerabilities to their infrastructure	Perform drills and trainings without input from SMEs	Drills and trainings may not have all necessary information
Action	Evaluation										
No Action	Current problem exists										
Hold trainings without dam and/or levee owners	Dam and/or levee owners may not become aware of any vulnerabilities to their infrastructure										
Perform drills and trainings without input from SMEs	Drills and trainings may not have all necessary information										

Action 2025-CattaraugusCo-15. Outdated FIRMs

Lead Agency:	Cattaraugus County Office of Emergency Services										
Supporting Agencies:	NYS DEC, NYS DHSES, FEMA, Local Jurisdictions										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	FIRMs are outdated and may not accurately display flood risk. Inaccurate flood maps can misinform the public of actual flood risk and may prevent interested homeowners from receiving or applying for flood insurance. Correctly displaying the areas at risk to the flood hazard is not only critical to visually show the risk, but to support grant applications for funding to mitigate the flood risk at identified locations within or around the floodplain.										
Description of the Solution:	The County will actively participate in the remapping process in partnership with NYS DEC, NYS DHSES, FEMA, and Local Jurisdictions. This participation will include providing data and information to support map revisions, identifying areas of flooding concern, providing review of preliminary maps, and adopting updated flood damage prevention local laws when the FIRMs are finalized.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, State Budget, County Budget, Local Jurisdictional Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 4										
Benefits:	Updating FIRMs will provide a more complete picture of the floodplain and the overall flood hazard in Cattaraugus County. This will inform other sectors of the community, including land use, development, permitting, and codes and standards.										
Impact on Socially Vulnerable Populations:	An analysis of the floodplain will inform future community development and land use and prevent vulnerable populations from residing in areas of heightened flood risk.										
Impact on Future Development:	Updated FIRMs will decide which populations and structures will require flood insurance to be built in areas of flood hazard.										
Impact on Critical Facilities/Lifelines:	Creation of updated floodplain maps will inform efforts to increase the resilience of critical infrastructure that is present in those areas, including transportation routes, water treatment plants, and other utility services. This will also aid in preventing future development of infrastructure in these areas.										
Impact on Capabilities:	An understanding of the floodplain will allow for the development of processes, plans, training and staff placement to address flooding issues in the areas of greatest concern before they occur.										
Climate Change Considerations:	The maps that are developed as a result of this action may not remain current or valid for the length of time that they may have in the past due to changes in floodplains and increases in extreme rainfall events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)

Action 2025-CattaraugusCo-16. Comprehensive Emergency Management Plan Updates

Lead Agency:	Cattaraugus County Office of Emergency Services										
Supporting Agencies:	Local Jurisdictions										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Local jurisdictional Comprehensive Emergency Management Plans (CEMPs) may be outdated and do not incorporate hazard mitigation principles. Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	Local jurisdictions will update their Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus County Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reducing the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The local jurisdictions will send the CEMP to the County for review, followed by a State review, as required.										
Estimated Cost:	Low										
Potential Funding Sources:	County Budget, Jurisdictional Budgets, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what each local jurisdiction will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit each local jurisdiction to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which each local jurisdiction performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for each local jurisdiction.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in a CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
County integrates hazard mitigation into the County CEMP	Each local jurisdiction CEMP will remain not updated										

Action 2025-CattaraugusCo-17. County Bridge Evaluations

Lead Agency:	Cattaraugus County Engineering
Supporting Agencies:	Cattaraugus County Public Works, NYS DOT
Hazard(s) of Concern:	<div><input type="checkbox"/> Dam and Levee Failure</div> <div><input checked="" type="checkbox"/> Flood</div> <div><input type="checkbox"/> Landslide</div> <div><input type="checkbox"/> Pandemic</div> <div><input checked="" type="checkbox"/> Severe Storm</div> <div><input checked="" type="checkbox"/> Severe Winter Storm</div> <div><input type="checkbox"/> Utility Failure</div> <div><input type="checkbox"/> Wildfire</div>
Description of the Problem:	<p>Scour on several County bridges has developed due to erosion. This erosion may have occurred due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may have caused flooding conditions to further erode the structure of the bridge. The following bridges should be evaluated to determine useability and to identify potential solutions:</p> <ul style="list-style-type: none">• Conewango 06• Conewango 14• Ellicottville 49• East Otto 12• East Otto 23• Farmersville 05• Farmersville 25• Freedom 25• Leon 36• Little Valley 06• Lyndon 03• Mansfield 12• Mansfield 37• Mansfield 51• Mansfield 62• Napoli 08• Otto 03• Otto 04• South Valley 04• South Valley 05• South Valley 08• Yorkshire 20
Description of the Solution:	The Engineer will evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.
Estimated Cost:	Medium
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY
Implementation Timeline:	Within 5 years
Goals Met:	1
Benefits:	This action will ensure the bridges in the County are structurally sound to continue in operation.
Impact on Socially Vulnerable Populations:	Not applicable
Impact on Future Development:	Not applicable
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.
Impact on Capabilities:	Not applicable

Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)		<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)		<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove bridges		May cause significant traffic problems
	Replace bridges		Cost prohibitive

Action 2025-CattaraugusCo-18. Temporary Sheltering

Lead Agency:	Cattaraugus County Office of Emergency Services										
Supporting Agencies:	Local Jurisdictions, American Red Cross										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. Local jurisdictions need to identify locations for the placement of temporary sheltering.										
Description of the Solution:	The Cattaraugus County Office of Emergency Services will work with local jurisdictions to identify local and regional locations for temporary sheltering.										
Estimated Cost:	Medium										
Potential Funding Sources:	County Budget, Local Jurisdictions, American Red Cross, HSGP										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 4, 6										
Benefits:	Providing a safe, climate-controlled location for individuals in need following an emergency can provide a sense of gratitude and normalcy to an otherwise negative event. Removing individuals from at-risk locations and offering temporary locations for impacted persons to gather, increases the safety of the overall community.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations are often the most at risk during emergencies and disaster events. Offering a safe location for these populations can ensure their health is looked after and they are removed from harm's way.										
Impact on Future Development:	The temporary sheltering facility will be able to support population increases brought in from potential future development.										
Impact on Critical Facilities/Lifelines:	This action would create, or expand on already existing, critical facilities, as sheltering locations are critical facilities.										
Impact on Capabilities:	This action will create a new capability for local jurisdictions by offering a resource for its visitors and residents to utilize should they be in need of temporary sheltering.										
Climate Change Considerations:	The changing climate may lead to the County, its residents, and visitors being exposed to hazards more frequently. Extreme temperatures have occurred more often in recent years which lead to drought; heavier rainfalls during severe storms have increased the occurrence of flooding. A temporary sheltering facility can provide a safe location for impacted individuals.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Allow local jurisdictions to sign MOU with the County to use its facilities</td> <td>Reliant on County opening facilities and facilities being available</td> </tr> <tr> <td>Utilize American Red Cross facilities</td> <td>Reliant on American Red Cross opening a facility</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Allow local jurisdictions to sign MOU with the County to use its facilities	Reliant on County opening facilities and facilities being available	Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility		
Action	Evaluation										
No Action	Current problem exists										
Allow local jurisdictions to sign MOU with the County to use its facilities	Reliant on County opening facilities and facilities being available										
Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility										

Action 2025-CattaraugusCo-19. Seneca Nation Partnership

Lead Agency:	Cattaraugus County Office of Emergency Services										
Supporting Agencies:	Cattaraugus County Public Works, Seneca Nation of Indians										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Seneca Nation of Indians has territorial lands within Cattaraugus County, therefore hazards within Cattaraugus County, including all the hazards identified within this plan, may also impact Tribal lands. Increasing communications across entities can reduce hazard risk on shared lands.										
Description of the Solution:	Cattaraugus County and the Seneca Nation of Indians will increase communications and shared efforts to reduce hazard risks across shared lands.										
Estimated Cost:	Low										
Potential Funding Sources:	County Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 6										
Benefits:	This action will increase the number of available capabilities to reduce hazard risks across Cattaraugus County and within Seneca Nation territories, enabling both entities to further implement short-term and long-term mitigation actions.										
Impact on Socially Vulnerable Populations:	Populations within both jurisdictions will have increased resiliency as capabilities are shared.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	This action will increase the number of available capabilities to reduce hazard risks across Cattaraugus County and within Seneca Nation territories.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. Sharing resources can increase available capabilities to reduce hazard risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)

Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Only certain County entities will partner with Seneca Nation of Indians</td> <td>Not all shared problems may be mitigated</td> </tr> <tr> <td>Only certain Seneca Nation of Indians entities will partner with Cattaraugus County</td> <td>Not all shared problems may be mitigated</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Only certain County entities will partner with Seneca Nation of Indians	Not all shared problems may be mitigated	Only certain Seneca Nation of Indians entities will partner with Cattaraugus County	Not all shared problems may be mitigated		
Action	Evaluation										
No Action	Current problem exists										
Only certain County entities will partner with Seneca Nation of Indians	Not all shared problems may be mitigated										
Only certain Seneca Nation of Indians entities will partner with Cattaraugus County	Not all shared problems may be mitigated										

3. TOWN OF ALLEGANY

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Allegany with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Allegany, describes who participated in the planning process, assesses Allegany's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

3.1 HAZARD MITIGATION PLANNING TEAM

The Town of Allegany identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Highway Superintendent represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 3-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 3-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: John Moshier, Highway Superintendent Address: 1502 Upper Branch Run Road, Allegany, NY 14706 Phone Number: 716-790-1182 Email: alleganyhighway@yahoo.com	Name/Title: Jim Hitchcock, Town Council Address: 114 N. First Street, Allegany, NY 14706 Phone Number: 716-372-0064 Email: jhitchcock@townofalleganyny.com
National Flood Insurance Program Floodplain Administrator	
Name/Title: Jerry Dzuroff, Code Enforcement Officer Address: 52 West Main Street., Allegany, NY 14706 Phone Number: 716-373-1540 x2 Email: buildingandzoning@townofallegany.com	

3.2 COMMUNITY PROFILE

The Town of Allegany lies on the south border of Cattaraugus County in western New York State. The Town of Allegany has a total area of 71.59 square miles. Allegany River flows through the town. The town is bordered to the north by the Town of Humphrey, the west border is formed by the Town of Carrollton and Town of Great Valley, to the east is the City of Olean and northeast is the Town of Hinsdale. The town is bordered to the south by the townships of Foster and Otto in McKean County, Pennsylvania. The Village of Allegany is located within the town. There are seven hamlets located within the town: Chipmonk, Crestview, Four Mile, Harrisburg, Knapp Creek, Nichols Run, and Rock City.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors

including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 3.6 percent of the population is 5 years of age or younger, 19.9 percent is 65 years of age or older, 0.3 percent is non-English speaking, 10.8 percent is below the poverty threshold, and 11.2 percent is considered disabled.

3.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Allegany performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Allegany to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

3.3.1 Planning and Regulatory Capability and Integration

Table 3-2 summarizes the planning and regulatory tools that are available to Allegany.

Table 3-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 1 of 2023: Fire Prevention & Building Code	State and Local	Building and Zoning
How has or will this be integrated with the HMP and how does this reduce risk? Code applies to construction, alteration, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.				
Zoning/Land Use Code	Yes	Zoning Ordinance III, 2016	Local	Building and Zoning
How has or will this be integrated with the HMP and how does this reduce risk? Promote and protect, to the fullest extent practicable, the environment of the Town and the public health, safety, and general welfare of the people. To accomplish this intent, in accordance with the Town's Comprehensive Plan, the Town				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
<p>Board finds it necessary and advisable to divide the area of the Town of Allegany into districts or zones, and to regulate the following elements of land use and development:</p> <p>(1) The location, spacing, size, height, and use of buildings and other structures, in relation to surrounding properties and uses.</p> <p>(2) The percentage of lot area which may be occupied, building setback lines, the sizes of yards, courts and other open spaces, and overall site plans.</p> <p>(3) The use of land for trade, industry, residences, recreation, public facilities and other purposes.</p> <p>(4) It is further the intent of this Zoning Ordinance to incorporate the land use-related goals of the Route 417 Corridor Management Plan, which are:</p> <p>(a) Improve traffic safety and pedestrian conditions.</p> <p>(b) Improve visual attractiveness.</p> <p>(c) Encourage innovative, quality architectural and site design.</p> <p>(d) Enhance the Town's tax base.</p> <p>(e) Minimize land use conflicts.</p>

Public Health Plan How has or will this be integrated with the HMP and how does this reduce risk? The Cattaraugus County Health Department's (CCHD) Strategic Planning Process began in April 2022 using the resources of the New York State Department of Health NYS Public Health Corp Fellows. As a part of this process, the fellows reviewed the 2018–2021 strategic plan for past successes and failures and discussed what was needed for future success. Both an external assessment, in which county demographic data, economic factors, health outcomes, and community health assessment findings that have the potential to affect the agency and strategies were examined, and an internal assessment of a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis was completed.	Yes	Health Department Strategic Plan 2022–2025	County	Health Department
Other: Community Needs Assessment and Community Health Improvement Plan How has or will this be integrated with the HMP and how does this reduce risk? The 2022–2024 OGH/BRMC Community Service Plan (CSP) and the CCHD's Community Health Assessment and Community Health Improvement Plan (CHA-CHIP) were conducted to identify significant health needs as outlined by the New York State Department of Health's 2022–2024 Prevention Agenda, where applicable. It also provides critical information OGH/BRMC, the CCHD, and others in a position to make a positive impact on the health of the region's residents. The CSP/CHA-CHIP enables the health department, hospital, and other community partners to strategically establish priorities, develop interventions, and direct resources to improve the health of residents living in the service area. The CSP/CHA-CHIP includes a detailed examination of priority areas identified in the NYS Prevention Agenda: (1) prevent chronic diseases; (2) promote a healthy and safe environment; (3) promote healthy women, infants and children; (4) promote well-being and prevent mental health and substance use disorders; and (5) prevent communicable diseases. The Prevention Agenda is a six-year effort to make New York the healthiest state. Developed in collaboration with 140 organizations, the plan identifies New York's most urgent health concerns, and suggests ways local health departments, hospitals, and partners from health, business, education, and community organizations can work together to solve them.	Yes	Community Needs Assessment and Community Health Improvement Plan	County	Health Department

3.3.2 Development and Permitting Capability

Table 3-3 summarizes the capabilities of Allegany to oversee and track development.

Table 3-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?	Yes	
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	N/A	Code Enforcement
Are permits tracked by hazard area? (For example, floodplain development permits.)	No	-
Do you have a buildable land inventory?	Yes	Included in updates of the Comprehensive Plan.
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 		
Describe the level of buildout in your jurisdiction.	N/A	According to the most recent Comprehensive Plan update in 2011, 19 percent of the land in the Town is vacant and could be built out.

3.3.3 Administrative and Technical Capability

Table 3-4 summarizes potential staff and personnel resources available to Allegany and their current responsibilities that contribute to hazard mitigation.

Table 3-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	The responsibilities include reviewing the site plans of town projects and assessing their environmental impacts, the granting of Special Use Permits, and the implementation of subdivision regulations.
Zoning Board of Adjustment	Yes	The Zoning Board of Appeals is responsible for deciding to grant variances for certain activities which conform to the adopted zones ordinance of the Town of Allegany. The Board acts only after the Zoning Officer has ruled that particular projects do not meet the requirements of the Zoning Ordinance.
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	The Town of Allegany Highway Department is responsible for the maintenance and improvement of the Town's public road infrastructure. The infrastructure includes more than 140 lane miles of roads and drainage systems. The Highway Department also maintains a fleet of approximately 30 vehicles and construction equipment.

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Construction/Building/Code Enforcement Department	Yes	The Town Code Enforcement Officer enforces the building and zoning ordinances of the Town
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	Yes	Village of Allegany, City of Olean
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	Yes	<p>Town Recreation Department: The purpose of the Allegany Recreation Department is to provide recreational services for the youth in the Allegany Community. The Department manages and operates a Youth Recreation Center at the Fourth & Maple Complex and the Senior Center.</p> <p>Town Water and Sewer Department: The Allegany Water Department is committed to ensuring that the collection, treatment, storage, transmission, and distribution of water is done in a professional manner intended to protect the health, safety, and welfare of the community. To provide potable water that is satisfactory for drinking in its physical, chemical, and biological characteristics meeting or exceeding all federal, state, and local drinking water requirements. To produce adequate quantities of water to meet the demands for consumption, industrial uses, and fire suppression in a cost-effective manner that preserves the public's investment in the Water System.</p>
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	Yes	The purpose of the Allegany Recreation Department is to provide recreational services for the youth in the Allegany Community. The Department manages and operates a

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
		Youth Recreation Center at the Fourth & Maple Complex and the Senior Center.
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

3.3.4 Fiscal Capability

Table 3-5 summarizes financial resources available to Allegany.

Table 3-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	Yes
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	Yes
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	Yes
Incur debt through private activity bonds	Yes
Withhold public expenditures in hazard-prone areas	Yes
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	Yes
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	Yes

3.3.5 Education and Outreach Capability

Table 3-6 summarizes the education and outreach resources available to Allegany.

Table 3-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Supervisor

Outreach Resources	Available? (Yes/No)	Comment
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	Yes	County – Gowanda Emergency Notification System
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	Yes	The purpose of the Allegany Recreation Department is to provide recreational services for the youth in the Allegany Community. The Department manages and operates a Youth Recreation Center at the Fourth & Maple Complex and the Senior Center.
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

3.3.6 Community Classifications

Table 3-7 summarizes classifications for community programs available to Allegany.

Table 3-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	Yes	Unknown	Unknown
National Weather Service StormReady Certification	No	-	-

New York State Climate Smart Communities	Yes	Registered	May 12, 2023
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

3.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 3-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 3-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Moderate

3.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 3-1 is responsible for maintaining this information.

3.4.1 NFIP Statistics

Table 3-9 summarizes the NFIP policy and claim statistics for Allegany.

Table 3-9. Allegany NFIP Summary of Policy and Claim Statistics

# Policies	39
# Claims (Losses)	21
Total Loss Payments	\$67,136.31
# Repetitive Loss Properties (NFIP definition)	1
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

3.4.2 Flood Vulnerability Summary

Table 3-10 provides a summary of the NFIP program in Allegany.

Table 3-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Along Waterbodies
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	None the Town is aware of
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Visual inspection and FEMA requirements
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	None
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	FEMA requirements
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No

NFIP Topic	Comments
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: April 27, 1999 CAV: October 9, 2020
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 1 of 1987: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	June 11, 1987
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Flood risk is considered
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

3.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 3-11 through Table 3-13.

Table 3-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 3-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any recent major development or infrastructure occurred between 2019 to present.

* Only location-specific hazard zones or vulnerabilities identified.

Table 3-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any known or anticipated major development or infrastructure in the next five years.

3.6 JURISDICTIONAL RISK ASSESSMENT

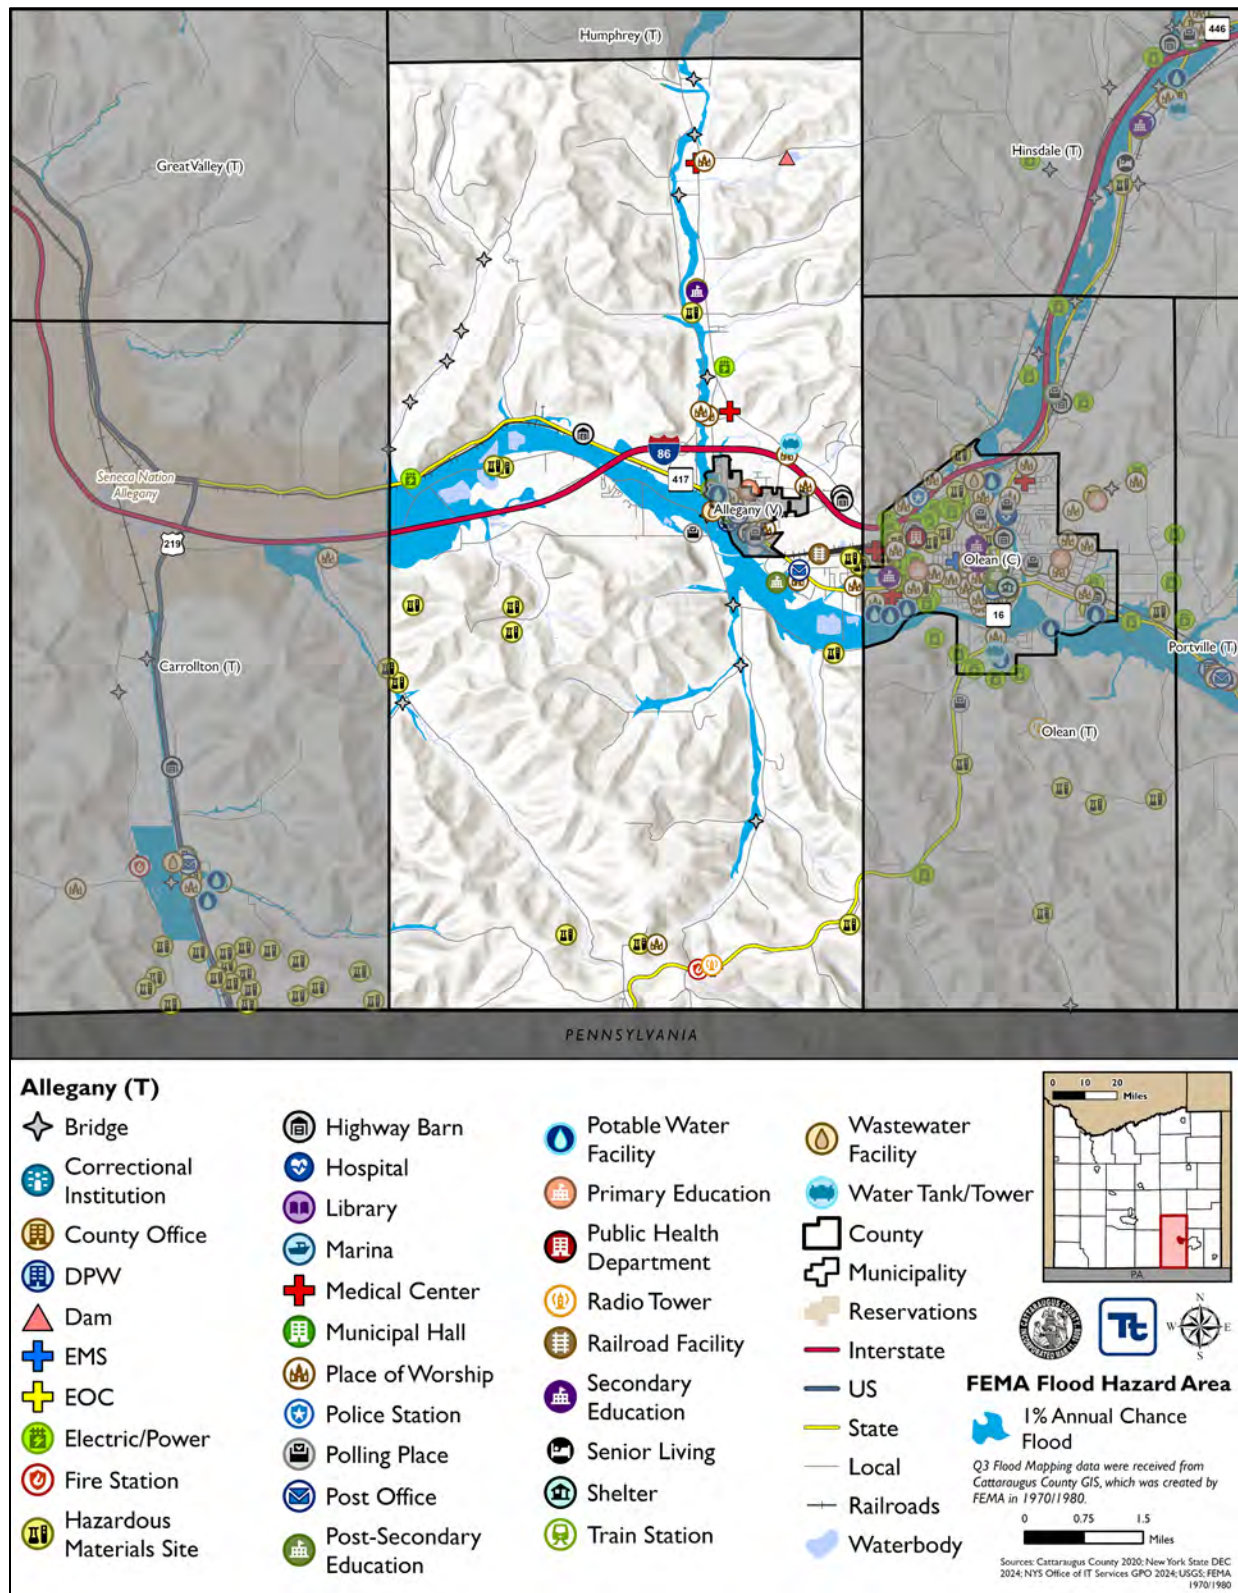

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Allegany's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

3.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 3-1 through Figure 3-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Allegany has significant exposure. The maps show the location of potential new development, where available.

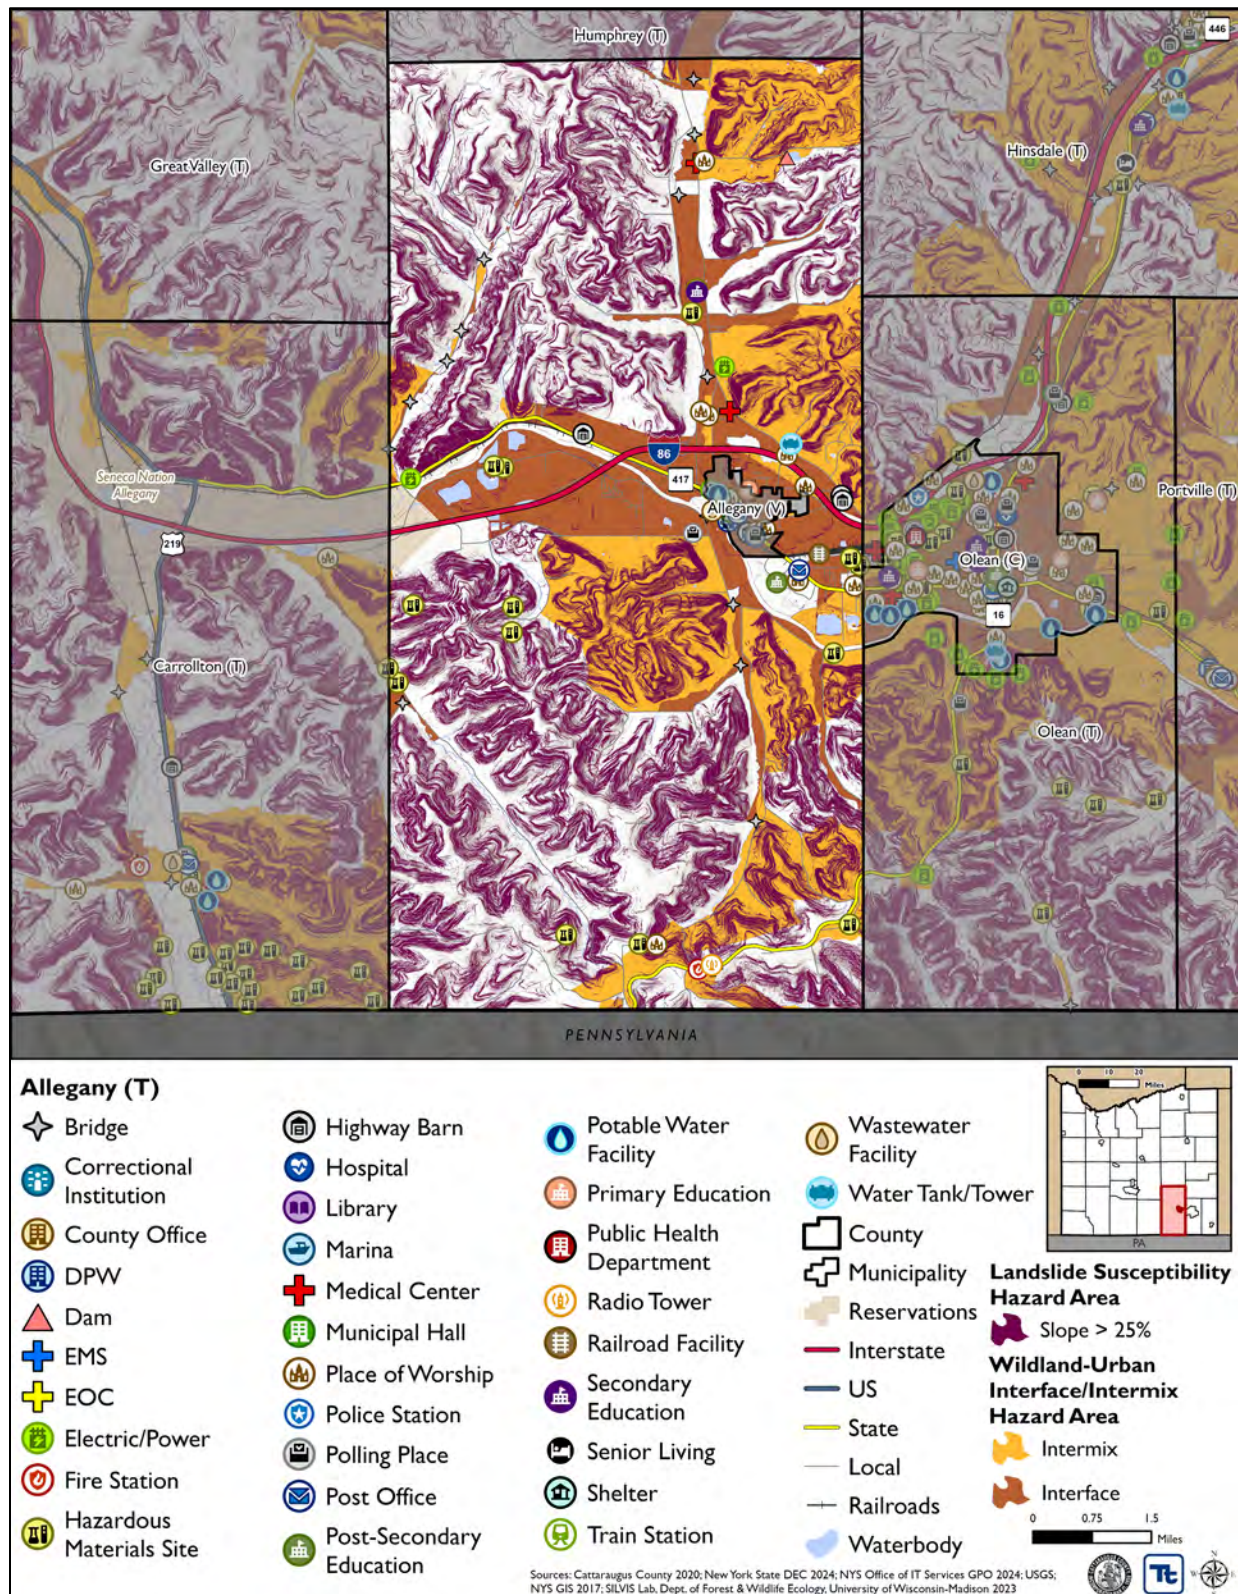

Figure 3-1. Allegany Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 3-2. Allegany Landslide and Wildfire Hazard Area Extent and Location Map

3.6.2 Hazard Event History

The history of natural and non-natural hazard events in Allegany is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 3-14 provides details on loss and damage in Allegany during hazard events since the last hazard mitigation plan update.

Table 3-14. Hazard Event History in Allegany

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Allegany
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur any documented damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town did not incur any documented damage or losses.
January 12, 2020	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur any documented damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur any documented damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur any documented damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur any documented damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur any documented damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not incur any documented damage or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur any documented damage or losses.
March 6, 2022	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Town did not incur any documented damage or losses.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Town did not incur any documented damage or losses.

EM = Emergency Declaration (FEMA)
FEMA = Federal Emergency Management Agency
DR = Major Disaster Declaration (FEMA)
N/A = Not applicable

3.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Allegany.

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Allegany reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town agreed with the preliminary rankings.

Table 3-15 shows Allegany's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 3-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Low
Flood	Low
Landslide	Low
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 3-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 3-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event

Source: Cattaraugus County 2024

3.6.4 Identified Issues

After a review of Allegany's hazard event history, hazard rankings, hazard location, and current capabilities, Allegany identified the following vulnerabilities within the community:

- Critical facilities must be protected to the 0.2% annual chance flood level. There are several critical facilities located in the special flood hazard area which may be vulnerable to flooding including:
 - Believers Chapel Inc.
 - First Free Methodist
 - Living Waters Church
 - Order Of Friars
 - Potter Lumber Co. LLC
 - Saint Bonaventure University
 - Village of Allegany Wastewater Facility
- There is not an emergency center on the southern side of the Allegany River. During an emergency, EMS has to drive a longer distance to and from the emergency center to care for residents on the southern side of the Allegany River. Treacherous road conditions during severe storms and severe winter storms can make travel even longer. Flooded roadways as a result of severe storms has the potential to close roads; landslides have the potential to occur on stretches of roads which traverse near steep slopes as a result of the heavy rains.

- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Large boulders and other obstructions from landslides can cause potential traffic accidents. Landslides may be able to be mitigated by cutting banks to prevent erosion.
- Critical facilities require backup power to ensure continuity of operations. The Highway Garage, which houses the Town vehicles and highway equipment, does not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Town needs to identify locations for the placement of temporary sheltering.
- The Town does not have an established tree trimming program in place. It is unknown the safety of trees throughout the Town. During wind events or heavy snow, falling tree branches can damage utilities and private property.
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding. Stormwater flooding is a problem throughout the town.
- The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The Town is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.
- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.

- Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Town has one repetitive loss property, but other properties may be impacted by flooding as well.
- The Town has dams within its jurisdiction. Despite not being identified as high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Allegany 04
 - Allegany 36
 - Allegany 49
 - Allegany 55
 - Allegany 58
 - Allegany 62
 - Allegany 66

3.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

3.7.1 Past Mitigation Action Status

Table 3-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

3.7.2 Additional Mitigation Efforts

Allegany did not identify any additional mitigation efforts completed since the last HMP.

Table 3-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Town of Allegany -001	Build an adequate emergency center on the southern side of the Allegheny River.	All Hazards	Town CEO, Emergency Management	<p>Problem: There is not an emergency center on the southern side of the Allegany River. During an emergency, EMS has to drive a longer distance to and from the emergency center to care for residents on the southern side of the Allegany River.</p> <p>Solution: Work with an architect and construction company to develop plans and determine the best location and design for an adequate emergency center on the southern side of the Allegany River. This will reduce the commute time to and from the emergency center which could result in saving more lives as patients get treated faster.</p>	1. No Progress 2. Financial constraints	1. Include 2. Not applicable 3. Not applicable
2020-Town of Allegany -002	Removal of large boulders and other obstructions in highway right of way.	Severe Winter storm (Ice Storms)	Town	<p>Problem: Large boulders and other obstructions can cause potential traffic accidents</p> <p>Solution: Remove boulders and obstructions in highway right of way.</p>	1. No Progress 2. Financial constraints	1. Include 2. Not applicable 3. Not applicable
2020-Town of Allegany -003	Backup power generators for the highway garage	All Hazards	Town Highway Department, Town Engineer	<p>Problem: Back up power sources are necessary to maintain critical services for critical facilities. The Highway Garage lacks permanent power source. The Highway Garage houses town vehicles and highway equipment.</p> <p>Solution: The Town Engineer will research what size generator is necessary to supply</p>	1. No Progress 2. Financial constraints	1. Include 2. Not applicable 3. Not applicable

3. Town of Allegany

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				backup power to the Highway Garage. The town will then install a backup power generator and necessary electrical components.		
2020-Town of Allegany -004	Update the town's Flood Damage Prevention Ordinance	Flood	Town Board	<p>Problem: The town's flood damage prevention ordinance was last updated in 1987</p> <p>Solution: Update the town's flood damage prevention ordinance</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Town of Allegany -005	Work with the Saint Bonaventure University facility owner on how they can protect their buildings.	Flood	FPA	<p>Problem: The Saint Bonaventure University is in the special flood hazard area and vulnerable to flooding. Critical facilities need to be protected to the 0.2% annual chance flood event.</p> <p>Solution: The FPA will contact the facility manager and discuss options for protecting the facility to the 0.2% annual chance flood level.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Town of Allegany -006	Work with Potter Lumber CO. LLC facility owner on how they can protect their building.	Flood	FPA	<p>Problem: The Potter Lumber CO. LLC facility is in the special flood hazard area and vulnerable to flooding. Critical facilities need to be protected to the 0.2% annual chance flood event.</p> <p>Solution: The FPA will contact the facility owner and discuss options for protecting the facility to the 0.2% annual change flood level.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Town of	Work with Believers Chapel Inc	Flood	FPA	<p>Problem: The Believers Chapel Inc is in the special flood hazard area and vulnerable to flooding. Critical facilities need to be</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
Allegany-007	facility owner on how they can protect their building.			protected to the 0.2% annual chance flood event. Solution: The FPA will contact the facility manager and discuss options for protecting the facility to the 0.2% annual chance flood level.		
2020-Town of Allegany-008	Work with the First Free Methodist facility owner on how they can protect their building.	Flood	FPA	Problem: First Free Methodist facility is in the special flood hazard area and vulnerable to flooding. Critical facilities need to be protected to the 0.2% annual chance flood event. Solution: The FPA will contact the facility manager and discuss options for protecting the facility to the 0.2% annual chance flood level.	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable
2020-Town of Allegany-009	Work with Living Waters Church facility owner on how they can protect their building.	Flood	FPA	Problem: Living Waters Church is in the special flood hazard area and vulnerable to flooding. Critical facilities need to be protected to the 0.2% annual chance flood event. Solution: The FPA will contact the facility manager and discuss options for protecting the facility to the 0.2% annual chance flood level.	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable
2020-Town of Allegany-010	Work with the Order of Friars facility owner on how they can protect	Flood	FPA	Problem: The Order of Friars facility is in the special flood hazard area and vulnerable to flooding. Critical facilities need to be protected to the 0.2% annual chance flood event.	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
	their building.			Solution: The FPA will contact the facility manager and discuss options for protecting the facility to the 0.2% annual chance flood level.		
2020-Town of Allegany-011	Work with the village on how they can protect their Wastewater Treatment Plant to the 0.2% annual chance flood event.	Flood	FPA	<p>Problem: The Village of Allegany's Wastewater Treatment Plant is in the special flood hazard area and vulnerable to flooding. Critical facilities need to be protected to the 0.2% annual chance flood event.</p> <p>Solution: The FPA will contact the facility manager and discuss options for protecting the facility to the 0.2% annual chance flood level.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Town of Allegany-012	Floodplain Administrator to attend training on floodplain management	Flood	Cattaraugus County Emergency Management/ Cattaraugus County Codes Department	<p>Problem: Floodplain Managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties.</p> <p>Solution: Obtain/host training and certification for floodplain managers.</p>	<p>1. No Progress</p> <p>2. Lack of available training</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Town of Allegany-013	Provide information to residents, business owners, and organizations about what they can do to protect their	Wildfires	Town board	<p>Problem: Additional public education on wildfire risk is needed</p> <p>Solution: The town will develop an outreach program to educate the public about wildfires and what they can do to protect their structures.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Allegany -017	Operations Plan			Solution: Update the town's emergency operation plan		
2020-Town of Allegany -018	Update Building Codes	All Hazards	County, Town	Problem: The town has outdated building codes. Solution: Update the town's building codes	1. Complete 2. Town adopted updated building codes in 2023	1. Discontinue 2. Not applicable 3. Town adopted updated building codes in 2023

3.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Allegany participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Allegany would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 3-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 3-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 3-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X				X					X
Flood	X	X		X	X		X		X	X
Landslide	X	X			X					X
Pandemic	X			X			X			X
Severe Storm	X	X	X		X			X	X	X
Severe Winter Storm	X	X	X		X			X		X
Utility Failure	X	X	X					X	X	X
Wildfire	X	X		X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 3-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-AlleganyT-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-AlleganyT-02	Emergency Center Facility	1	0	1	1	1	0	0	1	1	1	0	1	1	1	10	Medium
2025-AlleganyT-03	Landslide Mitigation	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-AlleganyT-04	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-AlleganyT-05	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-AlleganyT-06	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-AlleganyT-07	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-AlleganyT-08	Temporary Sheltering	1	0	1	1	1	1	0	1	1	1	1	1	1	0	11	High
2025-AlleganyT-09	Tree Maintenance Program	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-AlleganyT-10	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-AlleganyT-11	Comprehensive Emergency Management Plan Update	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-AlleganyT-12	Substantial Damage Management Plan	1	1	1	1	1	1	1	1	1	1	1	1	1	0	13	High
2025-AlleganyT-13	Pandemic Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-AlleganyT-14	Repetitive Loss Properties	1	1	1	1	1	0	1	1	1	0	1	1	0	1	11	High
2025-AlleganyT-15	Dam Owner Partnership	1	1	1	1	1	1	0	1	1	0	1	1	1	0	11	High
2025-AlleganyT-16	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-AlleganyT-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	<p>Critical facilities must be protected to the 0.2% annual chance flood level. There are several critical facilities located in the special flood hazard area which may be vulnerable to flooding including:</p> <ul style="list-style-type: none">• Believers Chapel Inc.• First Free Methodist• Living Waters Church• Order Of Friars• Potter Lumber Co. LLC• Saint Bonaventure University• Village of Allegany Wastewater Facility		
Description of the Solution:	<p>The Town will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the Town will carry out the option.</p>		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget		
Implementation Timeline:	Within 5 Years		
Goals Met:	1, 3, 5		
Benefits:	Ensures continuity of operations of several critical facilities in the Town.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.		
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.		
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.		
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.		
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists

	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area
	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.

DRAFT

Action 2025-AlleganyT-02. Emergency Center Facility

Lead Agency:	Building and Zoning Department										
Supporting Agencies:	Town Board, Contractors										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	There is not an emergency center on the southern side of the Allegany River. During an emergency, EMS has to drive a longer distance to and from the emergency center to care for residents on the southern side of the Allegany River. Treacherous road conditions during severe storms and severe winter storms can make travel even longer. Flooded roadways as a result of severe storms has the potential to close roads; landslides have the potential to occur on stretches of roads which traverse near steep slopes as a result of the heavy rains.										
Description of the Solution:	Work with an architect and construction company to develop plans and determine the best location and design for an adequate emergency center on the southern side of the Allegany River. This will reduce the commute time to and from the emergency center which could result in saving more lives as patients get treated faster.										
Estimated Cost:	TBD by engineering study										
Potential Funding Sources:	FEMA HMA, Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 6										
Benefits:	This action will reduce the travel time for EMS to transport patients to an emergency center. Currently, on the south side of the Allegany River there is not an emergency center. The construction of a new emergency center can remove future risk of long travels on clear days and during severe storms and severe winter storms.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may require additional health needs compared to the general population. The construction of this facility would create a new, closer facility which could support the needs of socially vulnerable populations.										
Impact on Future Development:	Future development on the southern side of the Allegany River would have a nearby emergency center.										
Impact on Critical Facilities/Lifelines:	The safety and security lifeline will have a new critical facility; the transportation lifelines may not be as congested due to the shortened time which would be required for travel to the facility.										
Impact on Capabilities:	This action will enhance response capabilities of the Town by creating a new emergency center.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Intense periods of rainfall can create visibility issues, as well as occurrences of flooding conditions.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)										
Priority	<input type="checkbox"/> High <input checked="" type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Build a clinic</td> <td>Emergency services not provided</td> </tr> <tr> <td>Build an emergency center in a different location</td> <td>It still would be a long commute for the population on the southern side of the Allegany River.</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Build a clinic	Emergency services not provided	Build an emergency center in a different location	It still would be a long commute for the population on the southern side of the Allegany River.
Action	Evaluation										
No Action	Current problem exists										
Build a clinic	Emergency services not provided										
Build an emergency center in a different location	It still would be a long commute for the population on the southern side of the Allegany River.										

Action 2025-AlleganyT-03. Landslide Mitigation

Lead Agency:	Highway Department										
Supporting Agencies:	Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Large boulders and other obstructions from landslides can cause potential traffic accidents. Landslides may be able to be mitigated by cutting banks to prevent erosion.										
Description of the Solution:	<p>The Town Engineer will complete an assessment to identify an appropriate, cost-effective method to mitigation landslide risk throughout Town. Possible mitigation measures include:</p> <ul style="list-style-type: none">• Construction of retaining walls, soil nailing, ground anchor walls• Install horizontal drains to reduce soil saturation• Cut banks along water ways to prevent oversaturated soils from falling• Install netting										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by landslide. Keeping the roadway open to traffic also permits vulnerable populations to travel to critical appointments.										
Impact on Future Development:	Future development in the impacted area will be less likely to be impacted by landslides.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation by mitigating potential roadway hazards.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Reconstruct roadway outside of hazard area</td><td>Not feasible</td></tr><tr><td>Close road and reroute traffic around hazard area</td><td>Not feasible, would cause confusion amongst travelers</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Reconstruct roadway outside of hazard area	Not feasible	Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers		
Action	Evaluation										
No Action	Current problem exists										
Reconstruct roadway outside of hazard area	Not feasible										
Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers										

Action 2025-AlleganyT-04. Generators at Critical Facilities

Lead Agency:	Engineering		
Supporting Agencies:	Town Board		
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Highway Garage, which houses the Town vehicles and highway equipment, does not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at the critical facility. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.		
Description of the Solution:	The Town Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Town will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.		
Estimated Cost:	High		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4, 5		
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.		
Impact on Future Development:	This action results in protection of critical facilities that could support future development.		
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.		
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives	Action		Evaluation
	No Action		-
	Microgrid		Costly and difficult to implement.
	Solar panels and battery backup		Solar power is unlikely to be able to provide battery power for extended power failure events.

Action 2025-AlleganyT-05. Flood Damage Prevention Ordinance Update

Lead Agency:	Building and Zoning Department		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-AlleganyT-06. Floodplain Management Training

Lead Agency:	Building and Zoning Department		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.		
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-AlleganyT-07. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-AlleganyT-08. Temporary Sheltering

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County Office of Emergency Services, Neighboring Jurisdictions, American Red Cross										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Town needs to identify locations for the placement of temporary sheltering.										
Description of the Solution:	The Town Supervisor will lead efforts to identify a suitable location to temporarily relocate residents or visitors in need of temporary sheltering. The Town will consider options to partner with neighboring jurisdictions for a regional location. The Town will contact the Cattaraugus County Office of Emergency Services for assistance as needed to identify a suitable, approved location.										
Estimated Cost:	Medium										
Potential Funding Sources:	Town Budget, County Budget, Neighboring Jurisdictions, American Red Cross, HSGP										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 4, 6										
Benefits:	Providing a safe, climate-controlled location for individuals in need following an emergency can provide a sense of gratitude and normalcy to an otherwise negative event. Removing individuals from at-risk locations and offering a temporary locations for impacted persons to gather, increases the safety of the overall community.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations are often the most risk during emergencies and disaster events. Offering a safe location for these populations can ensure their health is looked after and they are removed from harm's way.										
Impact on Future Development:	The temporary sheltering facility will be able to support population increases brought in from potential future development.										
Impact on Critical Facilities/Lifelines:	This action would create, or expand on already existing, critical facilities, as sheltering locations are critical facilities.										
Impact on Capabilities:	This action will create a new capability of the Town by offering a resource for its visitors and residents to utilize should they be in need of temporary sheltering.										
Climate Change Considerations:	The changing climate may lead to the Town, its residents, and visitors being exposed to hazards more frequently. Extreme temperatures have occurred more often in recent years which lead to drought; heavier rainfalls during severe storms have increased the occurrence of flooding. A temporary sheltering facility can provide a safe location for impacted individuals.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Utilize County facilities</td> <td>May require signed agreements; reliant on County opening facilities</td> </tr> <tr> <td>Utilize American Red Cross facilities</td> <td>Reliant on American Red Cross opening a facility</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Utilize County facilities	May require signed agreements; reliant on County opening facilities	Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility		
Action	Evaluation

Utilize County facilities	May require signed agreements; reliant on County opening facilities										
Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility										

Action 2025-AlleganyT-09. Tree Maintenance Program

Lead Agency:	Highway Department										
Supporting Agencies:	Utility Companies, Property Owners										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Town does not have an established tree trimming program in place. It is unknown the safety of trees throughout the Town. During wind events or heavy snow, falling tree branches can damage utilities and private property.										
Description of the Solution:	The Town will pursue funding support to have a forester assess trees, complete deed searches to verify Town right of way in targeted areas and then have the tree removal completed by qualified personnel. Implement, review, and enforce municipal policies and programs to prevent trees from threatening lives and impacting power availability/interruption in conjunction with property owners and utility companies.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will result in the reduction of risk surrounding power outages by minimizing potential impacts from trees on utility lines.										
Impact on Socially Vulnerable Populations:	Some socially vulnerable population rely on power utilities for everyday care. If power outages are caused by a lack of tree maintenance, lives could potentially be at risk.										
Impact on Future Development:	This action assists in the protection of future development from impacts caused by tree collapses or branch falls as a result of severe storms and severe winter storms.										
Impact on Critical Facilities/Lifelines:	Utility lines provide power to residencies, private businesses, government entities, and various providers. Not maintaining trees, tree limbs, or tree branches may impact the availability of power during severe weather and severe winter weather events.										
Impact on Capabilities:	The creation of a tree maintenance program would be a new capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to trees or tree limbs/branches falling or impacting utility lines and property.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input checked="" type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input checked="" type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Do not contact utility companies</td><td>Trees along utility lines may impact power during severe weather and severe winter weather events</td></tr><tr><td>Do not contact property owners</td><td>Trees on private residencies may impact power during severe weather and severe winter weather events</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Do not contact utility companies	Trees along utility lines may impact power during severe weather and severe winter weather events	Do not contact property owners	Trees on private residencies may impact power during severe weather and severe winter weather events
Action	Evaluation										
No Action	Current problem exists										
Do not contact utility companies	Trees along utility lines may impact power during severe weather and severe winter weather events										
Do not contact property owners	Trees on private residencies may impact power during severe weather and severe winter weather events										

Action 2025-AlleganyT-10. Floodprone Roads

Lead Agency:	Highway Department										
Supporting Agencies:	Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding. Stormwater flooding is a problem throughout the town.										
Description of the Solution:	The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include: <ul style="list-style-type: none"> • Elevation of roadways • Installation or improvement of drainage systems • Regrading of roadway and soils • Resurfacing or reshaping roadways 										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Relocate all flood-prone road system</td> <td>Not feasible</td> </tr> <tr> <td>Raise all flood prone roads</td> <td>Cost prohibitive</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Relocate all flood-prone road system	Not feasible	Raise all flood prone roads	Cost prohibitive		
Action	Evaluation										
No Action	Current problem exists										
Relocate all flood-prone road system	Not feasible										
Raise all flood prone roads	Cost prohibitive										

Action 2025-AlleganyT-11. Comprehensive Emergency Management Plan Update

Lead Agency:	Town Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Town will update the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Town will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Town will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Town to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Town performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Town CEMP will remain undeveloped</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped		
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped										

Action 2025-AlleganyT-12. Substantial Damage Management Plan

Lead Agency:	Highway Department										
Supporting Agencies:	Building and Zoning Department, Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Officials in NFIP-participating communities are responsible for regulating all development in SFHAs by issuing permits and enforcing local floodplain requirements, including Substantial Damage, for the repairs of damaged buildings. After any disaster event, they must:</p> <ul style="list-style-type: none"> Determine where the damage occurred within the community and if the damaged structures are in an SFHA. Determine what to use for "market value" and cost to repair; uniformly applying regulations will protect against liability and promote equitable administration. Determine if repairing plus improving the damaged structure equals or exceeds 50% of the structure's pre-damage value. Require permits for floodplain development. <p>The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The municipality is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.</p>										
Description of the Solution:	<p>The Town will develop a Substantial Damage Management Plan, following the six-step planning process in 2021 Developing a Substantial Damage Management Plan (https://crsresources.org/files/500/developing_subst_damage_mgmt_plan.pdf). This plan will outline responsibilities for Substantial Damage determinations, determining market value, and permit approval processes following a disaster event.</p>										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will provide a guidance document to determine substantial damage in the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may disproportionately be impacted by substantial damages.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	This action will produce substantial damage guidance for Town officials to use.										
Climate Change Considerations:	Climate change is leading to an increase in frequency and intensity of precipitation events, which also increases flooding and may lead to a main failure.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources following disaster events</td> <td>Resources may not be available during major widespread events</td> </tr> <tr> <td>Establish MOUs with outside agencies to conduct Substantial Damage Determinations</td> <td>A plan outlining responsibility is still necessary to prevent missing important requirements</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources following disaster events	Resources may not be available during major widespread events	Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources following disaster events	Resources may not be available during major widespread events										
Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements										

Action 2025-AlleganyT-13. Pandemic Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-AlleganyT-14. Repetitive Loss Properties

Lead Agency:	Building and Zoning Department										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Town has one repetitive loss property, but other properties may be impacted by flooding as well.										
Description of the Solution:	The Town will conduct outreach to the impacted properties and will provide information on mitigation alternatives. After preferred mitigation measures are identified, the Town will collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/purchase/moving/elevating of the affected properties that experience frequent flooding. The parameters for this initiative would be funding, benefits versus cost, and willing participation of property owners.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA FMA, FMA SWIFT, Town Budget, County Budget, Property Owners										
Implementation Timeline:	3 years										
Goals Met:	1										
Benefits:	This action would foster comprehensive floodplain management by removing at risk properties from the flood hazard area or elevating properties to reduce the flood risk.										
Impact on Socially Vulnerable Populations:	Collecting data regarding homeowners that reside within flood prone areas provides an opportunity to introduce location-specific opportunities for assistance. Socially vulnerable populations may be able to have houses elevated or acquired when it would otherwise be unaffordable.										
Impact on Future Development:	Increased outreach to homeowners within a flood prone area will limit construction in areas that are prone to hazard events. Homes may be acquired, which will remove those structures from the floodplain and prevent future development on those sites.										
Impact on Critical Facilities/Lifelines:	Removing structures from the floodplain decreases the demand on utilities and emergency services including health and medical, law enforcement, and search and rescue.										
Impact on Capabilities:	Outreach which promotes the removal of risk from the immediate floodplain via acquisition of properties will free up resources for search and rescue and other emergency operations as needed. This action will enhance the Town's current NFIP capabilities.										
Climate Change Considerations:	Climate change is likely to increase the frequency and severity of severe rainfall, flash flooding, riverine flooding, and coastal flooding from sea level rise and storm surge events. Removing structures from the floodplain will reduce the response and recovery costs as a result of these events and decrease the loss of human life as a result of these events. Elevating structures will reduce the recovery costs.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.										

Action 2025-AlleganyT-15. Dam Owner Partnership

Lead Agency:	Town Board										
Supporting Agencies:	NYS DEC, Dam Owners										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Town has dams within its jurisdiction. Despite not being high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.										
Description of the Solution:	The Town will work with the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3										
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within for those living near areas where the dams are located.										
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Town will be unaware of any safety concerns for the dam or its condition</td></tr><tr><td>Utilize information from NYS DEC</td><td>Owners may not be required to submit a safety plan to the State</td></tr><tr><td>Utilize information from the National Inventory of Dams</td><td>Not all dams are listed on the inventory</td></tr></tbody></table>			Action	Evaluation	No Action	Town will be unaware of any safety concerns for the dam or its condition	Utilize information from NYS DEC	Owners may not be required to submit a safety plan to the State	Utilize information from the National Inventory of Dams	Not all dams are listed on the inventory
Action	Evaluation										
No Action	Town will be unaware of any safety concerns for the dam or its condition										
Utilize information from NYS DEC	Owners may not be required to submit a safety plan to the State										
Utilize information from the National Inventory of Dams	Not all dams are listed on the inventory										

Action 2025-AlleganyT-16. Bridge Evaluations

Lead Agency:	Highway Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none">• Allegany 04• Allegany 36• Allegany 49• Allegany 55• Allegany 58• Allegany 62• Allegany 66										
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Remove bridges</td><td>May cause significant traffic problems</td></tr><tr><td>Replace bridges</td><td>Cost prohibitive</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Remove bridges	May cause significant traffic problems	Replace bridges	Cost prohibitive
Action	Evaluation										
No Action	Current problem exists										
Remove bridges	May cause significant traffic problems										
Replace bridges	Cost prohibitive										

4. VILLAGE OF ALLEGANY

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Village of Allegany with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Allegany, describes who participated in the planning process, assesses Allegany's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

4.1 HAZARD MITIGATION PLANNING TEAM

The Village of Allegany identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Village departments. The Code Enforcement Officer represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 4-1 summarizes Village officials who participated in the development of the annex and in what capacity. Additional documentation of the Village's planning activities through Steering Committee meetings is included in Volume I.

Table 4-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact

4.2 COMMUNITY PROFILE

The Village of Allegany is located in the eastern part of the Town of Allegany in Cattaraugus County in western New York State. The Village of Allegany has a total area of 0.71 square miles. The village is located north of the Allegany River and New York State Route 417 passes through the village. The village is bordered to the west of the city of Olean.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 4.2 percent of the

population is 5 years of age or younger, 26 percent is 65 years of age or older, 1.2 percent is non-English speaking, 20.3 percent is below the poverty threshold, and 13.9 percent is considered disabled.

4.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Allegany performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Allegany to identify opportunities for integrating mitigation concepts into ongoing Village procedures.

4.3.1 Planning and Regulatory Capability and Integration

Table 4-2 summarizes the planning and regulatory tools that are available to Allegany.

Table 4-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 2022.2, providing for the Administration & Enforcement of the NY State Uniform Fire Prevention & Building Code	State and Local	Village Clerk
How has or will this be integrated with the HMP and how does this reduce risk? Code applies to construction, alteration, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.				
Zoning/Land Use Code	Yes	Village of Allegany Zoning Law, 7-7-03	Local	Village Clerk
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
<p>Promote and protect, to the fullest extent practicable, the environment of the Village and the public health, safety, and general welfare of the people. To accomplish this intent, in accordance with the Village's Comprehensive Plan, the Village Board finds it necessary and advisable to divide the area of the Village of Allegany into districts or zones, and to regulate the following elements of land use and development:</p> <ul style="list-style-type: none"> (1) The location, spacing, size, height, and use of buildings and other structures, in relation to surrounding properties and uses. (2) The percentage of lot area which may be occupied, building setback lines, the sizes of yards, courts and other open spaces, and overall site plans. (3) The use of land for trade, industry, residences, recreation, public facilities and other purposes. (4) It is further the intent of this Zoning Ordinance to incorporate the land use-related goals of the Route 417 Corridor Management Plan, which are: <ul style="list-style-type: none"> (a) Improve traffic safety and pedestrian conditions. (b) Improve visual attractiveness. (c) Encourage innovative, quality architectural and site design. (d) Enhance the Town's tax base. (e) Minimize land use conflicts. 				
Subdivision Code	Yes	LL1-2005 Subdivision Regulations	Local	Planning Board
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>Provides for the future growth and development of the Village of Allegany and for the purpose of affording adequate facilities for the housing, transportation, distribution, comfort, convenience, safety, health and welfare of its population.</p>				
Site Plan Code	Yes	LL1-2005 Subdivision Regulations	Local and County	Code Enforcement Officer
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>If a cluster development includes multiple family dwellings, either as a part of the proposal or the entire proposal, the applicant shall submit a site plan that shows the open space areas; building locations; building elevations; and driveways, streets and parking areas. A landscaping plan is also required.</p>				
Stormwater Management Code	Yes	B2.18	Local	DPW
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>To protect residents and property from adverse effects of stormwater runoff caused by the modification of existing drainage systems during construction, reconstruction, or development on one or more parcels of land, and to promote water quality.</p>				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p>				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>In addition to facing potential liability for failing to disclose under the exceptions to "caveat emptor," a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.</p>				
Growth Management	No	-	-	-
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p>				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Environmental Protection Ordinance(s)	No	-	-	-

How has or will this be integrated with the HMP and how does this reduce risk?

Flood Damage Prevention Ordinance	Yes	Local Law #2: 1987, Flood Damage Prevention	Federal, State, County and Local	Code Enforcement Officer
--	-----	---	----------------------------------	--------------------------

How has or will this be integrated with the HMP and how does this reduce risk?

Promotes public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas.

- A. Regulate uses which are dangerous to health, safety and property due to water or erosion hazards or which result in damaging increases in erosion or in flood heights or velocities.
- B. Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction.
- C. Control the alteration of natural floodplains, stream channels and natural protective barriers which are involved in the accommodation of floodwaters.
- D. Control filling, grading, dredging and other development which may increase erosion or flood damages.
- E. Regulate the construction of flood barriers which will unnaturally divert floodwaters, or which may increase flood hazards to other lands.
- F. Qualify for and maintain participation in the National Flood Insurance Program.

4.3.2 Development and Permitting Capability

Table 4-3 summarizes the capabilities of Allegany to oversee and track development.

Table 4-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?	Yes	-
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	N/A	Code Enforcement
Are permits tracked by hazard area? (For example, floodplain development permits.)	No	-

	Yes/No	Comment
Do you have a buildable land inventory?	No	-
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 	N/A	-
Describe the level of buildout in your jurisdiction.	N/A	Approximately 90% built out.

4.3.3 Administrative and Technical Capability

Table 4-4 summarizes potential staff and personnel resources available to Allegany and their current responsibilities that contribute to hazard mitigation.

Table 4-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	The Planning Board works to promote the health, safety, and welfare of the Village of Allegany. It hears and determines all applications for Special Use Permits and does Site Plan Review and approval or denial. The Board also works with the Board of Trustees on local laws and with the Code Enforcement Officer.
Zoning Board of Adjustment	Yes	The Zoning Board of Appeals has the responsibility to conduct hearings on issues appealed to it. These matters may be appeals from decisions of the Code Enforcement Officer, and questions involving interpretation of the Zoning Law.
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	Staff employed at the DPW include a Superintendent and (4) four Maintenance Workers. This department operates and maintains a drinking water system, a sanitary sewer system, and a storm sewer system. The employees of the Department of Public Works also maintain a network of streets, Village owned buildings, vehicles, equipment, properties and park.
Construction/Building/Code Enforcement Department	Yes	The Code Enforcement Officers responsibility is to enforce the International Building and Fire Protection Code, the New York State Uniform Building and Fire Protection Code, local municipal building codes, zoning ordinances, and multiple residency law. Duties are performed under the general direction of the Village board with leeway allowed for the use of independent judgmental carrying out the details of their work.

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Emergency Management/Public Safety Department	Yes	The Village of Allegany Police Department represents an organization whose existence is justified on the basis of community service. There are many responsibilities associated with our mission. They include enforcement of local, county, state and federal law; maintaining the peace and order of the community; protecting property and personal safety; educating the public; and assisting citizens in various situations.
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	Yes	Town of Allegany, City of Olean
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other: Tree Board	Yes	<p>The Village of Allegany Tree Board was formed to develop and help facilitate a plan for the development, conservation, and care of the "urban forest". Its goals are to review and update our village tree ordinance, and to develop a long-range plan for the urban forest of the village. In most cases, "urban forest" refers to trees in the village which are in or impact the public right of ways.</p> <p>Its primary purpose is to achieve an urban forest that is safe, healthy, diverse, pleasing to the senses, and functional. The Board welcomes input from interested and knowledgeable sources.</p>
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

4.3.4 Fiscal Capability

Table 4-5 summarizes financial resources available to Allegany.

Table 4-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	Yes
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	Yes
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	Yes
Incur debt through private activity bonds	Yes
Withhold public expenditures in hazard-prone areas	Yes
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	Yes
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	Yes

4.3.5 Education and Outreach Capability

Table 4-6 summarizes the education and outreach resources available to Allegany.

Table 4-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Student volunteer from St. Bonaventure University
Personnel skilled or trained in website development	Yes	City of Olean IT Department
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-

Outreach Resources	Available? (Yes/No)	Comment
Warning systems for hazard events	No	-
Natural disaster/safety programs in place for schools	Yes	Fire and Severe Storm Safety program
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

4.3.6 Community Classifications

Table 4-7 summarizes classifications for community programs available to Allegany.

Table 4-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	Yes	Unknown	Unknown
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

4.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 4-8 summarizes the adaptive capacity for each identified hazard of concern and the Village’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 4-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Moderate

4.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 4-1 is responsible for maintaining this information.

4.4.1 NFIP Statistics

Table 4-9 summarizes the NFIP policy and claim statistics for Allegany.

Table 4-9. Allegany NFIP Summary of Policy and Claim Statistics

# Policies	24
# Claims (Losses)	27
Total Loss Payments	\$179,738
# Repetitive Loss Properties (NFIP definition)	2
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

4.4.2 Flood Vulnerability Summary

Table 4-10 provides a summary of the NFIP program in Allegany.

Table 4-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	

NFIP Topic	Comments
Describe areas prone to flooding in your jurisdiction.	7th Street, South 7th Street, East Union Street, West Union Street, North 1st Street, South 1st Street
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Unknown
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Unknown
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	Unknown
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	If improvement is over 50 percent of the structure's existing value
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: July 22, 2002 CAV: October 9, 2020
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law #2: 1987, Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	Amended 1989

NFIP Topic	Comments
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Yes, the Village has site plan review to support requirements. Planning board considers efforts to reduce flood risk.
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

4.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 4-11 through Table 4-13.

Table 4-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	1	0	1
Permits within SFHA	0	1	0	1
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 4-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

There has been no recent major development or infrastructure between 2019 to present.

* Only location-specific hazard zones or vulnerabilities identified.

Table 4-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

There are no known or anticipated major development or infrastructure in the next five years.

4.6 JURISDICTIONAL RISK ASSESSMENT

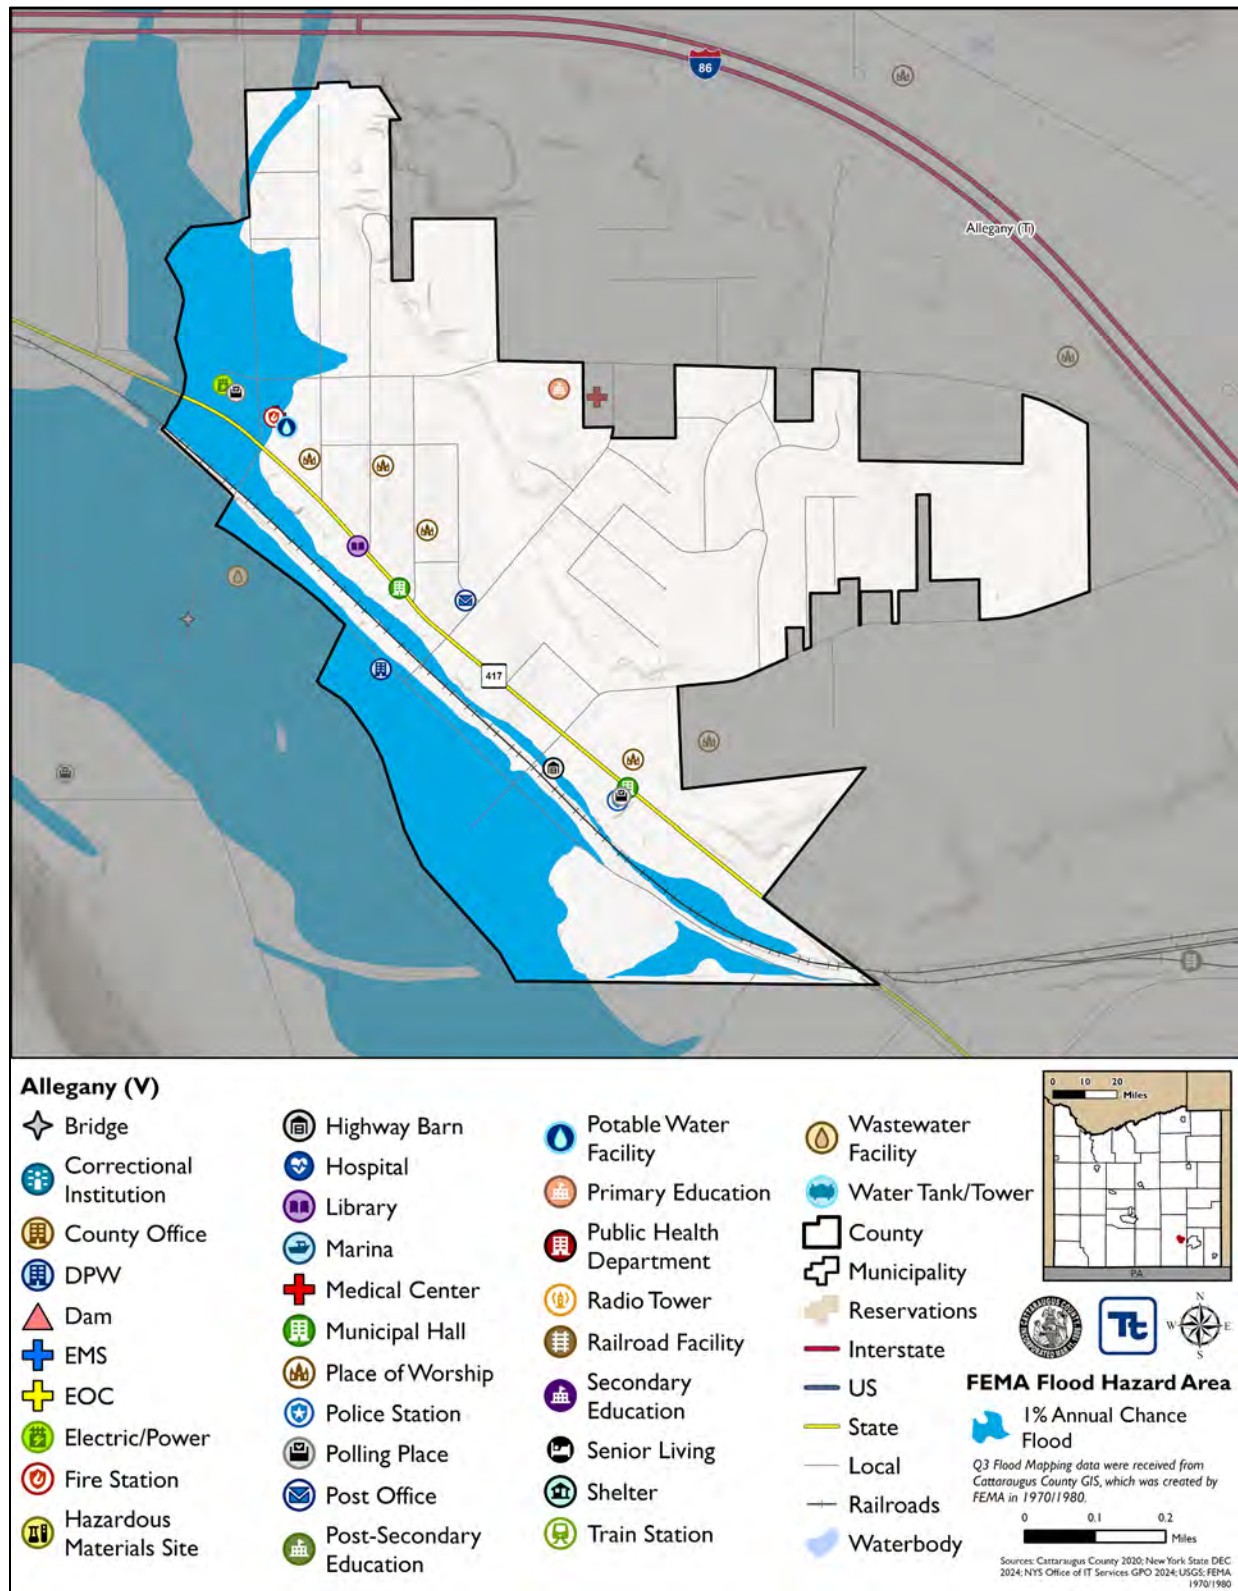

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Allegany's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

4.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Village are shown in Figure 4-1 through Figure 4-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Allegany has significant exposure. The maps show the location of potential new development, where available.

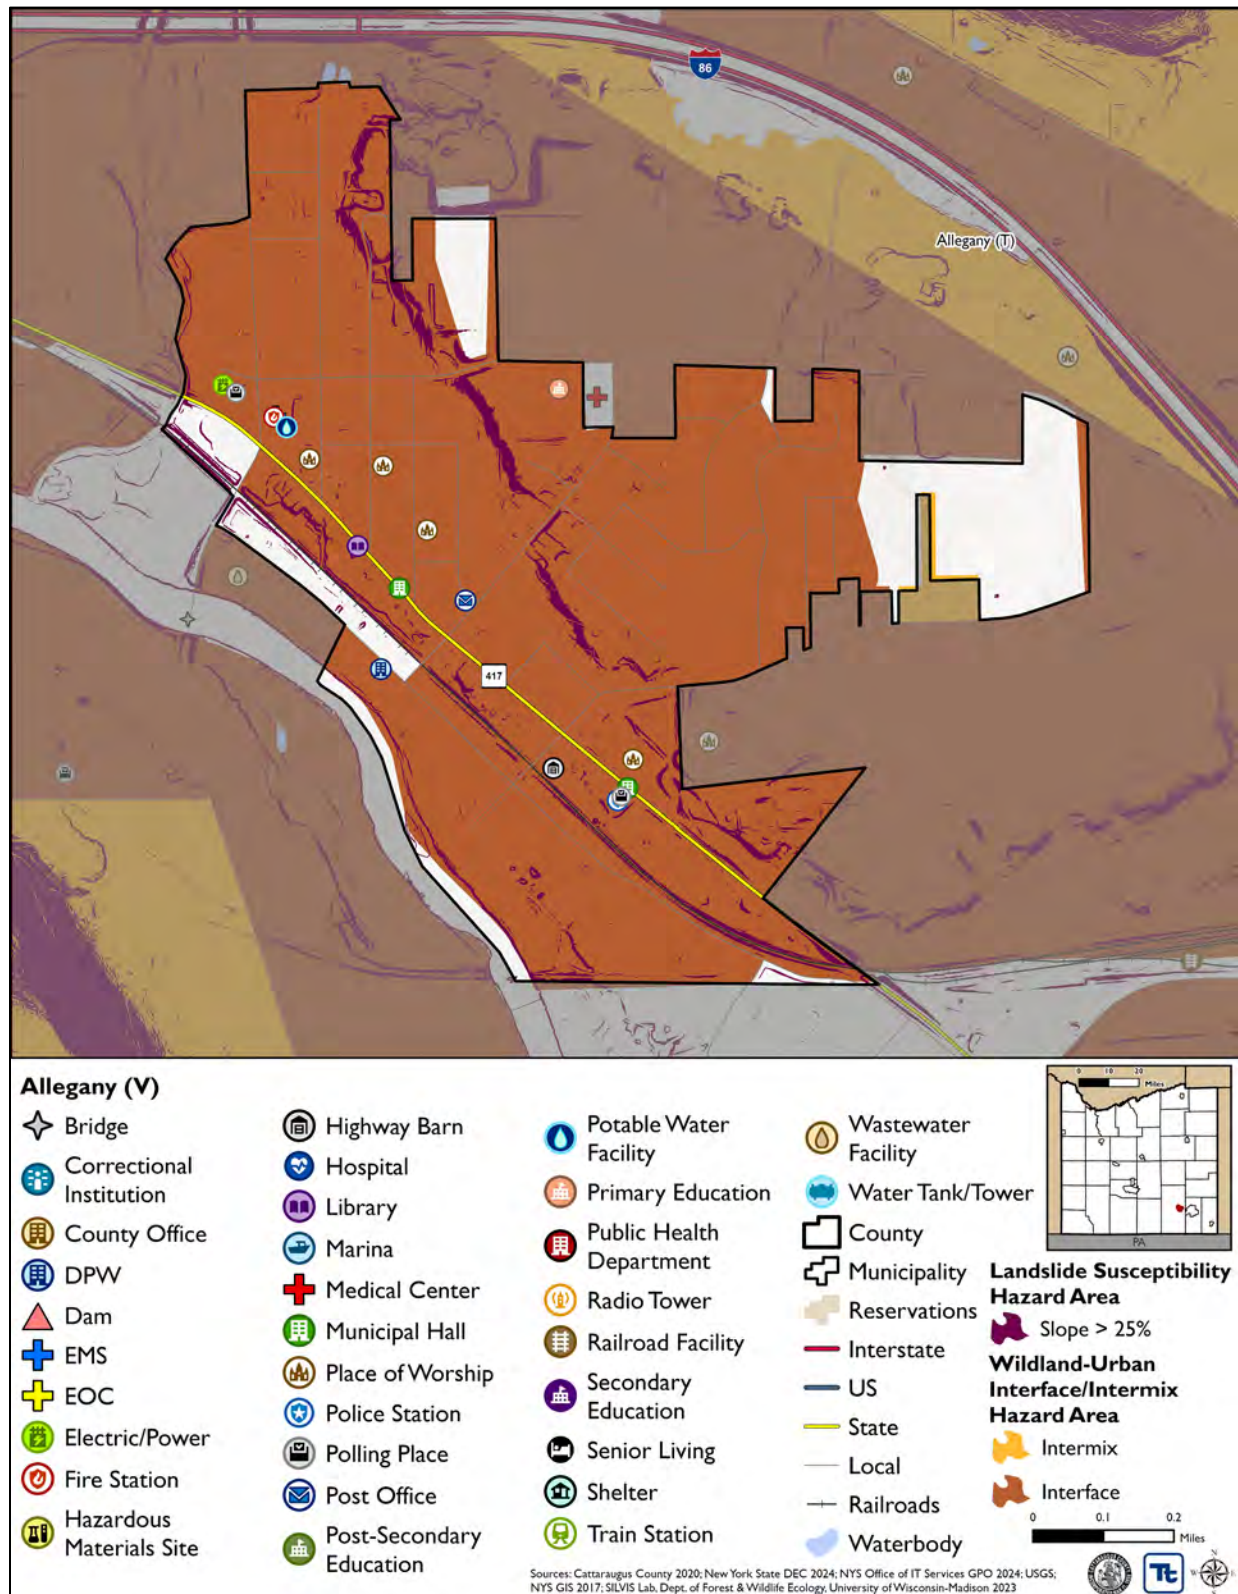

Figure 4-1. Allegany Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 4-2. Allegany Landslide and Wildfire Hazard Area Extent and Location Map

4.6.2 Hazard Event History

The history of natural and non-natural hazard events in Allegany is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 4-14 provides details on loss and damage in Allegany during hazard events since the last hazard mitigation plan update.

Table 4-14. Hazard Event History in Allegany

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Allegany
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	Trees and wires were reported down. Localized road flooding.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	PPE distribution, masking mandates, social distancing enforced
January 12, 2020	High Wind	N/A	High wind	Trees and wires were reported down
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	No damages or losses
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	No damages or losses
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	No damages or losses
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	Trees and wires were reported down
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	Trees and wires were reported down
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	Trees and wires were reported down
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	Trees and wires were reported down
March 6, 2022	High Wind	N/A	High wind	No damages or losses
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	No damages or losses
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	DPW response to clear roads

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

4.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Allegany .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Allegany reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Village indicated the following:

- The Landslide hazard ranking was decreased from 'High' to 'Medium due to an additional storm/drain being installed on Harriet Street to reduce run -off onto North Fifth Street. This addition to the stormwater management system decreases the water run-off onto soils which may otherwise lead to increased risk for a landslide.

Table 4-15 shows Allegany's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 4-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Low
Flood	Medium
Landslide	Medium
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 4-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 4-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Allegany	Fire Station	X	-	2025-AlleganyV-02	-

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event

Source: Cattaraugus County 2024

4.6.4 Identified Issues

After a review of Allegany's hazard event history, hazard rankings, hazard location, and current capabilities, Allegany identified the following vulnerabilities within the community:

- Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Village has two repetitive loss properties, but other properties may be impacted by flooding as well.
- The following critical facilities are located in the special flood hazard area and may have an increased risk to flooding impacts:
 - Village of Allegany Wastewater Treatment Plant
 - Allegany Transfer Station
 - Allegany Fire Station
 - Allegany TB Fire Comm
 - Allegany BD of Fire Comm
 - Village of Allegany Highway Barn
 - Allegany Community Center
 - Allegany Engine Co Inc
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in the Village which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:
 - 7th Street
 - South 7th Street
 - East Union Street
 - West Union Street
 - North 1st Street

- South 1st Street
- The Department of Public Works, Water Pump Station 1, and Water Pump Station 3 located in the Village do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The Village currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.
- The Village does not have a Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- The Recycling/Transfer facility is in the floodplain at West Union and South First Street. It has a holding pond and hazardous materials that could potentially create a hazardous materials (hazmat) situation during flooding events, which may stem from severe storms. The facility is undergoing remodeling so that it will be in compliance with DEC guidelines and the 2020 Building Codes, concerning buildings built within floodplains. Estimated completion is end of 2025.
- The Village does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The municipality is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.

4.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

4.7.1 Past Mitigation Action Status

Table 4-17 indicates progress on the Village's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

4.7.2 Additional Mitigation Efforts

In addition to the mitigation actions completed in Table 4-17, Allegany identified the following mitigation efforts completed since the last HMP:

- An additional storm/drain being installed on Harriet Street to reduce run-off onto North Fifth Street.
- Back-up generators have been installed at the Village Municipal Office Building and the Village's main water tank, located on Buffalo Road.

Since the adoption of the County's first HMP, Allegany has made significant mitigation progress in the following areas:

- Stormwater Management
- Continuity of Operations

DRAFT

Table 4-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Village of Allegany-001	Storm sewer replacement on 7th Street	Flood, Severe Storm	Highway Department	Problem: Flooding occurs on 7th St when there are heavy rains. Solution: Improve storm sewer drainage in Village of Allegany on 7th St.:	1. In Progress 2. Working on applying for and receiving Grant Funds to upgrade systems. Finding the right financial terms for the Village is a barrier to getting funding.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Allegany-002	Protect the Village of Allegany Wastewater Treatment Plant to the 0.2% annual chance flood event.	Flood	Engineer, facility manager	Problem: The Village of Allegany Wastewater Treatment Plant is in the special flood hazard area and vulnerable to flooding. Critical facilities need to be protected to the 0.2% annual chance flood event. Solution: The village will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the Wastewater Treatment Plant to protect it to the 0.2% annual chance flood event. Options include: <ul style="list-style-type: none"> Elevation of facility Floodproofing of facility Mobile flood barriers Once the most cost-effective option is identified, the village will carry out the option.	1. In Progress 2. Working on funding through grants and other governmental funding programs.	1. Include 2. Consolidate into singular action with other identified critical facilities in the flood hazard area. 3. Not applicable
2020-Village of Allegany-003	Protect the Allegany Transfer Station to the 0.2% annual	Flood	Engineer, facility manager	Problem: Allegany Transfer Station is in the special flood hazard area and vulnerable to flooding. Critical facilities	1. In Progress 2. Working on funding through grants and other governmental funding programs.	1. Include 2. Consolidate into singular action with other identified

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. 	and sewer pump stations #1 and #2			Solution: Purchase and install generators at water pump stations (two required at water well #1 and #3 and sewer pump stations #1 and #2)		
2020-Village of Allegany-015	Update Flood Damage Prevention Ordinance	Flood	Village Board	Problem: Flood Damage Prevention Ordinance is outdated Solution: Update the village's flood damage prevention ordinance	1. No Progress 2. Other Village priorities have resulted in no progress on this action.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Allegany-016	Potential acquisition projects that are within the floodplain	Flood	Building Code- John Helgager and Infrastructure- Frank Snyder	Problem: All of East and West Union Street properties (south side of Union Street is primarily residential properties) are located within the floodplain and prone to flooding Solution: Acquire properties within the floodplain	1. No Progress 2. Other Village priorities have resulted in no progress on this action.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Allegany-017	Floodplain Administrator to attend training on floodplain management.	Flood	Cattaraugus County OES/ Cattaraugus County Codes Department	Problem: Floodplain Managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Solution: Obtain/host training and certification for floodplain managers	1. No Progress 2. Other Village priorities have resulted in no progress on this action.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Allegany-018	Provide residents, business owners, and organizations about what they can do to protect their structures from wildfires.	Flood	Village Board	Problem: Additional public education on wildfire risk is needed Solution: The village will develop an outreach program to educate the public about wildfires and what they can do to protect their structures.	1. No Progress 2. Other Village priorities have resulted in no progress on this action.	1. Include 2. Change to outreach program for all hazards. 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Village of Allegany-019	Update the Emergency Operations Plan	All Hazards	County, Village	Problem: outdated emergency operation plan Solution: Update the village's emergency operation plan	1. No Progress 2. Village indicated in capabilities it does not have a CEMP.	1. Include 2. Change action to develop a CEMP 3. Not applicable
2020-Village of Allegany-020	Update Building Codes	All Hazards	County, Village	Problem: Outdated building codes Solution: Update the village's building codes	1. Ongoing Capability 2. Village codes are reviewed and updated on a scheduled basis	1. Discontinue 2. Not applicable 3. Village capability
2020-Village of Allegany-021	Protect the Recycling/Transfer facility from flooding	Flood	DPU and CEO	Problem: The Recycling/Transfer facility is in the floodplain at West Union and South First Street. It has a holding pond and hazardous materials that could potentially create a HAZMAT situation during flooding events. Solution: Conduct a feasibility study to determine and implement best action to protect the Recycling/Transfer Facility from flooding	1. In Progress 2. Facility is undergoing remodeling so that it will be in compliance with DEC guidelines and the 2020 Building Codes, concerning buildings built within floodplains. Estimated completion is end of 2025.	1. Include 2. Change action to remodel the facility instead of conducting a feasibility study. 3. Not applicable

4.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Allegany participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Allegany would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Village priorities.

Table 4-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 4-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 4-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X			X			X			X
Flood	X	X		X	X		X		X	X
Landslide	X			X			X			X
Pandemic	X			X			X			X
Severe Storm	X	X		X	X		X		X	X
Severe Winter Storm	X	X		X			X			X
Utility Failure	X	X		X			X		X	X
Wildfire	X			X			X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 4-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-AlleganyV-01	Repetitive Loss Properties	1	1	1	1	1	0	1	1	1	0	1	1	0	1	11	High
2025-AlleganyV-02	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-AlleganyV-03	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-AlleganyV-04	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-AlleganyV-05	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-AlleganyV-06	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-AlleganyV-07	Comprehensive Outreach Program	1	1	1	1	1	1	0	1	1	1	1	1	0	1	12	High
2025-AlleganyV-08	Develop a Comprehensive Emergency Management Plan	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-AlleganyV-09	Recycling/Transfer Facility Remodeling	0	1	1	1	1	0	0	1	1	1	1	1	1	1	11	High
2025-AlleganyV-10	Substantial Damage Management Plan	1	1	1	1	1	1	1	1	1	1	1	1	1	0	13	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-AlleganyV-01. Repetitive Loss Properties

Lead Agency:	Code Enforcement										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Village has two repetitive loss properties, but other properties may be impacted by flooding as well. Some of these properties are located in the Special Flood Hazard Area, with development requiring floodproofing.										
Description of the Solution:	The Village will promote and support non-structural flood hazard mitigation alternatives for at risk properties within the floodplain, including those that have been identified as Repetitive Loss (RL), such as acquisition/relocation or elevation depending on feasibility. The parameters for this initiative would be funding, benefits versus cost, and willing participation of property owners.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA FMA, FMA SWIFT, Village Budget, County Budget, Property Owners										
Implementation Timeline:	3 years										
Goals Met:	1										
Benefits:	This action would foster comprehensive floodplain management by removing at risk properties from the flood hazard area or elevating properties to reduce the flood risk.										
Impact on Socially Vulnerable Populations:	Collecting data regarding homeowners that reside within flood prone areas provides an opportunity to introduce location-specific opportunities for assistance. Socially vulnerable populations may be able to have houses elevated or acquired when it would otherwise be unaffordable.										
Impact on Future Development:	Increased outreach to homeowners within a flood prone area will limit construction in areas that are prone to hazard events. Homes may be acquired, which will remove those structures from the floodplain and prevent future development on those sites.										
Impact on Critical Facilities/Lifelines:	Removing structures from the floodplain decreases the demand on utilities and emergency services including health and medical, law enforcement, and search and rescue.										
Impact on Capabilities:	Outreach which promotes the removal of risk from the immediate floodplain via acquisition of properties will free up resources for search and rescue and other emergency operations as needed. This action will enhance the Village's current NFIP capabilities.										
Climate Change Considerations:	Climate change is likely to increase the frequency and severity of severe rainfall, flash flooding, riverine flooding, and coastal flooding from sea level rise and storm surge events. Removing structures from the floodplain will reduce the response and recovery costs as a result of these events and decrease the loss of human life as a result of these events. Elevating structures will reduce the recovery costs.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Levee around floodplain</td><td>Costly, not enough room.</td></tr><tr><td>Deployable flood barriers</td><td>Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Levee around floodplain	Costly, not enough room.	Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.
Action	Evaluation										
No Action	Current problem exists										
Levee around floodplain	Costly, not enough room.										
Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.										

Action 2025-AlleganyV-02. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers								
Supporting Agencies:	Village Board								
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire							
Description of the Problem:	<p>The following critical facilities are located in the special flood hazard area and may have an increased risk to flooding impacts:</p> <ul style="list-style-type: none">• Village of Allegany Wastewater Treatment Plant• Allegany Transfer Station• Allegany Fire Station• Allegany TB Fire Comm• Allegany BD of Fire Comm• Village of Allegany Highway Barn• Allegany Community Center• Allegany Engine Co Inc								
Description of the Solution:	<p>The Village will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the Branchport Firehouse and Branchport Free Library to protect it to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the Village will carry out the option.</p>								
Estimated Cost:	Medium								
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Village Budget								
Implementation Timeline:	Within 5 Years								
Goals Met:	1, 3, 5								
Benefits:	Ensures continuity of operations of several critical facilities in the Village.								
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.								
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.								
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.								
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.								
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.								
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)							
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)							
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low						
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facility</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area		
Action	Evaluation								
No Action	Current problem exists								
Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area								

Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events

Reduction in response times and delay of critical services in the immediate area.

DRAFT

Action 2025-AlleganyV-03. Floodprone Roads

Lead Agency:	Public Works										
Supporting Agencies:	Code Enforcement, Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Village which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including</p> <ul style="list-style-type: none">• 7th Street• South 7th Street• East Union Street• West Union Street• North 1st Street• South 1st Street										
Description of the Solution:	<p>The Village will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include:</p> <ul style="list-style-type: none">• Elevation of roadways• Installation or improvement of drainage systems• Regrading of roadway and soils• Resurfacing or reshaping roadways										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Village Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Village's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate all flood-prone road system</td><td>Not feasible</td></tr><tr><td>Raise all flood prone roads</td><td>Cost prohibitive</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Relocate all flood-prone road system	Not feasible	Raise all flood prone roads	Cost prohibitive		
Action	Evaluation										
No Action	Current problem exists										
Relocate all flood-prone road system	Not feasible										
Raise all flood prone roads	Cost prohibitive										

Action 2025-AlleganyV-04. Generators at Critical Facilities

Lead Agency:	Public Works		
Supporting Agencies:	Village Board, Engineering		
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	The Department of Public Works, Water Pump Station 1, and Water Pump Station 3 located in the Village do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.		
Description of the Solution:	The Village Engineer will conduct a study to determine the required generator capacity to support the critical facilities. The Village will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for this critical facility and its operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.		
Estimated Cost:	High		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Annual Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4, 5		
Benefits:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.		
Impact on Future Development:	This action results in protection of a critical facility that could support future development.		
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.		
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.		
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives	Action		Evaluation
	No Action		-
	Microgrid		Costly and difficult to implement.
	Solar panels and battery backup		Solar power is unlikely to be able to provide battery power for extended power failure events.

Action 2025-AlleganyV-05. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement		
Supporting Agencies:	Village Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Village will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Village will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Village Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-AlleganyV-06. Floodplain Management Training

Lead Agency:	Code Enforcement										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.										
Description of the Solution:	Where feasible, the Village will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 3, 4										
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.										
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.										
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.										
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.										
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.										
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Hire outside contractors for floodplain administration</td><td>Costly</td></tr><tr><td>Establish shared service agreements for floodplain administration from neighboring municipalities</td><td>Neighboring municipalities are unlikely to have the staff capacity to take on this role</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Hire outside contractors for floodplain administration	Costly	Establish shared service agreements for floodplain administration from neighboring municipalities	Neighboring municipalities are unlikely to have the staff capacity to take on this role		
Action	Evaluation										
No Action	Current problem exists										
Hire outside contractors for floodplain administration	Costly										
Establish shared service agreements for floodplain administration from neighboring municipalities	Neighboring municipalities are unlikely to have the staff capacity to take on this role										

Action 2025-AlleganyV-07. Comprehensive Outreach Program

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus County										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Village currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on hazard risks and methods of mitigation measures, including those for dam and levee failure, flood, landslide, pandemic, severe storm, severe winter storm, utility failure, and wildfire. Methods of distribution may include Village events, the Village newsletters, social media, the Village website, and having the materials on display for the public at Village libraries and offices. Outreach materials will be specified with education and information for each individual hazard of concern.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the current public education and outreach program in the Village by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Village.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the various hazards which may impact them in the Village.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of potential hazards. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's already existing public education and outreach program and adapt it to the Village's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from hazards and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Village</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance

Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-AlleganyV-08. Develop a Comprehensive Emergency Management Plan

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Village does not have a Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Village Board will lead the development of the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Village will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Village will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Village to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Village performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will create a new planning and response capability for the Village.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Village CEMP will remain undeveloped</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Village CEMP will remain undeveloped		
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Village CEMP will remain undeveloped										

Action 2025-AlleganyV-09. Recycling/Transfer Facility Remodeling

Lead Agency:	Public Works										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Recycling/Transfer facility is in the floodplain at West Union and South First Street. It has a holding pond and hazardous materials that could potentially create a hazardous materials (hazmat) situation during flooding events, which may stem from severe storms. The facility is undergoing remodeling so that it will be in compliance with DEC guidelines and the 2020 Building Codes, concerning buildings built within floodplains. Estimated completion is end of 2025.										
Description of the Solution:	Remodel the Recycling/Transfer facility so that it will be in compliance with DEC guidelines and the 2020 Building Codes, concerning buildings built within floodplains.										
Estimated Cost:	High										
Potential Funding Sources:	Village Budget, FEMA HMA, Operating Budget										
Implementation Timeline:	Within 2 years										
Goals Met:	1, 5										
Benefits:	Reduces flood risk at the recycling/transfer facility and assists in the assurance of continuity of operations at the facility.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.										
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.										
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.										
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.										
Climate Change Considerations:	Precipitation projections indicated a highly likelihood of increased rainfall, which may result in a heightened risk of flooding.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facility</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr><tr><td>Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events</td><td>Reduction in response times and delay of critical services in the immediate area.</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.
Action	Evaluation										
No Action	Current problem exists										
Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area										
Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.										

Action 2025-AlleganyV-10. Substantial Damage Management Plan

Lead Agency:	Public Works										
Supporting Agencies:	Code Enforcement, Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Officials in NFIP-participating communities are responsible for regulating all development in SFHAs by issuing permits and enforcing local floodplain requirements, including Substantial Damage, for the repairs of damaged buildings. After any disaster event, they must:</p> <ul style="list-style-type: none"> Determine where the damage occurred within the community and if the damaged structures are in an SFHA. Determine what to use for "market value" and cost to repair; uniformly applying regulations will protect against liability and promote equitable administration. Determine if repairing plus improving the damaged structure equals or exceeds 50% of the structure's pre-damage value. Require permits for floodplain development. <p>The municipality does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The municipality is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.</p>										
Description of the Solution:	<p>The municipality will develop a Substantial Damage Management Plan, following the six-step planning process in 2021 Developing a Substantial Damage Management Plan (https://crsresources.org/files/500/developing_subst_damage_mgmt_plan.pdf). This plan will outline responsibilities for Substantial Damage determinations, determining market value, and permit approval processes following a disaster event.</p>										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will provide a guidance document to determine substantial damage in the Village.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may disproportionately be impacted by substantial damages.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	This action will produce substantial damage guidance for Village officials to use.										
Climate Change Considerations:	Climate change is leading to an increase in frequency and intensity of precipitation events, which also increases flooding and may lead to a main failure.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources following disaster events</td> <td>Resources may not be available during major widespread events</td> </tr> <tr> <td>Establish MOUs with outside agencies to conduct Substantial Damage Determinations</td> <td>A plan outlining responsibility is still necessary to prevent missing important requirements</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources following disaster events	Resources may not be available during major widespread events	Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources following disaster events	Resources may not be available during major widespread events										
Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements										

5. TOWN OF ASHFORD

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Ashford with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Ashford, describes who participated in the planning process, assesses Ashford's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

5.1 HAZARD MITIGATION PLANNING TEAM

The Town of Ashford identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Town Supervisor represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 5-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 5-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: John Pfeffer, Supervisor Address: 9377 Route 240, West Valley NY 14171 Phone Number: 716-801-1838 Email: ashfordnysupervisor@gmail.com	Name/Title: Keith Butcher, Highway Superintendent Address: 5460 Fox Valley Road, West Valley NY 14171 Phone Number: (716) 942-3243 Email: ashfordnysupervisor@gmail.com
National Flood Insurance Program Floodplain Administrator	
Name/Title: Lawrence Feldman, Code Enforcement Officer Address: 9377 Route 240, West Valley NY 14171 Phone Number: 716-942-6016 Ext. 5 Email: lfeldmanceo@gmail.com	

5.2 COMMUNITY PROFILE

The Town of Ashford lies in the north-central part of Cattaraugus County in western New York State. The Town of Ashford has a total area of 51.9 square miles. Cattaraugus Creek, Connoisarauley Creek, Gooseneck Creek, Indian Creek, Buttermilk Creek, and Nigh Creek all flow through the town. The town is bordered to the north by the Towns of Concord and Sardinia (in Erie County), to the east are the Towns of Yorkshire and Machias, to the south is the Town of Ellicottville, and to the west is the Town of East Otto.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 4 percent of the

population is 5 years of age or younger, 23.9 percent is 65 years of age or older, 0 percent is non-English speaking, 5.5 percent is below the poverty threshold, and 18.7 percent is considered disabled.

5.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Ashford performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Ashford to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

5.3.1 Planning and Regulatory Capability and Integration

Table 5-2 summarizes the planning and regulatory tools that are available to Ashford.

Table 5-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law #2 2006: New York State Uniform Prevention and Building Code	Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk?				
This local law shall provide for administration and enforcement of the New York State Uniform Fire Protection and Building Code (Uniform Code) in the Town of Ashford. This local law is adopted pursuant to Section 10 of Article 2 of the Municipal Home Rule Law. Except as otherwise provided within this law, state law, or within the Uniform Code, all premises regardless of use, are subject to the provisions which follow.				
Zoning/Land Use Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Subdivision Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Site Plan Code How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Stormwater Management Code How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Post-Disaster Recovery/ Reconstruction Code How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Real Estate Disclosure Requirements How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to “caveat emptor,” a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
Growth Management How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Environmental Protection Ordinance(s) How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Flood Damage Prevention Ordinance How has or will this be integrated with the HMP and how does this reduce risk? It is the purpose of this local law to promote the public health, safety, and general welfare, to reduce degradation of the environment, and to minimize public and private losses due to flood conditions in specific areas by provisions designed to: <ol style="list-style-type: none">1. regulate uses which are dangerous to health, safety and property due to water or erosion hazards, or which result in damaging increases in erosion or in flood heights or velocities;2. require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction;3. control the alteration of natural floodplains, stream channels, and natural protective barriers which are involved in the accommodation of flood waters;4. control filling, grading, dredging, and other development which may increase erosion or flood damages;5. regulate the construction of flood barriers which will unnaturally divert flood waters, or which may increase flood hazards to other lands; and6. qualify and maintain participation in the National Flood Insurance program7. provide minimum lot size, setbacks, and other standards to regulate development.	Yes	Local Law #1, 1988 – Flood Damage Prevention	Local	Building Inspector / Code Enforcement
Wellhead Protection How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Emergency Management Ordinance How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Climate Change Ordinance How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Other How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
PLANNING DOCUMENTS				
General/Comprehensive Plan How has or will this be integrated with the HMP and how does this reduce risk? The Master Plan includes goals to minimize soil erosion and flooding caused from development planned in the two identified planning districts, preserve the benthic and biota in the Special Flood Hazard Area, maintain sufficient emergency services, support and expand the local tourism economy, and draft the Town of Ashford Zoning Code. The Master Plan is referred to in the following plans and codes: Zoning, Urban Development, Short Term Funding, Agriculture Protection, Water/Wastewater Development	Yes	Town of Ashford NY Master Plan, 8/14/2019	Local	Town Board/Planning Board
Capital Improvement Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Disaster Debris Management Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Floodplain Management or Watershed Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Stormwater Management Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Open Space Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Urban Water Management Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Habitat Conservation Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Economic Development Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Community Wildfire Protection Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Community Forest Management Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-

Public Health Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Other How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-

5.3.2 Development and Permitting Capability

Table 5-3 summarizes the capabilities of Ashford to oversee and track development.

Table 5-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?		
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	Yes	Code Enforcement
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	Code Enforcement
Do you have a buildable land inventory?	Yes	Available in the Town Master Plan
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 		
Describe the level of buildout in your jurisdiction.	N/A	According to the 2019 Master Plan, 23.33 percent of the Town's land is vacant and could be used for future development.

5.3.3 Administrative and Technical Capability

Table 5-4 summarizes potential staff and personnel resources available to Ashford and their current responsibilities that contribute to hazard mitigation.

Table 5-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	Town Board
Zoning Board of Adjustment	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	Highway Department
Construction/Building/Code Enforcement Department	Yes	Code Enforcement
Emergency Management/Public Safety Department	Yes	Supervisor is the Emergency Manager
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	No	-
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	Yes	Code Enforcement
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	Yes	Supervisor is the Emergency Manager
Grant writers	No	-
Resilience Officer	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

5.3.4 Fiscal Capability

Table 5-5 summarizes financial resources available to Ashford.

Table 5-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	No
User fees for water, sewer, gas, or electric service	No
Impact fees for homebuyers or developers of new development/homes	No
Stormwater utility fee	No
Incur debt through general obligation bonds	No
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	No
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

5.3.5 Education and Outreach Capability

Table 5-6 summarizes the education and outreach resources available to Ashford.

Table 5-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Town Clerk Office
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	Yes	Town of Ashford website
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	Yes	Town of Ashford website
Natural disaster/safety programs in place for schools	Yes	WVCS works with Town of Ashford for a sheltering agreement in case of emergency evacuation

Outreach Resources	Available? (Yes/No)	Comment
Organizations that conduct outreach to socially vulnerable populations and underserved populations	Yes	West Valley Senior Citizens, West Valley Food Pantry, Community Clothes Closet, Local Churches
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	Yes	Town of Ashford website, CODE RED PHONE/TEXT/TTD notification system

5.3.6 Community Classifications

Table 5-7 summarizes classifications for community programs available to Ashford.

Table 5-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

5.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 5-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 5-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Interruption	Moderate
Wildfire	Moderate
Flood	Moderate

5.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 5-1 is responsible for maintaining this information.

5.4.1 NFIP Statistics

Table 5-9 summarizes the NFIP policy and claim statistics for Ashford.

Table 5-9. Ashford NFIP Summary of Policy and Claim Statistics

# Policies	4
# Claims (Losses)	12
Total Loss Payments	\$37,283
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

5.4.2 Flood Vulnerability Summary

Table 5-10 provides a summary of the NFIP program in Ashford.

Table 5-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	

NFIP Topic	Comments
Describe areas prone to flooding in your jurisdiction.	Low lying homes in previously flood damaged areas, homes and businesses in floodplain, homes and businesses adjacent to creeks that flood
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Unknown
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Unknown
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	Unknown
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	Four via the Cattaraugus county land bank and FEMA grants
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Building Inspector / Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	If the improvement is valued at 50 percent or more of the existing structure's value.
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: November 28, 2016 CAV: December 23, 1992
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law #1, 1988 – Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	March 11, 1998

NFIP Topic	Comments
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	The planning board and CEO would review variances related to flood potential or similar modifications.
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

5.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 5-11 through Table 5-13.

Table 5-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				
Total Permits	9	0	0	9
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 5-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any recent major development or infrastructure occurred between 2019 to present.

* Only location-specific hazard zones or vulnerabilities identified.

Table 5-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any known or anticipated major development or infrastructure in the next five years.

5.6 JURISDICTIONAL RISK ASSESSMENT

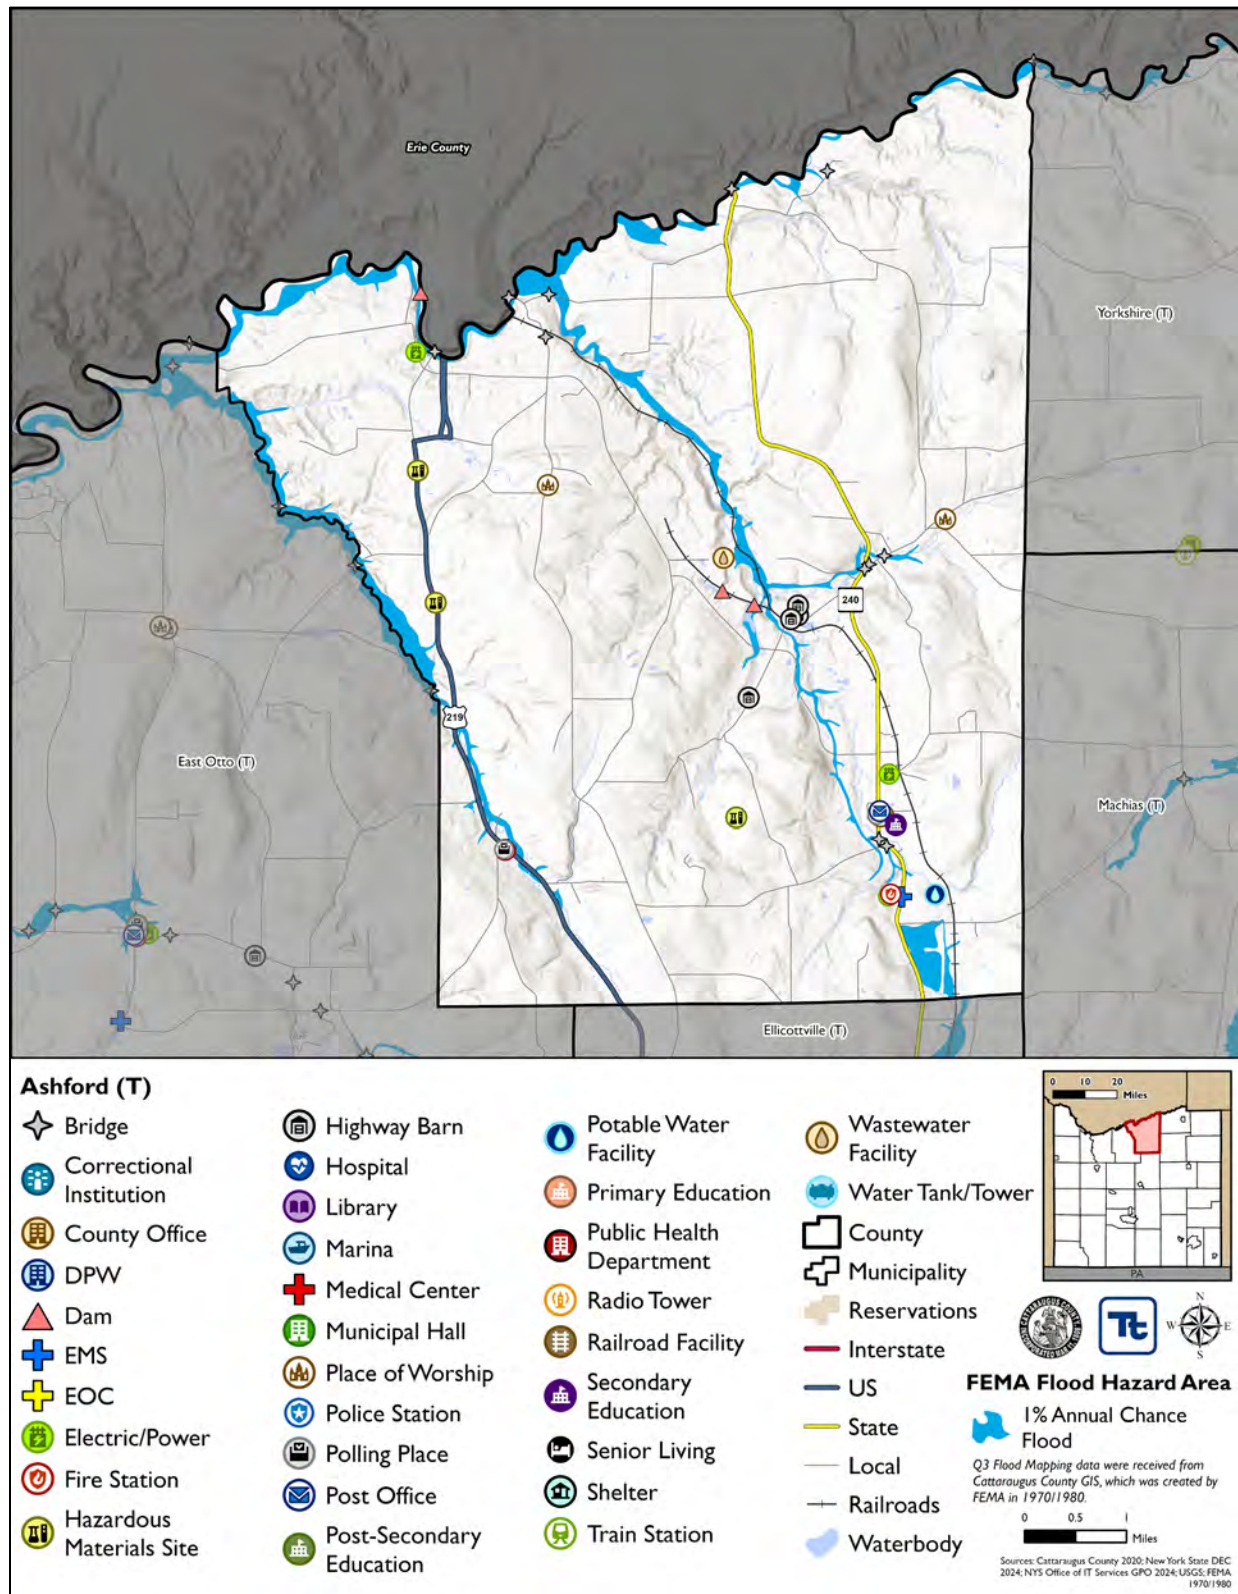

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Ashford's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

5.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 5-1 through Figure 5-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Ashford has significant exposure. The maps show the location of potential new development, where available.

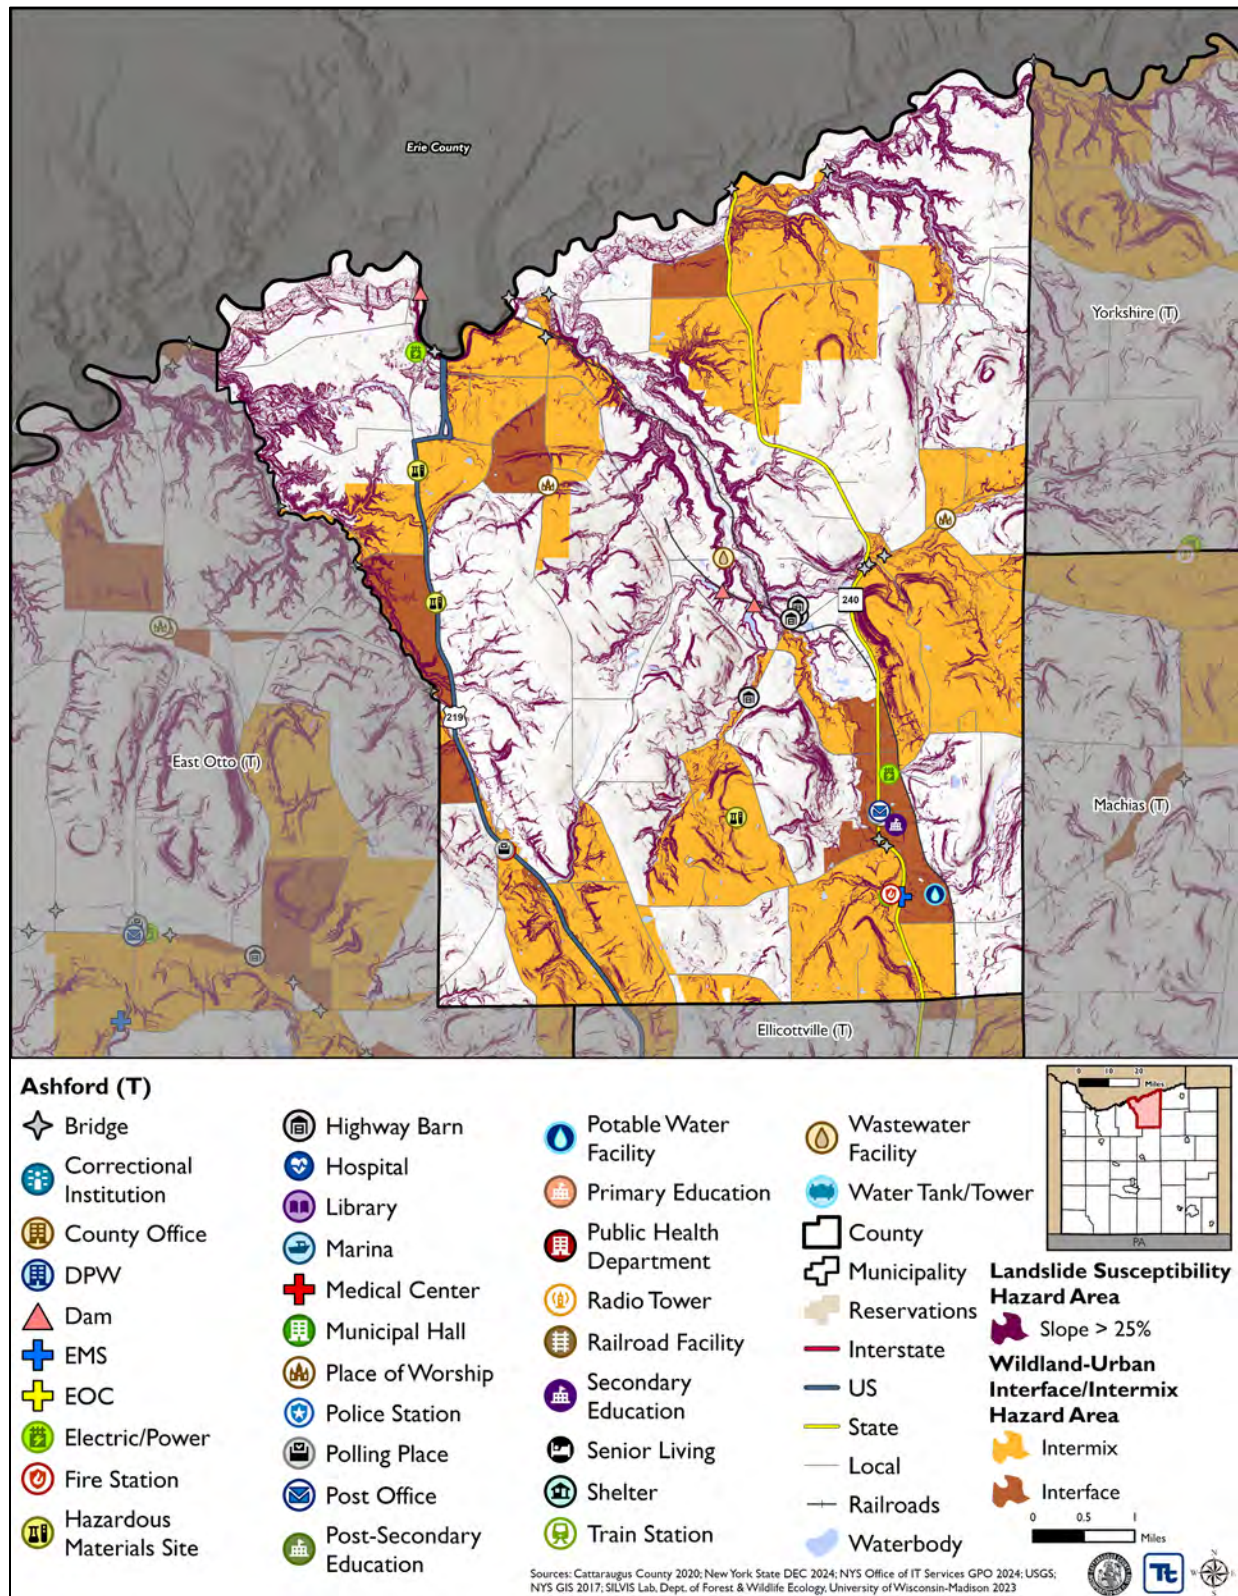

Figure 5-1. Ashford Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 5-2. Ashford Landslide and Wildfire Hazard Area Extent and Location Map

5.6.2 Hazard Event History

The history of natural and non-natural hazard events in Ashford is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 5-14 provides details on loss and damage in Ashford during hazard events since the last hazard mitigation plan update.

Table 5-14. Hazard Event History in Ashford

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Ashford
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur any documented damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town adhered to required mandates. There was a \$250,000 in revenue loss to Town.
January 12, 2020	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur any documented damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur any documented damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur any documented damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur any documented damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur any documented damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not incur any documented damage or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur any documented damage or losses.
March 6, 2022	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Town did not incur any documented damage or losses.

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Ashford
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Town did not incur any documented damage or losses.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

5.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Ashford .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Ashford reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town agreed with the preliminary rankings.

Table 5-15 shows Ashford's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 5-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Medium
Flood	Medium
Landslide	Low
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 5-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 5-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Ashford 02	Bridge	X	-	2025-AshfordT-14	-
Ashford 03	Bridge	X	-	2025-AshfordT-14	-
Ashford 30	Bridge	X	-	2025-AshfordT-14	-
Ashford 33	Bridge	X	-	2025-AshfordT-14	-
Ashford 37	Bridge	X	-	2025-AshfordT-14	-
East Otto 05	Bridge	X	-	2025-AshfordT-14	-

Source: Cattaraugus County 2024

5.6.4 Identified Issues

After a review of Ashford's hazard event history, hazard rankings, hazard location, and current capabilities, Ashford identified the following vulnerabilities within the community:

- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Town needs to identify locations for the placement of temporary sheltering. The Town will investigate the use of the school, highway garage, and local churches as potential locations.
- The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The Town is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.
- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- The Town has dams within its jurisdiction. Despite not being identified as high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in

its path. Although numerous Town roads are exposed to the landslide hazard, there is not an inventory of these roads which may be impacted by landslides, nor is there a local law restricting construction on areas with steep slopes.

- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. Roads in the Ashford Triangle (between Route 240 and White Street) may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding. Although the town has no repetitive loss properties, homes located in this area are prone to flooding during high water events.
- The Town of Ashford lacks a zoning code. The Town Master Plan identifies the development of a zoning ordinance as a goal. A zoning code regulates the built environment, outlining allowed building uses, densities, sizes, and other associated characteristics. As a result, incorporating hazard mitigation principles into the zoning code can help jurisdictions ensure that their communities are more resilient.
- The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. The culvert on Fox Valley Road is undersized or has been damaged from instances of flooding and the debris caused by severe storms and severe winter winters.
- Comsaurally Road has been eroded due to floodwaters stemming from severe storms and melted snow from severe winter storms. The Town must identify and implement erosion-reducing measures.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Ashford 02
 - Ashford 03
 - Ashford 30
 - Ashford 33
 - Ashford 37
 - East Otto 05

5.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

5.7.1 Past Mitigation Action Status

Table 5-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

5.7.2 Additional Mitigation Efforts

Ashford did not identify any additional mitigation efforts completed since the last HMP.

DRAFT

Table 5-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Ashford-001	Flood Damage Prevention Ordinance	Flood	FPA	<p>Problem: The Town of Ashford is unaware of the location of the flood damage prevention ordinance.</p> <p>Solution: The town will adopt an updated flood damage prevention ordinance to maintain NFIP compliance.</p>	<p>1. Completed</p> <p>2. The County has the local law stored. NYS DEC confirmed the copy was correct.</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. The County has the local law stored. NYS DEC confirmed the copy was correct.</p>
2020-Ashford-002	FPA Training	Flood	Administration	<p>Problem: Floodplain administration staff require additional training.</p> <p>Solution: The Town FPA and staff who assist with floodplain administration will attend trainings and workshops offered by FEMA and NYS to develop additional floodplain administration skills.</p>	<p>1. In Progress</p> <p>2. Searching for viable training opportunities</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Ashford-003	Wildfire Outreach	Wildfire	Administration	<p>Problem: Additional public education on wildfire risk is needed.</p> <p>Solution: The town will conduct outreach to residents, business owners, and organizations about what they can do to protect their structures from wildfires.</p>	<p>1. In Progress</p> <p>2. Outreach is conducted via social media and CODE RED phone alerts to inform public of NY burn ban and any additional wildfire potential outside of burn ban. Town will work to create materials containing mitigation measures residents and business owners can take.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Ashford-004	Identification of Temporary and Permanent	All Hazards	Administration	<p>Problem: The Town of Ashford needs to identify locations for the placement of temporary housing and permanent housing.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Change to temporary sheltering</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
	Housing Locations			Solution: The Town of Ashford will work with Cattaraugus County to identify regional locations for temporary and permanent housing.		
2020-Ashford-005	Zoning Ordinance	All Hazards	Administration	<p>Problem: The Town of Ashford lacks a zoning code. The Town Master Plan identifies the development of a zoning ordinance as a goal.</p> <p>Solution: The town will develop a zoning ordinance, using information from the hazard mitigation plan.</p>	<p>1. No Progress 2. Town prioritized other projects</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>
2020-Ashford-006	Emergency Operations Plan	All Hazards	OEM	<p>Problem: The Emergency Operations Plan requires update.</p> <p>Solution: The town will update the Emergency Operations Plan, using information collected during the hazard mitigation plan update.</p>	<p>1. No Progress 2. Town prioritized other projects</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>
2020-Ashford-007	Backup Power at Ashford Community Center	Utility Failure	Engineer, OEM, Highway	<p>Problem: The Ashford Community Center requires backup power. The Center serves as a shelter for students at West Valley Central. Critical facilities require backup power.</p> <p>Solution: The Town Engineer will research what size generator is necessary to supply backup power to the Ashford Community Center. The town will then install the backup power generator and necessary electrical components.</p>	<p>1. Completed 2. Generator was installed</p>	<p>1. Discontinue 2. Not applicable 3. Generator was installed</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Ashford-008	Backup Power at Highway Barn	Utility Failure	Engineer, OEM, Highway	<p>Problem: Critical facilities require backup power. The Highway Barn lacks a backup power source. Parents from the school depend on the Highway Barn for sheltering.</p> <p>Solution: The Town Engineer will research what size generator is necessary to supply backup power to the Highway Barn. The town will then install a backup power generator and necessary electrical components.</p>	1. Completed 2. Generator was installed	1. Discontinue 2. Not applicable 3. Generator was installed
2020-Ashford-009	Upsize Fox Valley Road Culvert	Flood, Severe Storm	Highway Department	<p>Problem: The culvert on Fox Valley Road near Stady is undersized.</p> <p>Solution: The Highway Department will replace the culvert with a larger sized culvert.</p>	1. No Progress 2. Funding constraints	1. Include 2. Not applicable 3. Not applicable
2020-Ashford-010	Flood Mitigation in Ashford Triangle	Flood, Severe Storm	NFIP Floodplain Administrator, supported by homeowners	<p>Problem: Although the town has no repetitive loss properties, homes located in the Ashford triangle (between Route 240 and White Street) are prone to flooding during high water events.</p> <p>Solution: Conduct outreach to 30 flood-prone property owners and provide information on mitigation alternatives. After preferred mitigation measures are identified, collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/purchase/moving/elevating residential homes in the flood prone areas</p>	1. No Progress 2. Homeowners are unwilling to relocate/sell	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				that experience frequent flooding (high risk areas).		
2020-Ashford-011	Comsourally Road Erosion Protection	Severe Storm, Landslide	Engineer, Highway Department	<p>Problem: Comsourally Road has a history of erosion which threatens the roadway during storm events.</p> <p>Solution: The Town Engineer will conduct an engineering study to determine the causes of erosion and the most cost-effective mitigation actions to prevent future erosion events. The Highway Department will conduct the identified roadway improvements.</p>	<p>1. No Progress</p> <p>2. Funding constraints</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Ashford-012	Landslide Study	Landslide	Engineer	<p>Problem: Numerous town roads are exposed to landslide.</p> <p>Solution: The Town Engineer will conduct an assessment to determine the extent of the landslide risk and potential mitigation actions that can be put in place. The Highway Department will conduct cost effective mitigation actions once identified.</p>	<p>1. In Progress</p> <p>2. FEMA funding acquired to develop mitigation strategies</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

5.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Ashford participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Ashford would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 5-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 5-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 5-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X				X					X
Flood	X	X		X	X		X		X	X
Landslide	X	X			X					X
Pandemic	X			X			X			X
Severe Storm	X	X			X				X	X
Severe Winter Storm	X	X			X				X	X
Utility Failure	X								X	X
Wildfire	X			X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 5-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-AshfordT-01	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-AshfordT-02	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-AshfordT-03	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-AshfordT-04	Temporary Sheltering	1	0	1	1	1	1	0	1	1	1	1	1	1	0	11	High
2025-AshfordT-05	Substantial Damage Management Plan	1	1	1	1	1	1	1	1	1	1	1	1	1	0	13	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-AshfordT-01. Floodplain Management Training

Lead Agency:	Code Enforcement										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.										
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 3, 4										
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.										
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.										
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.										
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.										
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.										
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Hire outside contractors for floodplain administration</td><td>Costly</td></tr><tr><td>Establish shared service agreements for floodplain administration from neighboring municipalities</td><td>Neighboring municipalities are unlikely to have the staff capacity to take on this role</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Hire outside contractors for floodplain administration	Costly	Establish shared service agreements for floodplain administration from neighboring municipalities	Neighboring municipalities are unlikely to have the staff capacity to take on this role
Action	Evaluation										
No Action	Current problem exists										
Hire outside contractors for floodplain administration	Costly										
Establish shared service agreements for floodplain administration from neighboring municipalities	Neighboring municipalities are unlikely to have the staff capacity to take on this role										

Action 2025-AshfordT-02. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Town</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-AshfordT-03. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-AshfordT-04. Temporary Sheltering

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County Office of Emergency Services, Neighboring Jurisdictions, American Red Cross										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Town needs to identify locations for the placement of temporary sheltering. The Town will investigate the use of the school, highway garage, and local churches as potential locations.										
Description of the Solution:	The Town Supervisor will lead efforts to identify a suitable location to temporarily relocate residents or visitors in need of temporary sheltering. The Town will consider options to partner with neighboring jurisdictions for a regional location. The Town will contact the Cattaraugus County Office of Emergency Services for assistance as needed to identify a suitable, approved location.										
Estimated Cost:	Medium										
Potential Funding Sources:	Town Budget, County Budget, Neighboring Jurisdictions, American Red Cross, HSGP										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 4, 6										
Benefits:	Providing a safe, climate-controlled location for individuals in need following an emergency can provide a sense of gratitude and normalcy to an otherwise negative event. Removing individuals from at-risk locations and offering a temporary locations for impacted persons to gather, increases the safety of the overall community.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations are often the most risk during emergencies and disaster events. Offering a safe location for these populations can ensure their health is looked after and they are removed from harm's way.										
Impact on Future Development:	The temporary sheltering facility will be able to support population increases brought in from potential future development.										
Impact on Critical Facilities/Lifelines:	This action would create, or expand on already existing, critical facilities, as sheltering locations are critical facilities.										
Impact on Capabilities:	This action will create a new capability of the Town by offering a resource for its visitors and residents to utilize should they be in need of temporary sheltering.										
Climate Change Considerations:	The changing climate may lead to the Town, its residents, and visitors being exposed to hazards more frequently. Extreme temperatures have occurred more often in recent years which lead to drought; heavier rainfalls during severe storms have increased the occurrence of flooding. A temporary sheltering facility can provide a safe location for impacted individuals.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Utilize County facilities</td> <td>May require signed agreements; reliant on County opening facilities</td> </tr> <tr> <td>Utilize American Red Cross facilities</td> <td>Reliant on American Red Cross opening a facility</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Utilize County facilities	May require signed agreements; reliant on County opening facilities	Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility

No Action	Current problem exists										
Utilize County facilities	May require signed agreements; reliant on County opening facilities										
Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility										

Action 2025-AshfordT-05. Substantial Damage Management Plan

Lead Agency:	Highway Department										
Supporting Agencies:	Code Enforcement, Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	<p>Officials in NFIP-participating communities are responsible for regulating all development in SFHAs by issuing permits and enforcing local floodplain requirements, including Substantial Damage, for the repairs of damaged buildings. After any disaster event, they must:</p> <ul style="list-style-type: none">• Determine where the damage occurred within the community and if the damaged structures are in an SFHA.• Determine what to use for "market value" and cost to repair; uniformly applying regulations will protect against liability and promote equitable administration.• Determine if repairing plus improving the damaged structure equals or exceeds 50% of the structure's pre-damage value.• Require permits for floodplain development. <p>The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The municipality is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.</p>										
Description of the Solution:	The Town will develop a Substantial Damage Management Plan, following the six-step planning process in 2021 Developing a Substantial Damage Management Plan (https://crsresources.org/files/500/developing_subst_damage_mgmt_plan.pdf). This plan will outline responsibilities for Substantial Damage determinations, determining market value, and permit approval processes following a disaster event.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will provide a guidance document to determine substantial damage in the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may disproportionately be impacted by substantial damages.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	This action will produce substantial damage guidance for Town officials to use.										
Climate Change Considerations:	Climate change is leading to an increase in frequency and intensity of precipitation events, which also increases flooding and may lead to a main failure.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources following disaster events</td><td>Resources may not be available during major widespread events</td></tr><tr><td>Establish MOUs with outside agencies to conduct Substantial Damage Determinations</td><td>A plan outlining responsibility is still necessary to prevent missing important requirements</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources following disaster events	Resources may not be available during major widespread events	Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources following disaster events	Resources may not be available during major widespread events										
Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements										

Action 2025-AshfordT-06. Pandemic Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-AshfordT-07. Dam Owner Partnership

Lead Agency:	Town Board		
Supporting Agencies:	NYS DEC, Dam Owners		
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	The Town has dams within its jurisdiction. Despite not being high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.		
Description of the Solution:	The Town will work with the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 2, 3		
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.		
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within for those living near areas where the dams are located.		
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.		
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.		
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.		
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Town will be unaware of any safety concerns for the dam or its condition
	Utilize information from NYS DEC		Owners may not be required to submit a safety plan to the State
	Utilize information from the National Inventory of Dams		Not all dams are listed on the inventory

Action 2025-AshfordT-08. Steep Slope Ordinance

Lead Agency:	Code Enforcement		
Supporting Agencies:	Engineering, Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Although numerous Town roads are exposed to the landslide hazard, there is not an inventory of these roads which may be impacted by landslides, nor is there a local law restricting construction on areas with steep slopes.		
Description of the Solution:	The Town Engineer will complete an assessment to identify roads in Town which have slopes at grades greater than 20 percent. Once identified, Code Enforcement will work with Engineering and the Town Board to develop a local law restricting future development in these identified hazard areas.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, Town Budget		
Implementation Timeline:	3 years		
Goals Met:	1, 4, 6		
Benefits:	This action will identify locations with steep grades (above 20 percent) and lead to the adoption of a local law to restrict future development in these hazard areas. Furthermore, the identification of the locations with the steep grades will provide the Highway Department and Engineer with future locations to implement mitigation measures to protect any nearby property and infrastructure.		
Impact on Socially Vulnerable Populations:	This action may identify socially vulnerable populations whose properties may be at risk to the landslide hazard. If identified, the Town may educate the populations on how to mitigate potential risks.		
Impact on Future Development:	Future development will be restricted in locations with identified steep slopes.		
Impact on Critical Facilities/Lifelines:	This action has the potential to identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action improves the Town's regulatory capabilities.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Restrict development on slopes greater than 5 percent grade		May be too restrictive and discourage any future development
	Create inventory but do not develop local law		Would not restrict future development, could increase at risk properties and structures

Action 2025-AshfordT-09. Floodprone Roads

Lead Agency:	Highway Department		
Supporting Agencies:	Code Enforcement, Engineering		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. Roads in the Ashford Triangle (between Route 240 and White Street) may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding. Although the town has no repetitive loss properties, homes located in this area are prone to flooding during high water events.		
Description of the Solution:	The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include: <ul style="list-style-type: none"> Elevation of roadways Installation or improvement of drainage systems Regrading of roadway and soils Resurfacing or reshaping roadways The Town will conduct outreach to properties within the vicinity of the Ashford Triangle to provide information on flood mitigation methods, including structural elevation and property acquisition.		
Estimated Cost:	TBD after mitigation technique is chosen		
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Relocate all flood-prone road system		Not feasible
	Raise all flood prone roads		Cost prohibitive

Action 2025-AshfordT-10. Zoning Code Development

Lead Agency:	Town Board										
Supporting Agencies:	Code Enforcement										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town of Ashford lacks a zoning code. The Town Master Plan identifies the development of a zoning ordinance as a goal. A zoning code regulates the built environment, outlining allowed building uses, densities, sizes, and other associated characteristics. As a result, incorporating hazard mitigation principles into the zoning code can help jurisdictions ensure that their communities are more resilient.										
Description of the Solution:	The Town will develop a zoning code, using information from the hazard mitigation plan and the appropriate under the provisions of § 263 of the Town Law of the State of New York.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 4, 6										
Benefits:	The zoning code will regulate the built environment, outlining allowed building uses, densities, sizes, and other associated characteristics. As a result, incorporating hazard mitigation principles into the zoning code can help jurisdictions ensure that their communities are more resilient.										
Impact on Socially Vulnerable Populations:	A zoning code can restrict development within various hazard areas, including those within flood-prone areas and locations with a higher risk to landslides. This restriction can result in increased safety to the populations which would otherwise build in these areas.										
Impact on Future Development:	The development and adoption of a zoning code can prevent or restrict future development in hazard areas, reducing risk to persons, property, and the environment.										
Impact on Critical Facilities/Lifelines:	Zoning codes can assist in outlining the development of an area which can assist when identifying response areas in the safety and security lifeline and evacuation priority areas within the transportation lifeline.										
Impact on Capabilities:	This action will create a new comprehensive capability for the Town.										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events, potentially leading to an increase in the occurrence of flooding conditions and landslides. The development and adoption of a zoning code can prevent or restrict future development in hazard areas, reducing risk to persons, property, and the environment.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Create code without following State provisions</td><td>May not reach standards</td></tr><tr><td>Create code without incorporating hazard mitigation principles</td><td>May not promote resiliency as much as possible</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Create code without following State provisions	May not reach standards	Create code without incorporating hazard mitigation principles	May not promote resiliency as much as possible		
Action	Evaluation										
No Action	Current problem exists										
Create code without following State provisions	May not reach standards										
Create code without incorporating hazard mitigation principles	May not promote resiliency as much as possible										

Action 2025-AshfordT-11. Comprehensive Emergency Management Plan Update

Lead Agency:	Town Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Town will update the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Town will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Town will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Town to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Town performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Town CEMP will remain undeveloped</td> </tr> </tbody> </table>		Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped	
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped										

Action 2025-AshfordT-12. Undersized Culverts

Lead Agency:	Highway										
Supporting Agencies:	Code Enforcement, Engineer										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. The culvert on Fox Valley Road is undersized or has been damaged from instances of flooding and the debris caused by severe storms and severe winter winters.										
Description of the Solution:	The Town Engineer will complete an engineering survey of the culverts in Town that are undersized and contribute to flooding to determine the proper size necessary to provide stormwater capacity. The Town Highway Department will complete the necessary upsizing for the culverts.										
Estimated Cost:	TBD after study is complete										
Potential Funding Sources:	FEMA HMA, CHIPS, Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4										
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.										
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.										
Impact on Capabilities:	Identifying the culverts that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes culvert sizes to meet changing stormwater needs as the result of climate change.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Remove roadway</td> <td>Roadway cannot be removed</td> </tr> <tr> <td>Raingardens</td> <td>Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Remove roadway	Roadway cannot be removed	Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.		
Action	Evaluation										
No Action	Current problem exists										
Remove roadway	Roadway cannot be removed										
Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.										

Action 2025-AshfordT-13. Comsourally Road Erosion

Lead Agency:	Highway Department		
Supporting Agencies:	Code Enforcement, Engineering		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Comsourally Road has been eroded due to floodwaters stemming from severe storms and melted snow from severe winter storms. The Town must identify and implement erosion-reducing measures.		
Description of the Solution:	The Town Engineer and Highway Department will identify and implement erosion-reducing measures. These measures may include: <ul style="list-style-type: none"> • Elevating the roadway • Improving drainage • Strengthening underlying soils • Realigning roads and structures • Strengthening support structures • Armoring vulnerable embankments 		
Estimated Cost:	High		
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along eroded and flood-prone roads.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. This action will mitigate erosion along roadways and reduce likelihood of flooding impacts.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove ditches from roadways		Would likely increase flood risk
	Pave all roads with permeable surfaces		Cost prohibitive

Action 2025-AshfordT-14. Bridge Evaluations

Lead Agency:	Highway Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none">Ashford 02Ashford 03Ashford 30Ashford 33Ashford 37East Otto 05										
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Remove bridges</td><td>May cause significant traffic problems</td></tr><tr><td>Replace bridges</td><td>Cost prohibitive</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Remove bridges	May cause significant traffic problems	Replace bridges	Cost prohibitive

Replace bridges	Cost prohibitive										

DRAFT

6. TOWN OF CARROLLTON

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Carrollton with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Carrollton, describes who participated in the planning process, assesses Carrollton's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

6.1 HAZARD MITIGATION PLANNING TEAM

The Town of Carrollton identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Highway Superintendent represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 6-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 6-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Michael Fox, Highway Superintendent Address: 950 Main Street, West Valley, NY 14171 Phone Number: 716-925-8477 Email: mikepfox@hotmail.com	Name/Title: Robert Rinfrette, Supervisor Address: 125 Parkside Drive, Limestone NY 14753 Phone Number: 716-904-0070 Email: Bryson91@hotmail.com
National Flood Insurance Program Floodplain Administrator	
Name/Title: Ben McDonnell, Code Enforcement Officer Address: 640 Main Street, Limestone NY 14753 Phone Number: 716-925-8842 Email: towncodecarrollton@outlook.com	

6.2 COMMUNITY PROFILE

The Town of Carrollton lies in the south-central part of Cattaraugus County in western New York State. The Town of Carrollton has a total area of 52.4 square miles. The Alleghany River, Chipmonk Creek, Ten Mile Creek, Tunegawant Creek, and Windfall Creek all flow through the town. The town is bordered to the north by the Town of Great Valley, to the northwest is the City of Salamanca and the Town of Salamanca, to the west is the Town of Red House, and the southern border of the town is the state of Pennsylvania.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 4.7 percent of the

population is 5 years of age or younger, 22.2 percent is 65 years of age or older, 0.6 percent is non-English speaking, 12.4 percent is below the poverty threshold, and 16.3 percent is considered disabled.

6.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Carrollton performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Carrollton to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

6.3.1 Planning and Regulatory Capability and Integration

Table 6-2 summarizes the planning and regulatory tools that are available to Carrollton.

Table 6-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 2022.1, providing for the Administration & Enforcement of the NY State Uniform Fire Prevention & Building Code 2018-1	State and Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk?				
Code applies to construction, alteration, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.				
Zoning/Land Use Code	Yes	Zoning Ordinance Law/Land Use Management Plan, 2014-1	Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
<p>It is the intent and purpose of this law to promote the public health, safety, and general welfare. Specifically, the purposes of this law are:</p> <ol style="list-style-type: none"> 1. To secure safety for the residents of the Town of Carrollton from flood, fire and other dangers. 2. To provide adequate light and air. 3. To prevent the overcrowding of land and to avoid undue concentration of population. 4. To prevent congestion on the streets and roadways in the Town. 5. To facilitate the adequate provision of transportation, water, sewerage, schools, parks, and other public requirements. 6. To make provision for, in so far as conditions may permit, the accommodation of solar energy systems and equipment and access to sunlight necessary, therefore. 7. To implement the policies and guidelines contained in the Comprehensive Plan, which was adopted by the Town of Carrollton on August 11, 2010. 				
Subdivision Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Site Plan Code	Yes	Zoning Ordinance Law/Land Use Management Plan, 2014-1	Local	Code Enforcement Officer
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>The purpose of site plan approval is to determine compliance with the objectives of this article in zoning districts where inappropriate development may cause a conflict between uses in the same or adjoining zoning district by creating unhealthful and unsafe conditions and thereby adversely affect the public health, safety, and general welfare.</p>				
Stormwater Management Code	Yes	Zoning Ordinance Law/Land Use Management Plan, 2014-1	Local	Code Enforcement Officer
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>To protect residents and property from adverse effects of stormwater runoff caused by the modification of existing drainage systems during construction, reconstruction or development on one or more parcels of land, and to promote water quality.</p>				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
<p>How has or will this be integrated with the HMP and how does this reduce risk?</p> <p>In addition to facing potential liability for failing to disclose under the exceptions to "caveat emptor," a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.</p>				
Growth Management	Yes	Zoning Ordinance Law/Land Use Management Plan, 2014-1	Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Environmental Protection Ordinance(s)	Yes	Zoning Ordinance Law/Land Use Management Plan, 2014-1	Local	Code Enforcement Officer

How has or will this be integrated with the HMP and how does this reduce risk?

Identifies environmentally sensitive areas to be preserved from damage by development, or establishment of protection measures. This can include, but is not limited to, wetlands, floodplains, and other sensitive ecosystems and the species that reside within them.

Flood Damage Prevention Ordinance	Yes	Local Law 1 of 1987: Flood Damage Prevention	Local	Code Enforcement Officer
--	-----	--	-------	--------------------------

How has or will this be integrated with the HMP and how does this reduce risk?

Promotes public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas.

- A. Regulate uses which are dangerous to health, safety and property due to water or erosion hazards or which result in damaging increases in erosion or in flood heights or velocities.
- B. Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction.
- C. Control the alteration of natural floodplains, stream channels and natural protective barriers which are involved in the accommodation of floodwaters.
- D. Control filling, grading, dredging and other development which may increase erosion or flood damages.
- E. Regulate the construction of flood barriers which will unnaturally divert floodwaters, or which may increase flood hazards to other lands.
- F. Qualify for and maintain participation in the National Flood Insurance Program.

Wellhead Protection	No	-	-	-

PLANNING DOCUMENTS

General/Comprehensive Plan	Yes	Town of Carrollton Comprehensive Plan, 2010	Local	Planning Board
-----------------------------------	-----	---	-------	----------------

How has or will this be integrated with the HMP and how does this reduce risk?

The Town of Carrollton Master Plan identifies the following goals that relate to natural hazards:

- Community Character: To promote and plan a pattern of development that maintains the rural character of the town
- Agriculture: Maintain, protect, and promote forestry and woodland activities
- Environment & Conservation: protect, maintain and enhance the natural rural character of the town
- Economic Outlook: Facilitate, support, and create economic development in the town

Capital Improvement Plan	Yes	Capital Improvement Plan	County	County
---------------------------------	-----	--------------------------	--------	--------

How has or will this be integrated with the HMP and how does this reduce risk?

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
A capital improvement plan helps identify priority areas for development and revitalization that can reduce damages by removing blight and increasing economic resiliency.				
Disaster Debris Management Plan	Yes	Disaster Debris Management Plan	Local, County	County
How has or will this be integrated with the HMP and how does this reduce risk? Minimizing the amount of debris left behind on residential and commercial properties and roadways reduces post-disaster recovery costs and accelerates a return to normalcy following a disaster event.				
Floodplain Management or Watershed Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Stormwater Management Plan	Yes	Stormwater Management Plan	Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk? Ensures the efficient flow of water through and around populated areas to reduce damage to property from flooding. Regulates stormwater that flows in to drinking water supplies and ensures its cleanliness for consumption.				
Open Space Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Urban Water Management Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Habitat Conservation Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Economic Development Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Community Wildfire Protection Plan	Yes	Community Wildfire Protection Plan	State	State
How has or will this be integrated with the HMP and how does this reduce risk? Establishes guidelines for the protection of properties that are vulnerable to wildfire, including the establishment of a debris clearance radius, usage of certain construction materials, and awareness of general fire risk within individual communities.				
Community Forest Management Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?

6.3.2 Development and Permitting Capability

Table 6-3 summarizes the capabilities of Carrollton to oversee and track development.

Table 6-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?		
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	Yes	Code Enforcement Officer
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	Floodplain
Do you have a buildable land inventory?		Available in the Town Master Plan
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 	No	
Describe the level of buildout in your jurisdiction.	N/A	According to the 2010 Master Plan, 3,349 of the Town's 32,671 acres of land is vacant and could be used for future development.

6.3.3 Administrative and Technical Capability

Table 6-4 summarizes potential staff and personnel resources available to Carrollton and their current responsibilities that contribute to hazard mitigation.

Table 6-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	The Planning Board meets the 2nd Tuesday of each month at 6:00 PM at the Municipal Complex, 2nd Floor in the Library. There are five members on the board.
Zoning Board of Adjustment	Yes	There are four members on the board.
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	The Highway Department is responsible for maintenance of the Town's roads.
Construction/Building/Code Enforcement Department	Yes	Code Enforcement Officer is responsible for inspections and ensuring the building code is enforced.
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	Yes	County, Emergency Response
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	Yes	Code Enforcement Officer
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	Yes	Highway Department
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

6.3.4 Fiscal Capability

Table 6-5 summarizes financial resources available to Carrollton.

Table 6-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	No
Stormwater utility fee	No
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

6.3.5 Education and Outreach Capability

Table 6-6 summarizes the education and outreach resources available to Carrollton.

Table 6-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Supervisor
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	Yes	Town Board, Planning Board
Warning systems for hazard events	Yes	Reverse 911, IPAWS, NY Alert
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	Yes	Newspaper

6.3.6 Community Classifications

Table 6-7 summarizes classifications for community programs available to Carrollton.

Table 6-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

6.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 6-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 6-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Interruption	Moderate
Wildfire	Moderate

6.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 6-1 is responsible for maintaining this information.

6.4.1 NFIP Statistics

Table 6-9 summarizes the NFIP policy and claim statistics for Carrollton.

Table 6-9. Carrollton NFIP Summary of Policy and Claim Statistics

# Policies	5
# Claims (Losses)	2
Total Loss Payments	\$0.00
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

6.4.2 Flood Vulnerability Summary

Table 6-10 provides a summary of the NFIP program in Carrollton.

Table 6-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Along the Tunungwant Creek
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	None

NFIP Topic	Comments
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Using state and FEMA standards
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	None
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Using state and FEMA standards
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: May 8, 2020 CAV: October 7, 2003
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 1 of 1987: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	December 15, 2020
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Yes, considers flood risk

NFIP Topic	Comments
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

6.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 6-11 through Table 6-13.

Table 6-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 6-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any recent major development or infrastructure occurred between 2019 to present.

* Only location-specific hazard zones or vulnerabilities identified.

Table 6-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any known or anticipated major development or infrastructure in the next five years.

6.6 JURISDICTIONAL RISK ASSESSMENT

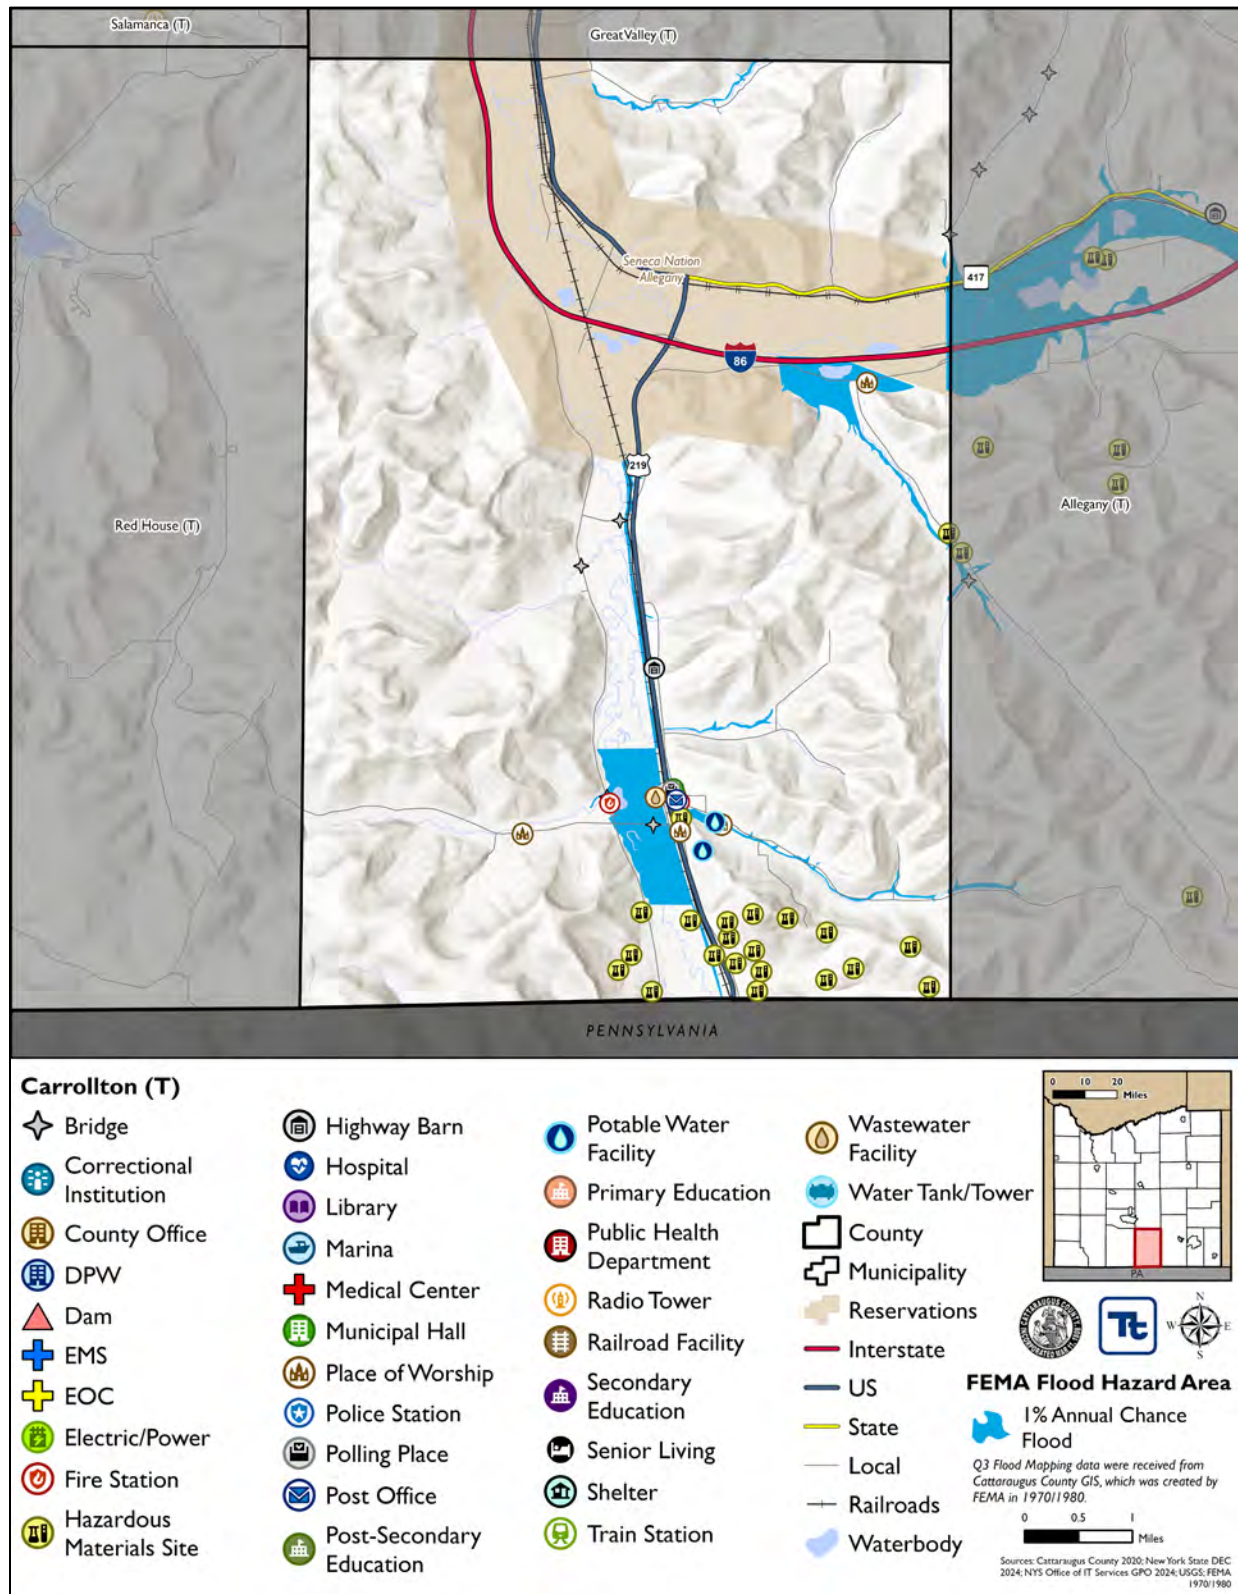

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Carrollton's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

6.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 6-1 through Figure 6-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Carrollton has significant exposure. The maps show the location of potential new development, where available.

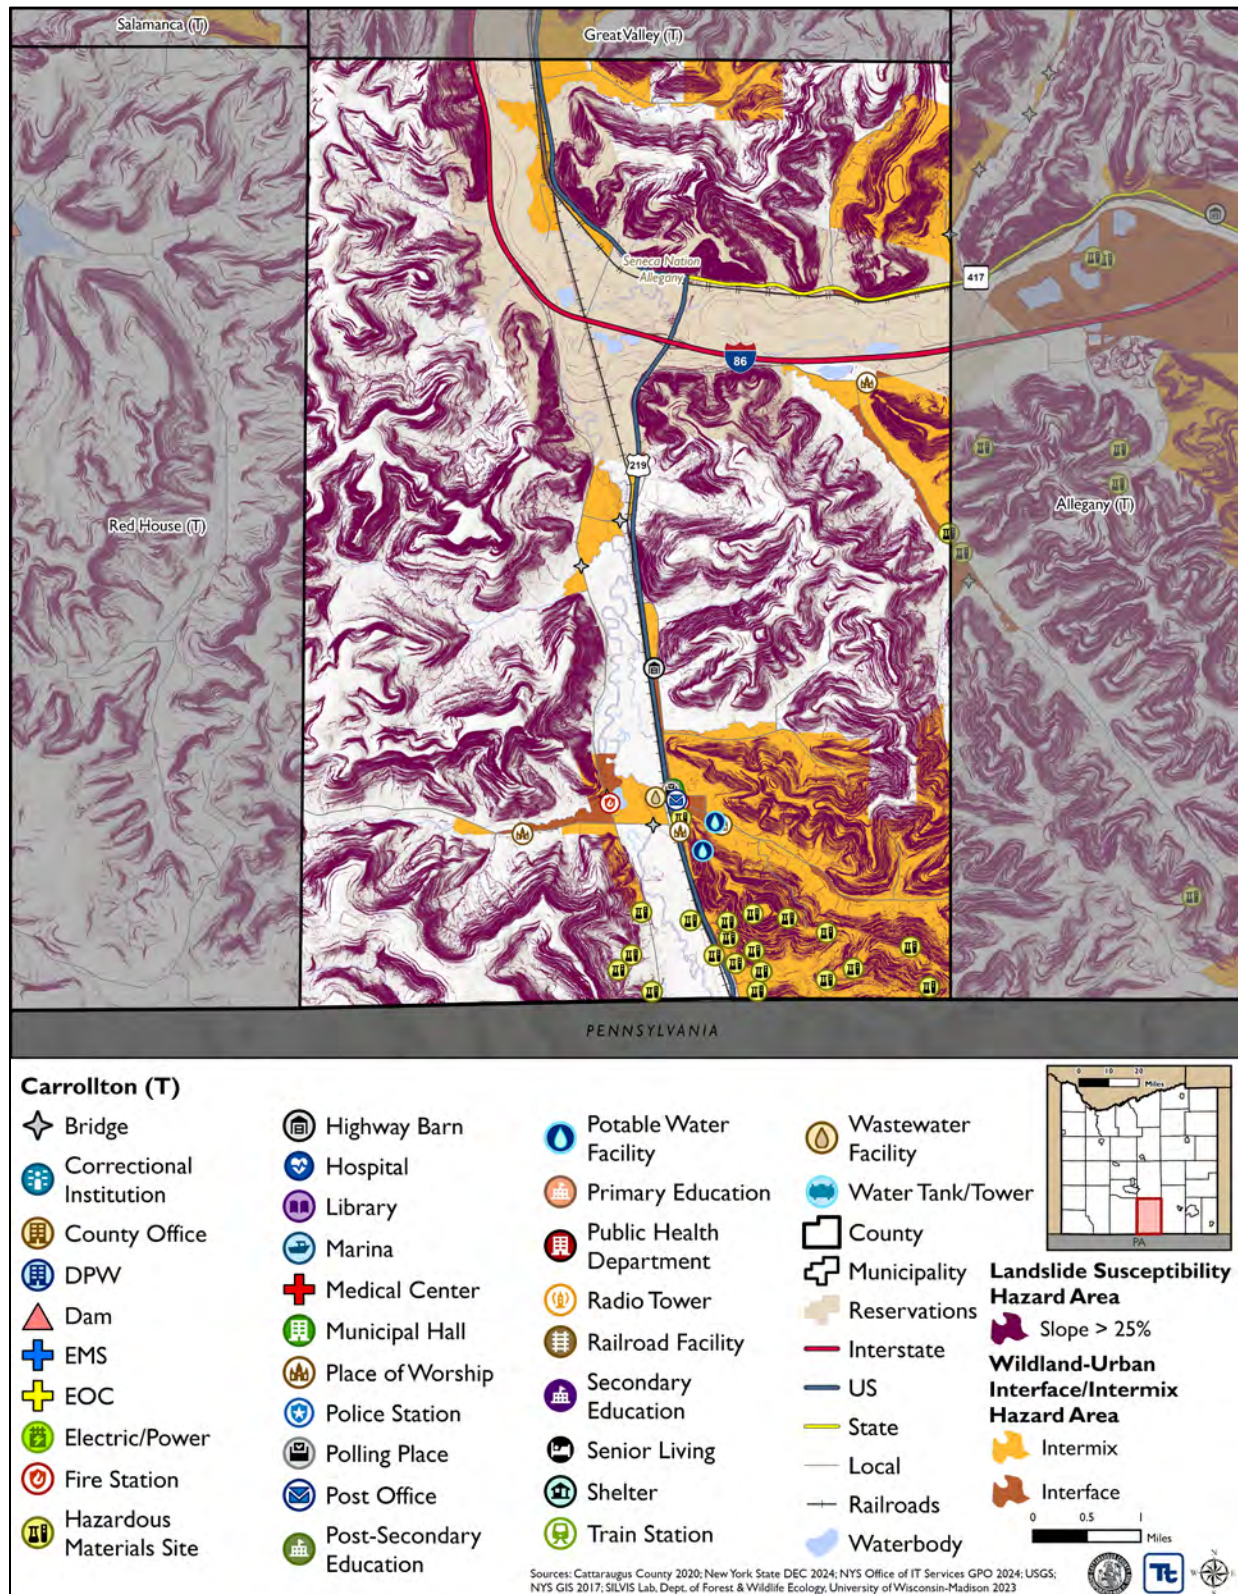

Figure 6-1. Carrollton Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 6-2. Carrollton Landslide and Wildfire Hazard Area Extent and Location Map

6.6.2 Hazard Event History

The history of natural and non-natural hazard events in Carrollton is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 6-14 provides details on loss and damage in Carrollton during hazard events since the last hazard mitigation plan update.

Table 6-14. Hazard Event History in Carrollton

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Carrollton
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur and documented damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town did not incur and documented damage or losses.
January 12, 2020	High Wind	N/A	High wind	The Town did not incur and documented damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur and documented damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur and documented damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur and documented damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur and documented damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur and documented damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not incur and documented damage or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur and documented damage or losses.
March 6, 2022	High Wind	N/A	High wind	The Town did not incur and documented damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Town did not incur and documented damage or losses.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Town did not incur and documented damage or losses.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

6.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Carrollton .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Carrollton reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town made the following changes:

- The hazard ranking for the Dam and Levee Failure hazard was decreased for 'low' to 'No Risk' as there are no dams located in the Town, nor are there any in neighboring jurisdictions which have the potential to impact the Town.

Table 6-15 shows Carrollton's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 6-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	No Risk
Flood	Low
Landslide	High
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 6-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 6-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Carrollton 11	Bridge	X	-	2025-CarrolltonT-12	-
Community Full Gospel Church Christina	Place of Worship	X	-	2025-CarrolltonT-01	-

Town Barn	Highway Barn	X	-	2025-CarrolltonT-01	-

Source: Cattaraugus County 2024

6.6.4 Identified Issues

After a review of Carrollton's hazard event history, hazard rankings, hazard location, and current capabilities, Carrollton identified the following vulnerabilities within the community:

- The Community Full Gospel Church, St. John Baptist Church, Town Municipal Building, and Town Barn are located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Conditions on Parkside Drive make it prone to landslides. Landslides may be able to be mitigated by cutting banks to prevent erosion.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Town needs to identify locations for the placement of temporary sheltering.
- The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- Critical facilities require backup power to ensure continuity of operations. The Municipal Complex does not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels

from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.

- The Leonard Run bridge on Main Street is undersized in relation to the culvert recently installed downstream 200' from Leonard Run to Carry State Route 219. Flooding on the bridge and on Main Street can not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible.
- Due to recent clear-cut logging operations, it is likely that many of the pipes and culverts are going to be inadequate to carry additional runoff. Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts.
- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- The area surrounding Tunungwant Creek is prone to flooding, impacting nearby roads and properties. Tunungwant Creek may have bank erosion issues, threatening encroachment onto nearby roads. Creek banks may become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding. Additional flood mitigation measures may also be considered.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Carrollton 11

6.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

6.7.1 Past Mitigation Action Status

Table 6-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

6.7.2 Additional Mitigation Efforts

Carrollton did not identify any additional mitigation efforts completed since the last HMP.

Table 6-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Carrollton-001	Town Barn	Flood	Highway Dept.	<p>Problem: The Town Barn at US Route 219 is located in the Special Flood Hazard Area. Critical facilities need to be protected to the 500-year flood level.</p> <p>Solution: The town will explore options to protect the facility to the 500-year flood level. Possible actions explored will include floodproofing, flood walls, elevation, and relocation of the facility.</p>	<p>1. No Progress</p> <p>2. Other Town projects were prioritized.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Carrollton-002	St. John Baptist Church	Flood	FPA	<p>Problem: The St. John Baptist Church is a critical facility located in the Special Flood Hazard Area. The facility is privately owned. Critical facilities need to be protected to the 500-year flood level.</p> <p>Solution: The FPA will conduct outreach to the Church to discuss flood exposure and possible mitigation actions that can be taken.</p>	<p>1. No Progress</p> <p>2. Other Town projects were prioritized.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Carrollton-003	Parkside Drive	Landslide	Highway Dept	<p>Problem: Parkside Drive is at risk to landslides. The road is slowly sinking about a half inch a year.</p> <p>Solution: Study slide conditions in the Town of Carrollton on Parkside Drive through a feasibility assessment. Carry out most cost-effective measure to protect against landslides.</p>	<p>1. No Progress</p> <p>2. Funding constraints.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Carrollton-004	FPA Training	Flood	Administration	<p>Problem: Floodplain administration staff require additional training.</p> <p>Solution: The Town FPA and staff who assist with floodplain administration will attend trainings and workshops offered by FEMA and NYS to develop additional floodplain administration skills.</p>	<p>1. No Progress</p> <p>2. Lack of available training.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Carrollton-005	Wildfire Outreach	Wildfire	Administration	<p>Problem: Additional public education on wildfire risk is needed.</p> <p>Solution: The town will conduct outreach to residents, business owners, and organizations about what they can do to protect their structures from wildfires.</p>	<p>1. No Progress</p> <p>2. Funding constraints.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Carrollton-006	Identification of Permanent Housing Locations	All Hazards	Administration	<p>Problem: The Town of Carrollton needs to identify locations for the placement of permanent housing.</p> <p>Solution: The Town of Carrollton will work with Cattaraugus County to identify regional locations for permanent housing.</p>	<p>1. No Progress</p> <p>2. Funding constraints.</p>	<p>1. Include</p> <p>2. Change to temporary sheltering</p> <p>3. Not applicable</p>
2020-Carrollton-007	Update Emergency Operations Plan	All Hazards	OEM	<p>Problem: The town's Emergency Operations Plan requires update.</p> <p>Solution: The town will update the Emergency Operations Plan, integrating information from the Hazard Mitigation Plan update.</p>	<p>1. No Progress</p> <p>2. Other Town projects were prioritized.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Carrollton-008	Backup Power for Town Highway Garage	Utility Failure	Engineer, OEM, Highway	<p>Problem: Backup power sources are necessary to maintain critical services for critical facilities. The Town Highway Garage requires permanent backup power.</p> <p>Solution: The Town Engineer will research what size generator is necessary to supply backup power to the Town Highway Garage (estimated at 15kW). The town will then install a backup power generator and necessary electrical components.</p>	1. Completed 2. Project complete	1. Discontinue 2. Not applicable 3. Project is completed.
2020-Carrollton-009	Backup Power for Town Municipal Complex	Utility Failure	Engineer, OEM, Highway	<p>Problem: Backup power sources are necessary to maintain critical services for critical facilities. The Town Municipal Complex requires permanent backup power.</p> <p>Solution: The Town Engineer will research what size generator is necessary to supply backup power to the Town Municipal Complex. The town will then install a backup power generator and necessary electrical components.</p>	1. No Progress 2. Funding constraints.	1. Include 2. Not applicable 3. Not applicable
2020-Carrollton-010	Backup Power for Water Pumps	Utility Failure	Engineer, OEM, Highway	<p>Problem: Backup power sources are necessary to maintain critical services for critical facilities. The Town Water Pumps requires permanent backup power.</p>	1. Complete 2. The Town purchased an automatic generator in 2024.	1. Discontinue 2. Not applicable 3. The Town purchased an automatic generator in 2024.

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				Solution: The Town Engineer will research what size generator is necessary to supply backup power to the Town Water Pumps. The town will then install a backup power generator and necessary electrical components.		
2020-Carrollton-011	Leonard Run Bridge	Flood, Severe Storm	Engineering	<p>Problem: The Leonard Run bridge on Main Street is undersized in relation to the culvert recently installed downstream 200' from Leonard Run to Carry State Route 219.</p> <p>Solution: The town will conduct an engineering study to determine the appropriate design for a replacement bridge. The town will then replace the bridge to the identified specifications.</p>	<p>1. In Progress</p> <p>2. Scheduled to be replaced via Bridge-NY funding in 2026</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Carrollton-012	Flood Study	Flood, Severe Storm	Engineering	<p>Problem: Due to recent clear-cut logging operations, it is likely that many of the pipes and culverts are going to be inadequate to carry additional runoff.</p> <p>Solution: The town will conduct a flood study to determine if logging has resulted in a change in the floodplain function in the town and if upgrades to culverts and the stormwater system are necessary. If upgrades are necessary, the town will work to make these upgrades.</p>	<p>1. No Progress</p> <p>2. Funding constraints.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

6.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Carrollton participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Carrollton would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 6-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 6-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 6-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure										
Flood	X	X	X	X	X		X	X	X	X
Landslide	X	X			X					X
Pandemic	X			X			X			X
Severe Storm	X	X	X		X			X	X	X
Severe Winter Storm	X	X	X		X			X	X	X
Utility Failure	X	X							X	X
Wildfire	X	X		X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 6-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-CarrolltonT-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-CarrolltonT-02	Landslide Mitigation	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-CarrolltonT-03	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-CarrolltonT-04	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-CarrolltonT-05	Temporary Sheltering	1	0	1	1	1	1	0	1	1	1	1	1	1	0	11	High
2025-CarrolltonT-06	Comprehensive Emergency Management Plan Update	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-CarrolltonT-07	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-CarrolltonT-08	Leonard Run Bridge	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-CarrolltonT-09	Undersized Culverts	1	1	1	1	1	0	1	0	1	1	1	1	1	0	11	High
2025-CarrolltonT-10	Pandemic Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-CarrolltonT-11	Tunungwant Creek Erosion	1	1	1	1	0	0	1	1	1	1	1	1	0	1	11	High
2025-CarrolltonT-12	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-CarrolltonT-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Community Full Gospel Church, St. John Baptist Church, Town Municipal Building, and Town Barn are located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.										
Description of the Solution:	<p>The Town will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the Town will carry out the option.</p>										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget										
Implementation Timeline:	Within 5 Years										
Goals Met:	1, 3, 5										
Benefits:	Ensures continuity of operations of several critical facilities in the Town.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.										
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.										
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.										
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.										
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facility</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr><tr><td>Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events</td><td>Reduction in response times and delay of critical services in the immediate area.</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.
Action	Evaluation										
No Action	Current problem exists										
Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area										
Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.										

Action 2025-CarrolltonT-02. Landslide Mitigation

Lead Agency:	Highway Department										
Supporting Agencies:	Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Conditions on Parkside Drive make it prone to landslides. Landslides may be able to be mitigated by cutting banks to prevent erosion.										
Description of the Solution:	The Town Engineer will complete an assessment to identify an appropriate, cost-effective method to mitigate landslide risk on Parkside Drive. Possible mitigation measures include: <ul style="list-style-type: none"> • Construction of retaining walls, soil nailing, ground anchor walls • Install horizontal drains to reduce soil saturation • Cut banks along water ways to prevent oversaturated soils from falling • Install netting 										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by landslide near the Allegany River. Keeping the roadway open to traffic also permits vulnerable populations to travel to critical appointments.										
Impact on Future Development:	Future development in the impacted area will be less likely to be impacted by landslides.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Reconstruct roadway outside of hazard area</td> <td>Not feasible</td> </tr> <tr> <td>Close road and reroute traffic around hazard area</td> <td>Not feasible, would cause confusion amongst travelers</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Reconstruct roadway outside of hazard area	Not feasible	Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers		
Action	Evaluation										
No Action	Current problem exists										
Reconstruct roadway outside of hazard area	Not feasible										
Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers										

Action 2025-CarrolltonT-03. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.		
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-CarrolltonT-04. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Town</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-CarrolltonT-05. Temporary Sheltering

Lead Agency:	Town Supervisor		
Supporting Agencies:	Town Board, Cattaraugus County Office of Emergency Services, Neighboring Jurisdictions, American Red Cross		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire	
Description of the Problem:	Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Town needs to identify locations for the placement of temporary sheltering.		
Description of the Solution:	The Town Supervisor will lead efforts to identify a suitable location to temporarily relocate residents or visitors in need of temporary sheltering. The Town will consider options to partner with neighboring jurisdictions for a regional location. The Town will contact the Cattaraugus County Office of Emergency Services for assistance as needed to identify a suitable, approved location.		
Estimated Cost:	Medium		
Potential Funding Sources:	Town Budget, County Budget, Neighboring Jurisdictions, American Red Cross, HSGP		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 2, 4, 6		
Benefits:	Providing a safe, climate-controlled location for individuals in need following an emergency can provide a sense of gratitude and normalcy to an otherwise negative event. Removing individuals from at-risk locations and offering temporary locations for impacted persons to gather, increases the safety of the overall community.		
Impact on Socially Vulnerable Populations:	Socially vulnerable populations are often at the most risk during emergencies and disaster events. Offering a safe location for these populations can ensure their health is looked after and they are removed from harm's way.		
Impact on Future Development:	The temporary sheltering facility will be able to support population increases brought in from potential future development.		
Impact on Critical Facilities/Lifelines:	This action would create, or expand on already existing, critical facilities, as sheltering locations are critical facilities.		
Impact on Capabilities:	This action will create a new capability of the Town by offering a resource for its visitors and residents to utilize should they be in need of temporary sheltering.		
Climate Change Considerations:	The changing climate may lead to the Town, its residents, and visitors being exposed to hazards more frequently. Extreme temperatures have occurred more often in recent years which lead to drought; heavier rainfalls during severe storms have increased the occurrence of flooding. A temporary sheltering facility can provide a safe location for impacted individuals.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Utilize County facilities		May require signed agreements; reliant on County opening facilities
	Utilize American Red Cross facilities		Reliant on American Red Cross opening a facility

Action 2025-CarrolltonT-06. Comprehensive Emergency Management Plan Update

Lead Agency:	Town Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Town will update the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Town will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Town will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Town to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Town performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped										

Action 2025-CarrolltonT-07. Generators at Critical Facilities

Lead Agency:	Engineering										
Supporting Agencies:	Town Board										
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Municipal Complex does not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at the critical facility. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.										
Description of the Solution:	The Town Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Town will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of critical facilities that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>-</td></tr><tr><td>Microgrid</td><td>Costly and difficult to implement.</td></tr><tr><td>Solar panels and battery backup</td><td>Solar power is unlikely to be able to provide battery power for extended power failure events.</td></tr></tbody></table>		Action	Evaluation	No Action	-	Microgrid	Costly and difficult to implement. Microgrid	Costly and difficult to implement.										
Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.										

Action 2025-CarrolltonT-08. Leonard Run Bridge

Lead Agency:	Engineering										
Supporting Agencies:	Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Leonard Run bridge on Main Street is undersized in relation to the culvert recently installed downstream 200' from Leonard Run to Carry State Route 219. Flooding on the bridge and on Main Street can not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible.										
Description of the Solution:	The Town Engineer conducted an assessment of the bridge and culvert to determine what repairs are necessary or may be feasible. The bridge is Scheduled to be replaced via Bridge-NY funding in 2026.										
Estimated Cost:	High										
Potential Funding Sources:	.BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	Infrastructure will be protected from future hazard damages. Ensures at least a single transportation route remains accessible to the community.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations reach needed service provided by the Town.										
Impact on Future Development:	Future development in the impacted area will be able to access critical facilities and community lifelines.										
Impact on Critical Facilities/Lifelines:	Ensures transportation routes remain open and accessible to the public for daily use and evacuation needs. Provides a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridge.										
Impact on Capabilities:	Increases community resiliency to flooding events in vulnerable areas that would normally be vulnerable to prolonged isolation after high-water events.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. This could lead to further degradation of the bridge.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Remove bridge</td> <td>Not feasible, costly</td> </tr> <tr> <td>Build new bridge</td> <td>Not feasible, costly</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Remove bridge	Not feasible, costly	Build new bridge	Not feasible, costly

Build new bridge	Not feasible, costly										

Action 2025-CarrolltonT-09. Undersized Culverts

Lead Agency:	Engineering		
Supporting Agencies:	Highway Department		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Due to recent clear-cut logging operations, it is likely that many of the pipes and culverts are going to be inadequate to carry additional runoff. Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts.		
Description of the Solution:	The Town Engineer will conduct a flood study to determine if logging has resulted in a change in the floodplain function in the town and if upgrades to culverts and the stormwater system are necessary. If necessary, the Town Highway Department will complete the necessary upsizing for the culverts.		
Estimated Cost:	TBD after study is complete		
Potential Funding Sources:	FEMA HMA, CHIPS, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.		
Impact on Capabilities:	Identifying the culverts that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes culvert sizes to meet changing stormwater needs as the result of climate change.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove roadway		Roadway cannot be removed
	Raingardens		Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.

Action 2025-CarrolltonT-10. Pandemic Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-CarrolltonT-11. Tunungwant Creek Erosion

Lead Agency:	Engineering										
Supporting Agencies:	Code Enforcement										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The area surrounding Tunungwant Creek is prone to flooding, impacting nearby roads and properties. Tunungwant Creek may have bank erosion issues, threatening encroachment onto nearby roads. Creek banks may become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding. Additional flood mitigation measures may also be considered.										
Description of the Solution:	The Town Engineer will assess the feasibility and cost-effectiveness of various stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements to prevent future flooding surrounding Tunungwant Creek.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, Town Budget, NYS DEC										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2										
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage to properties.										
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.										
Impact on Future Development:	Future development surrounding Tunungwant Creek will have its risk of flood impacts reduced.										
Impact on Critical Facilities/Lifelines:	Critical facilities and community lifelines near Tunungwant Creek would have a reduced risk to the flood hazard.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. These events can lead to an influx of water, resulting in flooding conditions.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input checked="" type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input checked="" type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Elevate nearby roads</td> <td>Cost prohibitive</td> </tr> <tr> <td>Acquire all properties which flood</td> <td>Cost prohibitive</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Elevate nearby roads	Cost prohibitive	Acquire all properties which flood	Cost prohibitive		
Action	Evaluation										
No Action	Current problem exists										
Elevate nearby roads	Cost prohibitive										
Acquire all properties which flood	Cost prohibitive										

Action 2025-CarrolltonT-12. Bridge Evaluations

Lead Agency:	Highway Department		
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary: <ul style="list-style-type: none"> Carrollton 11 		
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.		
Impact on Socially Vulnerable Populations:	Not applicable		
Impact on Future Development:	Not applicable		
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action	Evaluation	
	No Action	Current problem exists	
	Remove bridges	May cause significant traffic problems	
	Replace bridges	Cost prohibitive	

7. VILLAGE OF CATTARAUGUS

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Village of Cattaraugus with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Cattaraugus, describes who participated in the planning process, assesses Cattaraugus's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

7.1 HAZARD MITIGATION PLANNING TEAM

The Village of Cattaraugus identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Village departments. The Public Works Superintendent represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 7-1 summarizes Village officials who participated in the development of the annex and in what capacity. Additional documentation of the Village's planning activities through Steering Committee meetings is included in Volume I.

Table 7-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact

National Flood Insurance Program Floodplain Administrator	
Name/Title: Kyle Harris, Code Enforcement Officer Address: 14 Main Street, Cattaraugus, NY 14719 Phone Number: Unavailable Email: Unavailable	

7.2 COMMUNITY PROFILE

The Village of Cattaraugus lies in the northwest part of Cattaraugus County in western New York State and has a total area of 1.12 square miles. The village is bordered to the north by Town of Otto and the Town of Persia, to the east is the Town of Ellicottville, to the south is the Town of New Albion, and to the west is the Town of Leon.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 5.1 percent of the population is 5 years of age or younger, 17.4 percent is 65 years of age or older, 3.2 percent is non-English speaking, 18.9 percent is below the poverty threshold, and 19.6 percent is considered disabled.

7.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Cattaraugus performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Cattaraugus to identify opportunities for integrating mitigation concepts into ongoing Village procedures.

7.3.1 Planning and Regulatory Capability and Integration

Table 7-2 summarizes the planning and regulatory tools that are available to Cattaraugus.

Table 7-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 5, 2006:	State and Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? This local law provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code), the State Energy Construction Code (the Energy Code), and the Zoning Law in the Village of Cattaraugus. This local law is adopted pursuant to section 10 of the Municipal Home Rule Law. Except as otherwise provided in the Uniform Code, other state law, or other sections of this local law, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions of this local law				
Zoning/Land Use Code	Yes	Zoning Law 2002	Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? For the purpose of promoting the public health, safety, comfort and general welfare; conserving and protecting property and property values; securing the most appropriate use of land; lessening or avoiding congestion in the public streets and highways; minimizing flood losses in areas subject to periodic inundation; and facilitating adequate but economical provision of public improvements, all in accordance with a comprehensive plan, the Village Board finds it necessary and advisable to regulate the location, size and use of buildings and other structures; percentages of lot area which may be occupied; setback building lines; sizes of yards, courts and other open spaces and the use of land for trade, industry,

Site Plan Code

Yes

Zoning Law 2002, Article 10:
Site Plan Review

Local

Planning Board

How has or will this be integrated with the HMP and how does this reduce risk?

The purpose of this article is to ensure that any new development, substantial redevelopment, or change of use in the Village of Cattaraugus is in harmony with the character of the village. Another purpose is to minimize conflicts between future development and neighboring existing uses and natural features of the site; this will minimize any potential adverse effects to the health, safety, and general welfare of the residents of the Village of Cattaraugus.

Stormwater Management Code

Yes

Zoning Law 2002, Section
9.15 Stormwater Management
and Erosion Control

Local

CEO

How has or will this be integrated with the HMP and how does this reduce risk?

The intent and purpose of this section is to protect, maintain and enhance both the immediate and long-term health, safety and welfare of the residents of the Village of Cattaraugus. In order to achieve these goals, this section has the following objectives: (1) to prevent increases in the magnitude and frequency of stormwater runoff, so as to prevent an increase in flood flows and in the hazards and costs associated with flooding; (2) to maintain the integrity of stream geometry so as to sustain the hydrologic functions of streams; and (3) to control erosion and sedimentation so as to prevent its deposition in streams and other receiving bodies.

Zoning Law 2002, Section
9.21: Stripping of TopsoilState and
LocalCEO and Planning
Board

How has or will this be integrated with the HMP and how does this reduce risk?

Where permitted in Article 7 of this law by special use permit, all stripping of topsoil for sale or use off site shall conform to the following requirements. Excavation or grading that is incidental to the construction or alteration of a building, structure or parking area for which a permit has been obtained is exempt from these regulations.

(A) Applicant shall submit to the Planning Board a plan of operation. The Planning Board may make modifications to this plan, including hours of operation.

(B) No topsoil stripping activity shall be operated in such a way as to cause excessive dust, noise, traffic or other conditions inappropriate for the neighborhood in which it is located, or so as to endanger the stability of adjacent land or structures.

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------------	--	---	---

(C) The Planning Board may require a site restoration plan to be presented prior to the grant of special use permit. The Board may also require that a bond be posted with the Village in an amount adequate to complete the restoration plan.

(D) A stormwater management and erosion control plan shall be required.

Flood Damage Prevention Ordinance	Yes	Zoning Law 2002, Section 9.7 Areas of Special Flood Hazard (SFHA)	State and Local	CEO
--	-----	---	--------------------	-----

How has or will this be integrated with the HMP and how does this reduce risk?

The purposes of this section are:

- (1) to protect human life and health;
- (2) to minimize expenditure of public money for costly flood control projects;
- (3) to minimize the need for rescue and relief efforts associated with flooding and generally undertaken at the expense of the general public;
- (4) to minimize prolonged business interruption;
- (5) to minimize damage to public facilities and utilities such as water and gas mains, electric, telephone, sewer lines, and streets and bridges that are located in areas of special flood hazard; and
- (6) To help maintain a stable tax base by providing for the sound use and development of areas of special flood hazard so as to minimize future flood blight areas.

Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

7.3.4 Fiscal Capability

Table 7-5 summarizes financial resources available to Cattaraugus.

Table 7-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	Yes
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	No
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	No
Stormwater utility fee	No

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	Yes
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	No
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

7.3.5 Education and Outreach Capability

Table 7-6 summarizes the education and outreach resources available to Cattaraugus.

Table 7-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	No	-
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	Yes	Siren
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

7.3.6 Community Classifications

Table 7-7 summarizes classifications for community programs available to Cattaraugus.

Table 7-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-

N/A = Not applicable

— = Unavailable

7.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 7-8 summarizes the adaptive capacity for each identified hazard of concern and the Village’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 7-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Interruption	Moderate
Wildfire	Moderate

7.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 7-1 is responsible for maintaining this information.

7.4.1 NFIP Statistics

Table 7-9 summarizes the NFIP policy and claim statistics for Cattaraugus.

Table 7-9. Cattaraugus NFIP Summary of Policy and Claim Statistics

# Policies	0
# Claims (Losses)	21
Total Loss Payments	\$31,836.50

# Repetitive Loss Properties (NFIP definition)	1
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

7.4.2 Flood Vulnerability Summary

Table 7-10 provides a summary of the NFIP program in Cattaraugus.

Table 7-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Creek Areas
Do you maintain a list of properties that have been damaged by flooding?	Yes
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	None
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Inspections
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	None
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No

NFIP Topic	Comments
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Inspections
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: April 16, 2018 CAV: Not applicable
What is the local law number or municipal code of your flood damage prevention ordinance?	Zoning Law 2002, Section 9.7 Areas of Special Flood Hazard (SFHA)
What is the date that your flood damage prevention ordinance was last amended?	June 25, 2006
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Yes, Flood risk is considered
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

7.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 7-11 through Table 7-13.

Table 7-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 7-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
The Village did not indicate any recent major development or infrastructure occurred between 2019 to present.					

* Only location-specific hazard zones or vulnerabilities identified.

Table 7-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
The Village did not indicate any known or anticipated major development or infrastructure in the next five years.					

7.6 JURISDICTIONAL RISK ASSESSMENT

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Cattaraugus's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

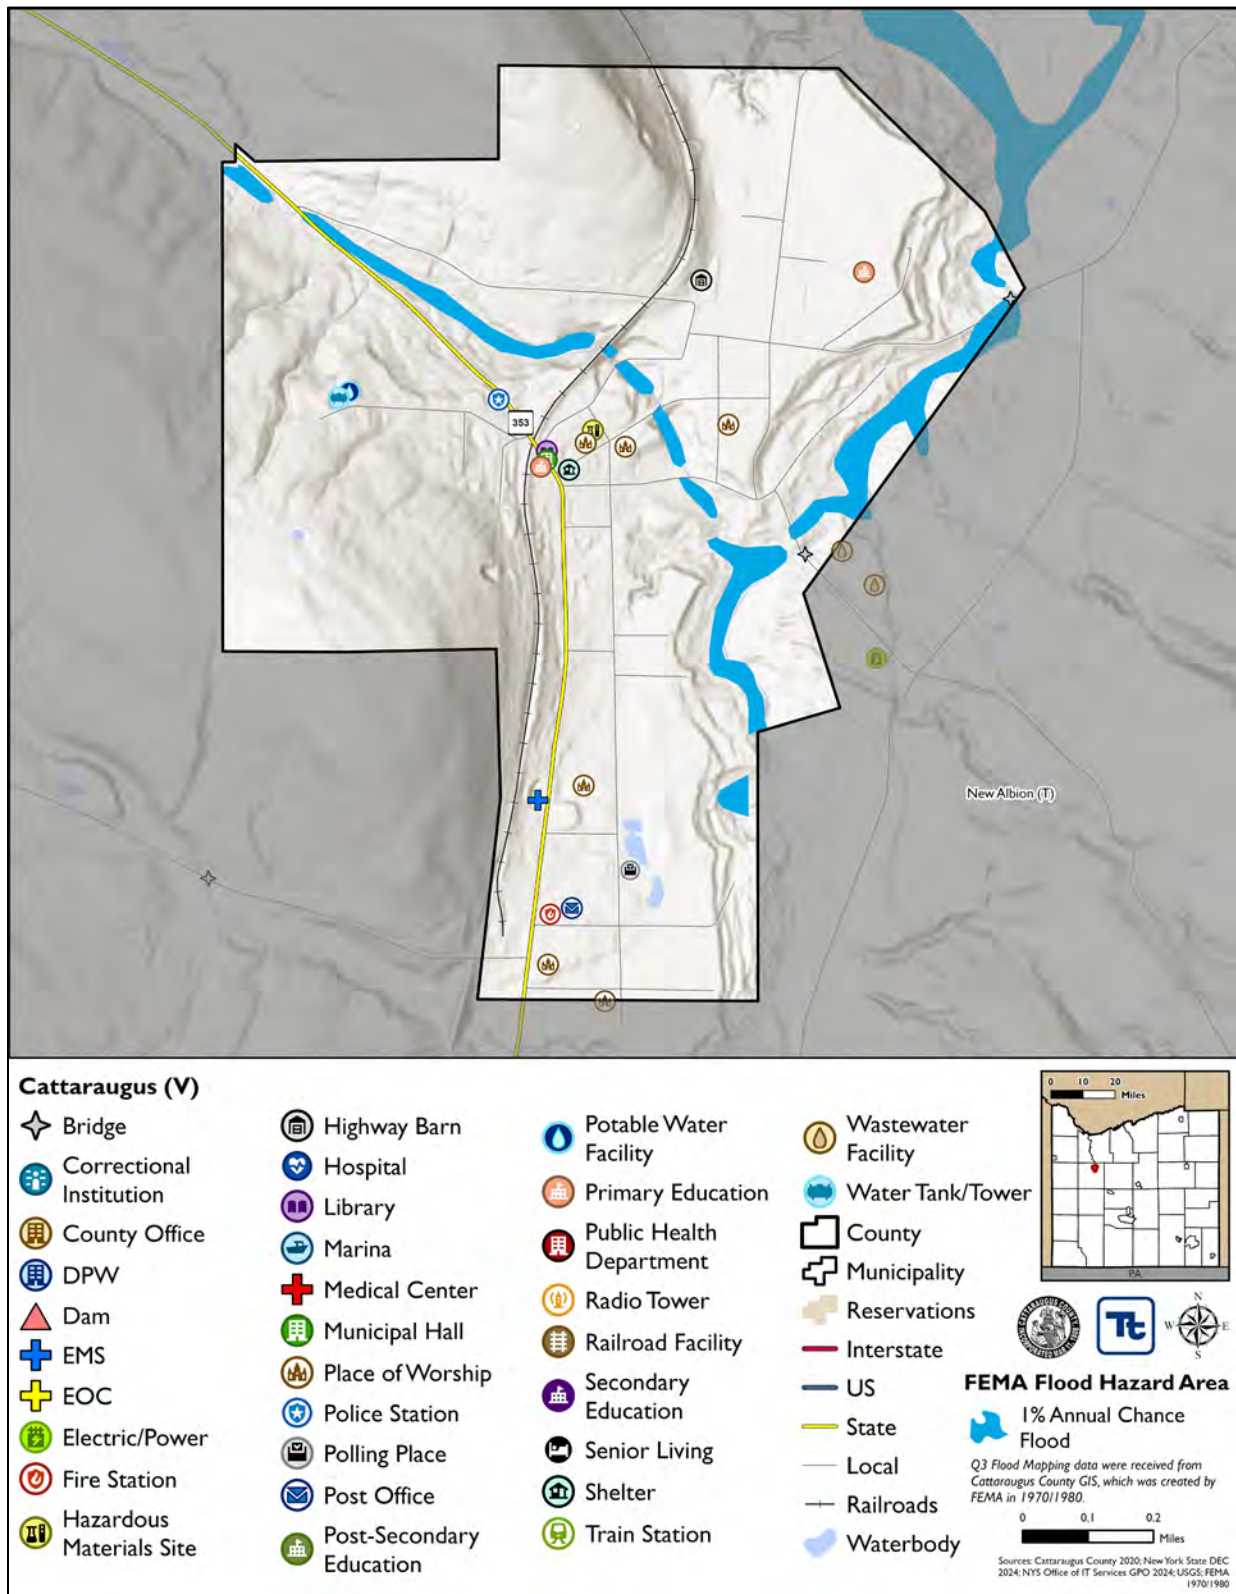

7.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Village are shown in Figure 7-1 through Figure 7-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Cattaraugus has significant exposure. The maps show the location of potential new development, where available.

DRAFT

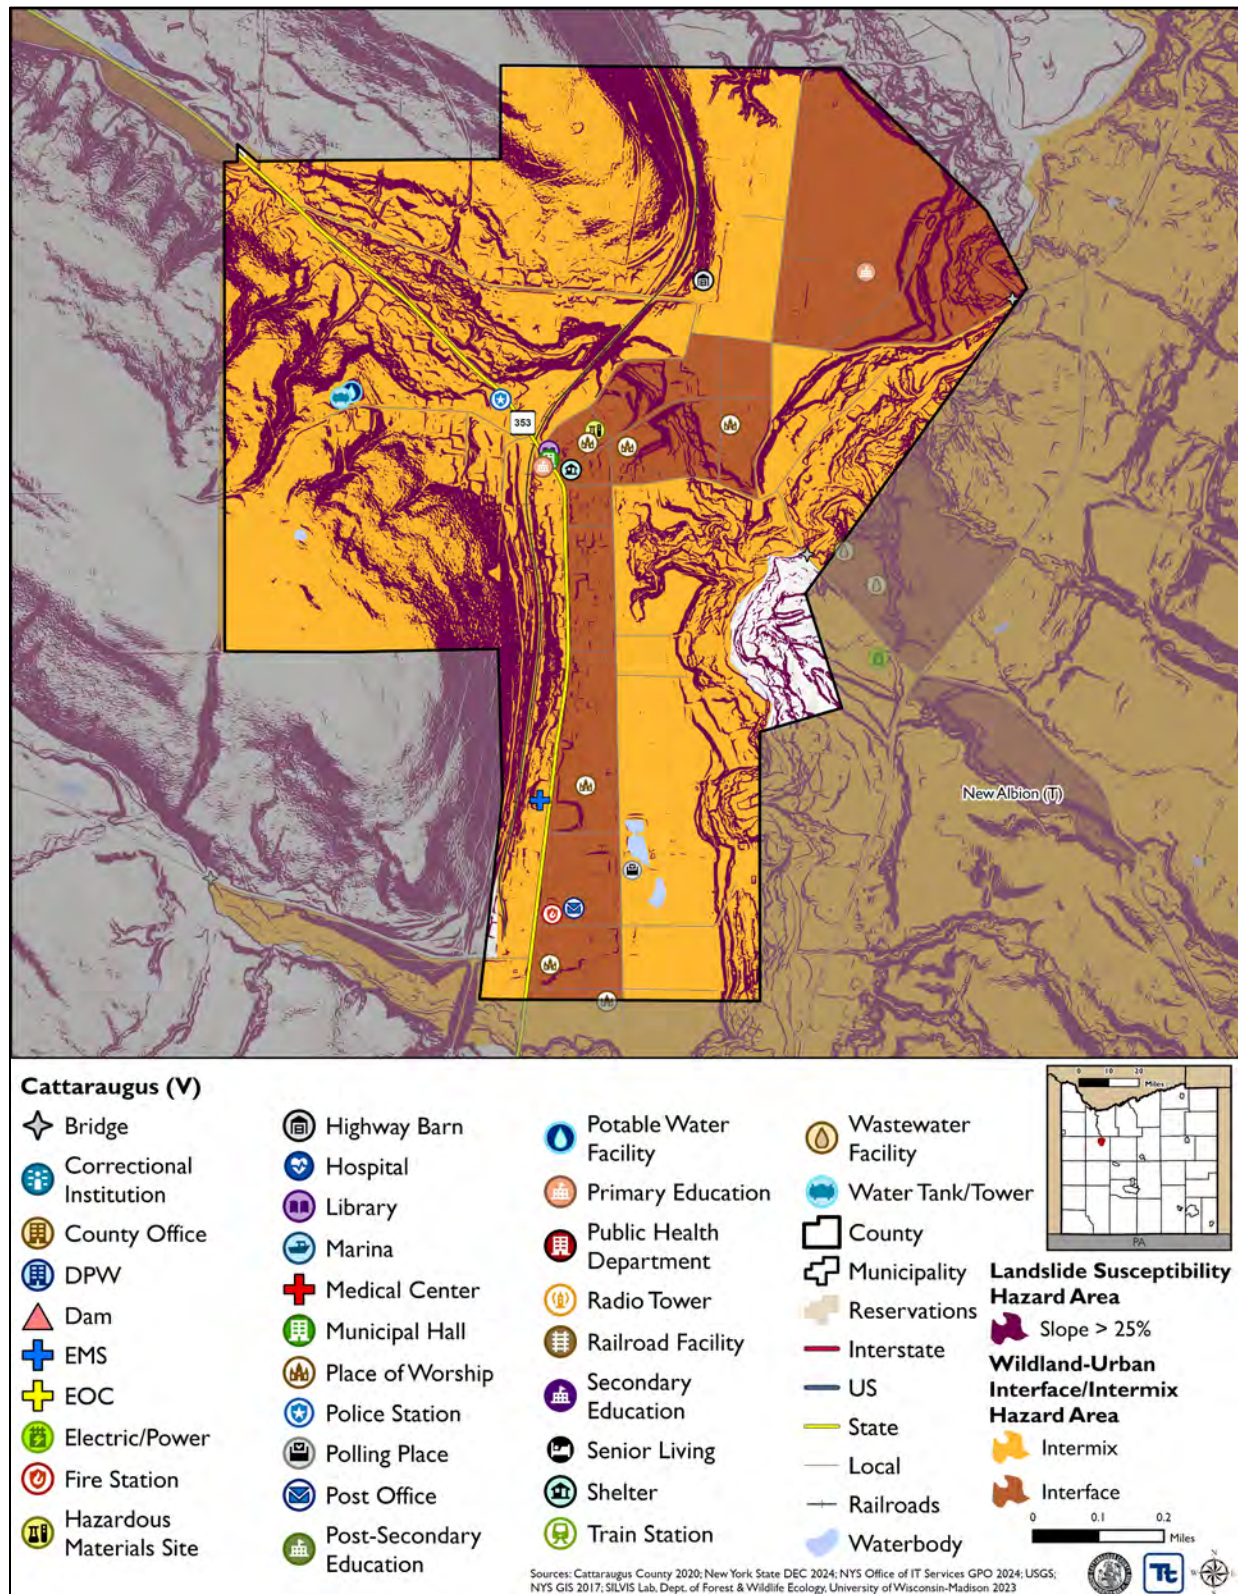

Figure 7-1. Cattaraugus Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 7-2. Cattaraugus Landslide and Wildfire Hazard Area Extent and Location Map

7.6.2 Hazard Event History

The history of natural and non-natural hazard events in Cattaraugus is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 7-14 provides details on loss and damage in Cattaraugus during hazard events since the last hazard mitigation plan update.

Table 7-14. Hazard Event History in Cattaraugus

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Cattaraugus
October 31- November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Village did not incur any documented damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Village did not incur any documented damage or losses.
January 12, 2020	High Wind	N/A	High wind	The Village did not incur any documented damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Village did not incur any documented damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Village did not incur any documented damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Village did not incur any documented damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Village did not incur any documented damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Village did not incur any documented damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Village did not incur any documented damage or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Village did not incur any documented damage or losses.
March 6, 2022	High Wind	N/A	High wind	The Village did not incur any documented damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Village did not incur any documented damage or losses.

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Cattaraugus
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Village did not incur any documented damage or losses.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

7.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Cattaraugus .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Cattaraugus reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Village noted the following:

- The Village decreased the Dam and Levee Failure hazard from 'Low' to 'No Risk' due to no nearby dams which pose significant risk to the jurisdiction.

Table 7-15 shows Cattaraugus's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 7-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	No Risk
Flood	Medium
Landslide	Medium
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 7-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 7-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
New Albion 29	Bridge	X	-	2025-CattaraugusV-12	-

Source: Cattaraugus County 2024

7.6.4 Identified Issues

After a review of Cattaraugus's hazard event history, hazard rankings, hazard location, and current capabilities, Cattaraugus identified the following vulnerabilities within the community:

- Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Village has one repetitive loss property, but other properties may be impacted by flooding as well.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The Village does not have an inventory of roads which may be impacted by landslides.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- The Village faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.
- The unnamed stream which traverses through the Village is experiencing stream bank erosion issues, threatening encroachment onto nearby roads. Stream banks become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding and potential landslide issues.
- The Village has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- Critical facilities require backup power to ensure continuity of operations. The Village Hall and several sewer pumps do not have back up power, which could impact the continuity of operations at the facilities in the

event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems

- Undersized drainage often results in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the drainage system. Existing pipes within the Village's west side are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters.
- The Village faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - New Albion 29

7.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

7.7.1 Past Mitigation Action Status

Table 7-17 indicates progress on the Village's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

7.7.2 Additional Mitigation Efforts

Cattaraugus did not identify any additional mitigation efforts completed since the last HMP.

Table 7-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Village of Cattaraugus-001	Study landslide conditions	Landslide	Village of Cattaraugus Department Public Works and County Emergency Management	<p>Problem: The village lacks information to determine local vulnerabilities to landslides threatening property and roads.</p> <p>Solution: Work with county to conduct surveys to determine local vulnerabilities to landslides threatening property and roads, coordinate with municipalities to limit development in these areas and develop remedial measures for existing vulnerabilities.</p>	1. No Progress 2. Village prioritized other projects.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-002	Implement, encourage training for Code Enforcement Officers.	Flood	County DPW	<p>Problem: Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.</p> <p>Solution: Obtain/host specialist training and certification for floodplain managers.</p>	1. No Progress 2. Lack of training availability.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-003	Update the Flood Damage Prevention Ordinance to	Flood	Village Board, FPA	Problem: The Flood Damage Prevention Ordinance does not include the 2' freeboard requirement mandated by NYS.	1. No Progress 2. Village prioritized other projects.	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
	include freeboard			Solution: The Flood Damage Prevention Ordinance will be updated to include the 2' freeboard requirement mandated by NYS.		
2020-Village of Cattaraugus-004	Wildfire Outreach	Wildfire	County Planning	<p>Problem: Public needs to be educated on what they can do to protect their structures from wildfires.</p> <p>Solution: Provide information to residents, business owners, and organizations about what they can do to protect their structures from wildfires. This will be done via pamphlets and website resources and include such information as: the dissemination of American Red Cross evacuation centers, supplies to have on hand, listing of emergency telephone numbers.</p>	1. No Progress 2. Village prioritized other projects.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-005	Landfill stream erosion	Flood	Village Department of Public Works	<p>Problem: Stream is cutting into landfill and causing erosion.</p> <p>Solution: Conduct a feasibility assessment to determine measures to reduce erosion at landfill and implement cost-effective actions.</p>	1. No Progress 2. Financial constraints.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-006	Identify locations for temporary housing	All Hazards	Village Department of Public Works, County EMO, Village Board	<p>Problem: The Village has not identified locations for temporary housing in the event of a disaster.</p> <p>Solution: Village staff will work with County EMO to identify and assess</p>	1. Complete 2. Public Works facility is utilized for temporary sheltering.	1. Discontinue 2. Not applicable 3. Public Works facility is utilized for temporary sheltering.

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				viability of temporary housing locations to be used in the event of a disaster.		
2020-Village of Cattaraugus-007	Update Municipal Emergency Operation Plan	All Hazards	Village Board, County EMO	Problem: The local Emergency Response Plan requires an update. Solution: The village will update the municipal Emergency Plan.	1. No Progress 2. Village prioritized other projects.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-008	Tree Trimming Program	Flood	Village Department of Public Works	Problem: The village does not have a tree trimming program in place. Tree limbs can cause damage throughout the village. Solution: The village will develop a tree trimming maintenance program. The program will include conducting tree inventories to determine which ones pose a threat in the event of a storm. Once identified, the village will trim or remove trees that pose a threat.	1. No Progress 2. Village prioritized other projects.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-009	Backup generator for Village Hall	All	Village Department Public Works	Problem: Village Hall lacks backup power to keep this critical facility open during an emergency or when power fails. Solution: Install generator at Village Hall, minimum 50 kw.	1. No Progress 2. Financial constraints.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-010	Backup generator for Jefferson Street sewer pumps	All	Village Department Public Works	Problem: The sewer pumps lack backup power to keep this critical facility open during an emergency or when power fails.	1. No Progress 2. Financial constraints.	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				Solution: Install generator at Jefferson Street, minimum 75 kw.		
2020-Village of Cattaraugus-011	Backup generator for Waverly Street sewer pumps	All	Village Department Public Works	Problem: The Waverly Street sewer pumps lack backup power to keep this critical facility open during an emergency or when power fails. Solution: Install generator at Waverly Street pumps, minimum 75 kw.	1. No Progress 2. Financial constraints.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-012	Improve drainage on west side of village	Flood	Village Department Public Works	Problem: Existing pipes within the village's west side are too small and run under an old building. Solution: Complete engineering study and install 48" new water pipe along railroad tracks to outfall to creek.	1. No Progress 2. Financial constraints.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Cattaraugus-013	Identify locations for temporary housing	All hazards	Village Board and staff	Problem: The village has not yet identified locations to site temporary housing in the event of a disaster. Solution: Work with property owners to identify potential temporary housing locations.	1. No Progress 2. Financial constraints.	1. Discontinue 2. Not applicable 3. Duplicate action of 2020-Village of Cattaraugus-006

7.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Cattaraugus participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 "Selecting Appropriate Mitigation Measures for Floodprone Structures" (March 2007)
- FEMA "Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards" (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Cattaraugus would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Village priorities.

Table 7-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 7-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 7-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure										
Flood	X	X		X	X		X		X	X
Landslide	X				X					X
Pandemic	X			X			X			X
Severe Storm	X	X			X				X	X
Severe Winter Storm	X	X			X				X	X
Utility Failure	X	X								X
Wildfire	X			X			X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 7-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-CattaraugusV-01	Repetitive Loss Properties	1	1	1	1	1	0	1	1	1	0	1	1	0	1	11	High
2025-CattaraugusV-02	Landslide Prone Roads Inventory	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-CattaraugusV-03	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-CattaraugusV-04	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-CattaraugusV-05	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-CattaraugusV-06	Streambank Erosion	1	1	1	1	0	0	1	1	1	1	1	1	0	1	11	High
2025-CattaraugusV-07	Comprehensive Emergency Management Plan Update	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-CattaraugusV-08	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-CattaraugusV-09	Undersized Drainage	1	1	1	1	1	0	1	0	1	1	1	1	1	0	11	High
2025-CattaraugusV-10	Pandemic Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-CattaraugusV-11	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-CattaraugusV-01. Repetitive Loss Properties

Lead Agency:	Code Enforcement										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Village has one repetitive loss property, but other properties may be impacted by flooding as well.										
Description of the Solution:	The Village will conduct outreach to the impacted properties and will provide information on mitigation alternatives. After preferred mitigation measures are identified, the Village will collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/purchase/moving/elevating of the affected properties that experience frequent flooding. The parameters for this initiative would be funding, benefits versus cost, and willing participation of property owners.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA FMA, FMA SWIFT, Village Budget, County Budget, Property Owners										
Implementation Timeline:	3 years										
Goals Met:	1										
Benefits:	This action would foster comprehensive floodplain management by removing at risk properties from the flood hazard area or elevating properties to reduce the flood risk.										
Impact on Socially Vulnerable Populations:	Collecting data regarding homeowners that reside within flood prone areas provides an opportunity to introduce location-specific opportunities for assistance. Socially vulnerable populations may be able to have houses elevated or acquired when it would otherwise be unaffordable.										
Impact on Future Development:	Increased outreach to homeowners within a flood prone area will limit construction in areas that are prone to hazard events. Homes may be acquired, which will remove those structures from the floodplain and prevent future development on those sites.										
Impact on Critical Facilities/Lifelines:	Removing structures from the floodplain decreases the demand on utilities and emergency services including health and medical, law enforcement, and search and rescue.										
Impact on Capabilities:	Outreach which promotes the removal of risk from the immediate floodplain via acquisition of properties will free up resources for search and rescue and other emergency operations as needed. This action will enhance the Village's current NFIP capabilities.										
Climate Change Considerations:	Climate change is likely to increase the frequency and severity of severe rainfall, flash flooding, riverine flooding, and coastal flooding from sea level rise and storm surge events. Removing structures from the floodplain will reduce the response and recovery costs as a result of these events and decrease the loss of human life as a result of these events. Elevating structures will reduce the recovery costs.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Levee around floodplain</td> <td>Costly, not enough room.</td> </tr> <tr> <td>Deployable flood barriers</td> <td>Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Levee around floodplain	Costly, not enough room.	Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.
Action	Evaluation										
No Action	Current problem exists										
Levee around floodplain	Costly, not enough room.										
Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.										

Action 2025-CattaraugusV-02. Landslide Prone Roads Inventory

Lead Agency:	Engineering		
Supporting Agencies:	Public Works Department		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The Village does not have an inventory of roads which may be impacted by landslides.		
Description of the Solution:	The Village Engineer will complete an assessment to identify roads in Village which have slopes at grades greater than 20 percent. Once identified, The Engineer will work with the Public Works Department to prioritize roadways and identify possible mitigation measures.		
Estimated Cost:	Low		
Potential Funding Sources:	Village Budget		
Implementation Timeline:	3 years		
Goals Met:	1, 4, 6		
Benefits:	This action will identify locations with steep grades (above 20 percent) and provide Public Works and Engineer with future locations to implement mitigation measures to protect any nearby property and infrastructure.		
Impact on Socially Vulnerable Populations:	This action may identify socially vulnerable populations whose properties may be at risk to the landslide hazard. If identified, the Village may educate the populations on how to mitigate potential risks.		
Impact on Future Development:	The identification of at-risk roads may lead to restrictions for future development.		
Impact on Critical Facilities/Lifelines:	This action has the potential to identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action may improve the Village's regulatory capabilities.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Village will be unaware of any safety concerns for the dam or its condition
	Do not use inventory to inform steep slopes ordinance		Would not restrict future development, could increase at risk properties and structures
	Do not use inventory to inform future projects		Risk would not be reduced

Action 2025-CattaraugusV-03. Floodplain Management Training

Lead Agency:	Code Enforcement										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.										
Description of the Solution:	Where feasible, the Village will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 3, 4										
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.										
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.										
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.										
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.										
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.										
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Hire outside contractors for floodplain administration</td> <td>Costly</td> </tr> <tr> <td>Establish shared service agreements for floodplain administration from neighboring municipalities</td> <td>Neighboring municipalities are unlikely to have the staff capacity to take on this role</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Hire outside contractors for floodplain administration	Costly	Establish shared service agreements for floodplain administration from neighboring municipalities	Neighboring municipalities are unlikely to have the staff capacity to take on this role		
Action	Evaluation										
No Action	Current problem exists										
Hire outside contractors for floodplain administration	Costly										
Establish shared service agreements for floodplain administration from neighboring municipalities	Neighboring municipalities are unlikely to have the staff capacity to take on this role										

Action 2025-CattaraugusV-04. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.										
Description of the Solution:	The Village will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Village will update and adopt the Flood Damage Prevention Ordinance.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.										
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.										
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.										
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.										
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Update only freeboard requirements</td> <td>Other areas of the ordinance which need to be updated would not be</td> </tr> <tr> <td>Leave NFIP</td> <td>Residents lose flood insurance coverage</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Update only freeboard requirements	Other areas of the ordinance which need to be updated would not be	Leave NFIP	Residents lose flood insurance coverage
Action	Evaluation										
No Action	Current problem exists										
Update only freeboard requirements	Other areas of the ordinance which need to be updated would not be										
Leave NFIP	Residents lose flood insurance coverage										

Action 2025-CattaraugusV-05. Wildfire Education and Outreach

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire										
Description of the Problem:	The Village faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Village events, the Village newsletters, social media, the Village website, and having the materials on display for the public at Village libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Village by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Village.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Village.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Village's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Village</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-CattaraugusV-06. Streambank Erosion

Lead Agency:	Engineering										
Supporting Agencies:	Public Works										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The unnamed stream which traverses through the Village is experiencing stream bank erosion issues, threatening encroachment onto nearby roads. Stream banks become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding and potential landslide issues.										
Description of the Solution:	The Village Engineer will assess the feasibility and cost-effectiveness of various stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements to prevent future flooding surrounding the unnamed stream.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, Village Budget, NYS DEC										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2										
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage to properties.										
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.										
Impact on Future Development:	Future development surrounding the unnamed stream will have its risk of flood impacts reduced.										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. These events can lead to an influx of water, resulting in flooding conditions.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Elevate nearby roads</td><td>Cost prohibitive</td></tr><tr><td>Acquire all properties which flood</td><td>Cost prohibitive</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Elevate nearby roads	Cost prohibitive	Acquire all properties which flood	Cost prohibitive
Action	Evaluation										
No Action	Current problem exists										
Elevate nearby roads	Cost prohibitive										
Acquire all properties which flood	Cost prohibitive										

Action 2025-CattaraugusV-07. Comprehensive Emergency Management Plan Update

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Village has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Village will update the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Village will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Village will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Village to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Village performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for the Village.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Village CEMP will remain undeveloped</td> </tr> </tbody> </table>		Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Village CEMP will remain undeveloped	
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Village CEMP will remain undeveloped										

Action 2025-CattaraugusV-08. Generators at Critical Facilities

Lead Agency:	Engineering										
Supporting Agencies:	Village Board, Public Works										
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Village Hall and several sewer pumps do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems										
Description of the Solution:	The Village Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Village will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Village Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of critical facilities that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>-</td> </tr> <tr> <td>Microgrid</td> <td>Costly and difficult to implement.</td> </tr> <tr> <td>Solar panels and battery backup</td> <td>Solar power is unlikely to be able to provide battery power for extended power failure events.</td> </tr> </tbody> </table>	Action	Evaluation	No Action	-	Microgrid	Costly and difficult to implement.	Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.		
Action	Evaluation										
No Action	-										
Microgrid	Costly and difficult to implement.										
Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.										

Action 2025-CattaraugusV-09. Undersized Drainage

Lead Agency:	Public Works		
Supporting Agencies:	Code Enforcement, Engineer		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Undersized drainage often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the drainage system. Existing pipes within the Village's west side are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters.		
Description of the Solution:	The Village Engineer will complete an engineering survey of the culverts in Village that are undersized and contribute to flooding to determine the proper size necessary to provide stormwater capacity. The Village Public Works will complete the necessary upsizing for the culverts.		
Estimated Cost:	TBD after study is complete		
Potential Funding Sources:	FEMA HMA, CHIPS, Village Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.		
Impact on Capabilities:	Identifying drainage systems that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes drainage systems to meet changing stormwater needs as the result of climate change.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove roadway		Roadway cannot be removed
	Raingardens		Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.

Action 2025-CattaraugusV-10. Pandemic Education and Outreach

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Village faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Village events, the Village newsletters, social media, the Village website, and having the materials on display for the public at Village libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Village by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Village.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Village.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Village's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Village</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-CattaraugusV-11. Bridge Evaluations

Lead Agency:	Public Works Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none"> New Albion 29 										
Description of the Solution:	Public Works will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Remove bridges</td> <td>May cause significant traffic problems</td> </tr> <tr> <td>Replace bridges</td> <td>Cost prohibitive</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Remove bridges	May cause significant traffic problems	Replace bridges	Cost prohibitive		
Action	Evaluation										
No Action	Current problem exists										
Remove bridges	May cause significant traffic problems										
Replace bridges	Cost prohibitive										

8. TOWN OF COLDSRING

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Coldspring with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Coldspring, describes who participated in the planning process, assesses Coldspring's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

8.1 HAZARD MITIGATION PLANNING TEAM

The Town of Coldspring identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Highway Superintendent represented the community on the Cattaraugus County HMP Steering Committee supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 8-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 8-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Kirk Hayes, Highway Superintendent Address: 2604 Lebanon Road, Steamburg, NY 14783 Phone Number: (716) 499-0342 Email: coldspringhwy@windstream.net	Name/Title: Tina Hyde, Supervisor Address: 2604 Lebanon Road, Steamburg, NY 14783 Phone Number: (716) 969-3567 Email: townofcoldspringssupervisor@outlook.com
National Flood Insurance Program Floodplain Administrator	
Name/Title: Randall Brooks, Code Enforcement Officer Address: 2604 Lebanon Road, Steamburg, NY 14783 Phone Number: (716) 665-8924 Email: rjbrooks02@hotmail.com	

8.2 COMMUNITY PROFILE

The Town of Coldspring lies in the southwestern part of Cattaraugus County in western New York State and has a total area of 52 square miles. The Allegheny River partially forms the southern town border. The town is bordered to the north by the Town of Napoli, to the east is the Towns of Salamanca and Red House, to the south is the State of Pennsylvania, and to the west is the Towns of South Valley and Randolph. The Town of Coldspring was formed in 1837 from part of the Town of Napoli.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 2.6 percent of the

population is 5 years of age or younger, 15.5 percent is 65 years of age or older, 0 percent is non-English speaking, 12.9 percent is below the poverty threshold, and 19.8 percent is considered disabled.

8.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Coldspring performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Coldspring to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

8.3.1 Planning and Regulatory Capability and Integration

Table 8-2 summarizes the planning and regulatory tools that are available to Coldspring.

Table 8-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 1, 2011: Enforcement of the NYS Uniform Fire Prevention and Building Code	State and Local	Code Enforcement, Town Board
How has or will this be integrated with the HMP and how does this reduce risk? Code applies to construction, alteration, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.				
Zoning/Land Use Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Subdivision Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Site Plan Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to “caveat emptor,” a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.				
Growth Management	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Environmental Protection Ordinance(s)	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Flood Damage Prevention Ordinance	Yes	Local Law 2, 1992:Flood Damage Prevention	Federal, State, County and Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? Promotes public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas.				
Wellhead Protection	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Emergency Management Ordinance	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Climate Change Ordinance	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?

8.3.2 Development and Permitting Capability

Table 8-3 summarizes the capabilities of Coldspring to oversee and track development.

Table 8-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?		
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	Yes	Code Enforcement
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	
Do you have a buildable land inventory?		
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 	No	-
Describe the level of buildout in your jurisdiction.	N/A	10-15% remains available

8.3.3 Administrative and Technical Capability

Table 8-4 summarizes potential staff and personnel resources available to Coldspring and their current responsibilities that contribute to hazard mitigation.

Table 8-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	No	-
Zoning Board of Adjustment	No	-
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	Highway Superintendent
Construction/Building/Code Enforcement Department	Yes	Code Enforcement Officer
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	Yes	Fire Department

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	Yes	Code Enforcement
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

8.3.4 Fiscal Capability

Table 8-5 summarizes financial resources available to Coldspring.

Table 8-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	Yes
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Stormwater utility fee	No
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	Yes
Incur debt through private activity bonds	Yes
Withhold public expenditures in hazard-prone areas	Yes
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	Yes
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	Yes

8.3.5 Education and Outreach Capability

Table 8-6 summarizes the education and outreach resources available to Coldspring.

Table 8-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Supervisor
Personnel skilled or trained in website development	Yes	Southern Tier West
Hazard mitigation information available on your website	Yes	
Social media for hazard mitigation education and outreach	Yes	
Citizen boards or commissions that address issues related to hazard mitigation	Yes	Town Board
Warning systems for hazard events	Yes	Fire Department
Natural disaster/safety programs in place for schools	Yes	Fire and Severe Storm programs
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

8.3.6 Community Classifications

Table 8-7 summarizes classifications for community programs available to Coldspring.

Table 8-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	Yes	5	2017
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-

Program	Participating? (Yes/No)	Classification	Date Classified
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

8.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 8-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 8-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Moderate

8.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 8-1 is responsible for maintaining this information.

8.4.1 NFIP Statistics

Table 8-9 summarizes the NFIP policy and claim statistics for Coldspring.

Table 8-9. Coldspring NFIP Summary of Policy and Claim Statistics

# Policies	1
# Claims (Losses)	5
Total Loss Payments	\$40,275.76

# Policies	1
# Repetitive Loss Properties (NFIP definition)	1
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

8.4.2 Flood Vulnerability Summary

Table 8-10 provides a summary of the NFIP program in Coldspring.

Table 8-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	County Road 9 near Intersection of NYS 394 – constant flooding of stream (DEC permit issues for stream and beaver dams) noted on HMP 2020.
Do you maintain a list of properties that have been damaged by flooding?	Property owners nearby not interested in acquisition; County made an offer, and they declined.
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Other property owners near the flooding on County Road 9 are not interested but would like the creek dredged and beaver dams removed so that creek flows like it used to without backing up. Now basements are flooding across the road on Flood Road.
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Procedures are not developed.
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	None
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	No, they need to be updated.

NFIP Topic	Comments
NFIP Compliance	
What local department is responsible for floodplain management?	Office of Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	Yes
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, the County has a GIS department capable of analyzing future flooding conditions.
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	Additional training on floodplain management in general is needed.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit review and inspections are performed
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	If the development is at least 50% of the total original value
What are the barriers to running an effective NFIP program in the community, if any?	Funding issues
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: April 10, 2012 CAV: Not applicable
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 2, 1992: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	1992
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Code Enforcement does site plan reviews
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

8.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 8-11 through Table 8-13.

Table 8-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	4	0	0	4
Permits within SFHA	0	0	0	0
2020				
Total Permits	2	0	0	2
Permits within SFHA	0	0	0	0
2021				
Total Permits	5	0	0	5
Permits within SFHA	0	0	0	0
2022				
Total Permits	3	0	0	3
Permits within SFHA	0	0	0	0
2023				
Total Permits	1	0	0	1
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 8-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
There has been no recent major development or infrastructure between 2019 to present.					

* Only location-specific hazard zones or vulnerabilities identified.

Table 8-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
There are no known or anticipated major development or infrastructure in the next five years.					

8.6 JURISDICTIONAL RISK ASSESSMENT

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Coldspring's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

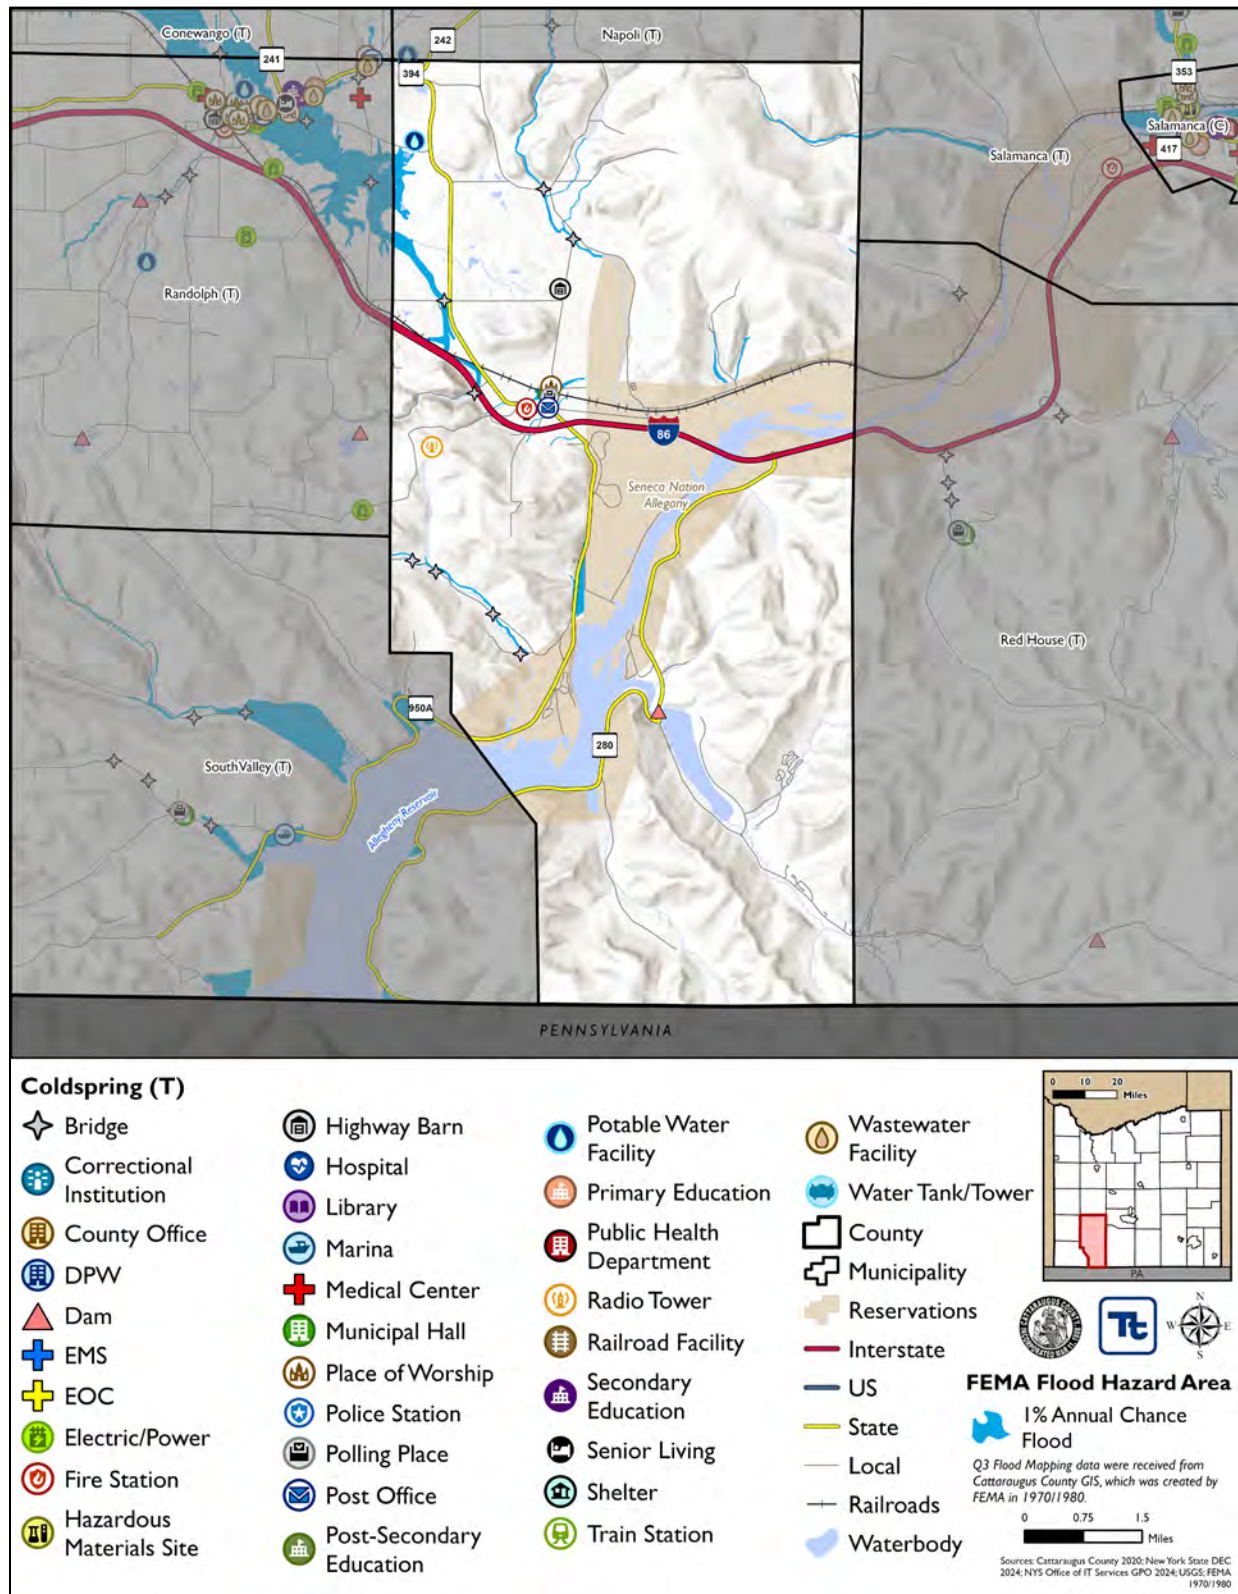

8.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 8-1 through Figure 8-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Coldspring has significant exposure. The maps show the location of potential new development, where available.

DRAFT

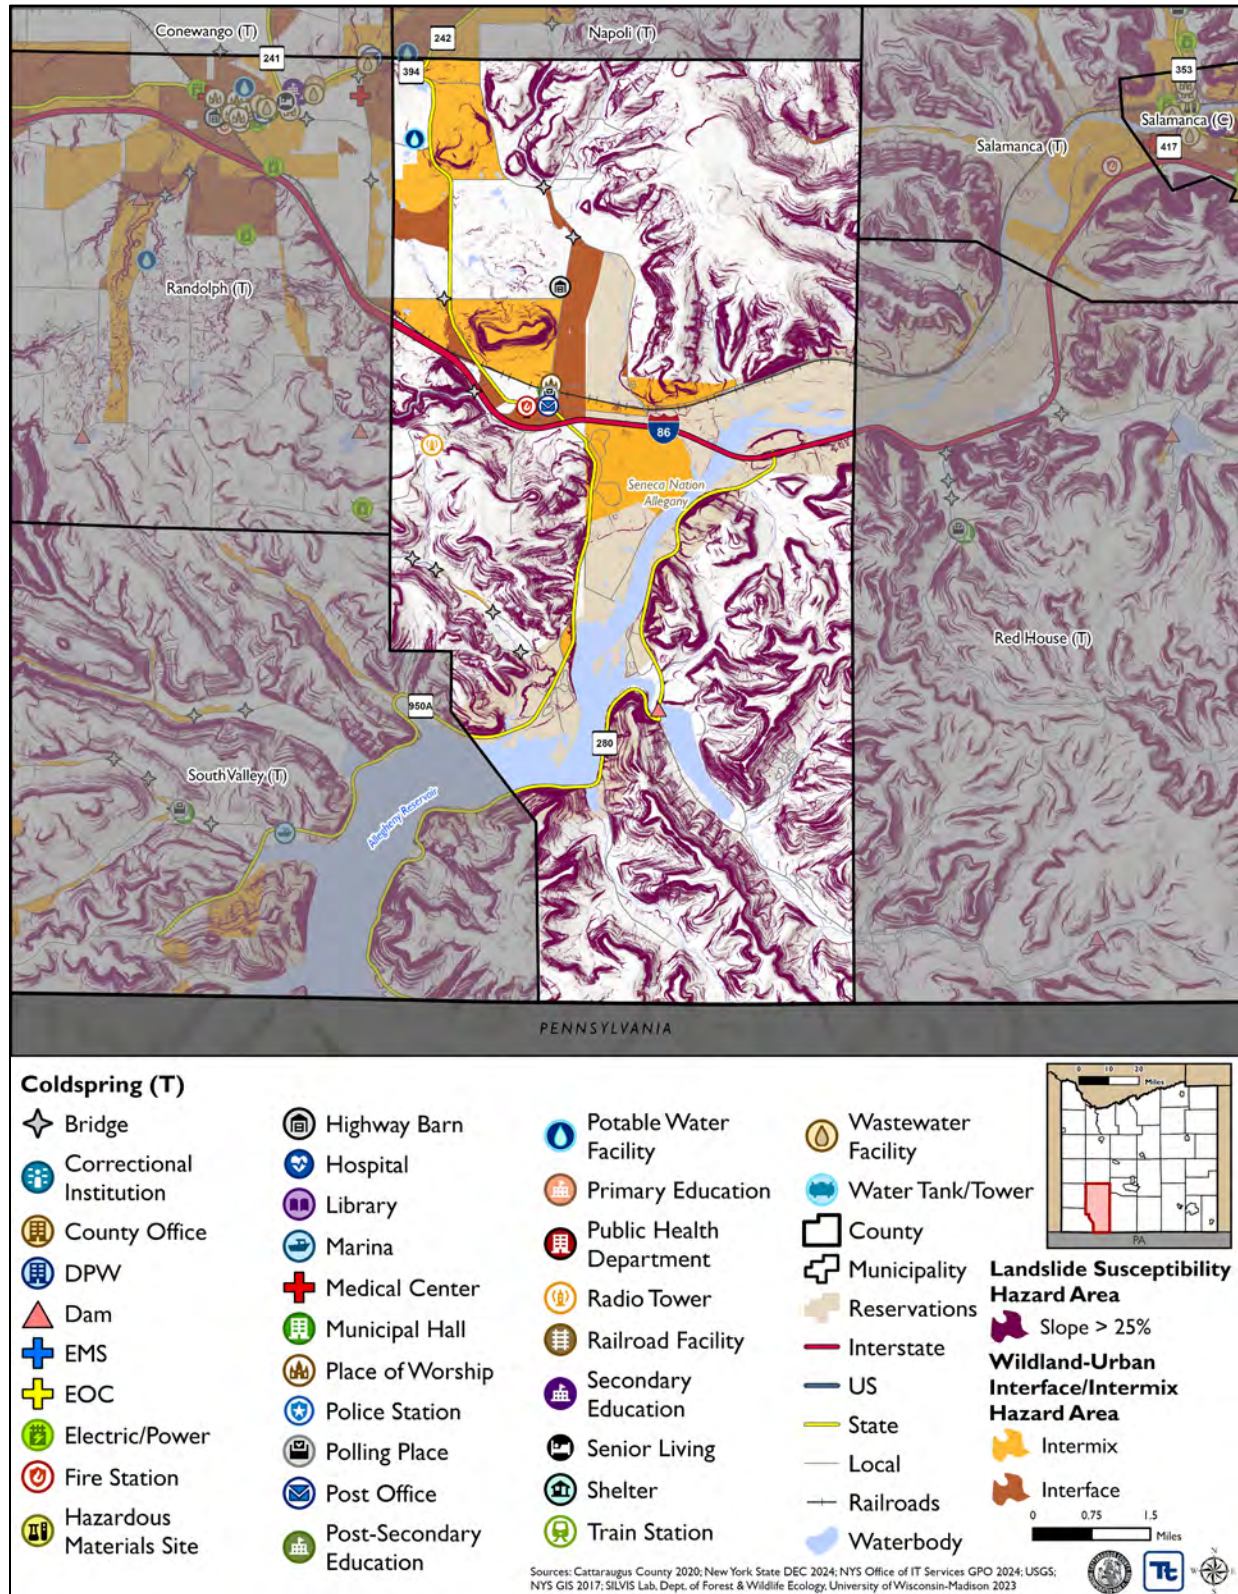

Figure 8-1. Coldspring Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 8-2. Coldspring Landslide and Wildfire Hazard Area Extent and Location Map

8.6.2 Hazard Event History

The history of natural and non-natural hazard events in Coldspring is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 8-14 provides details on loss and damage in Coldspring during hazard events since the last hazard mitigation plan update.

Table 8-14. Hazard Event History in Coldspring

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Coldspring
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not experience any documented damages or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town adhered to the COVID-19 guidelines, with individuals working from home or practicing social distancing.
January 12, 2020	High Wind	N/A	High wind	The Town did not experience any documented damages or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not experience any documented damages or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not experience any documented damages or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not experience any documented damages or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not experience any documented damages or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not experience any documented damages or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not experience any documented damages or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not experience any documented damages or losses.
March 6, 2022	High Wind	N/A	High wind	The Town did not experience any documented damages or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Town did not experience any documented damages or losses.

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Coldspring
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Town did not experience any documented damages or losses.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

8.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Coldspring .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Coldspring reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town indicated the following:

- The Town decreased its hazard ranking for the Wildfire hazard from Medium to Low due to the limited fire fuel.

Table 8-15 shows Coldspring's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 8-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Medium
Flood	Medium
Landslide	High
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Low

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 8-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 8-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Coldspring 12	Bridge	X	-	2025-ColdSpringT-12	-
Coldspring 13	Bridge	X	-	2025-ColdSpringT-12	-
Coldspring 18	Bridge	X	-	2025-ColdSpringT-12	-
Coldspring Town Hall	Polling Place	X	-	2025-ColdspringT-01	-
Town of Coldspring	Municipal Hall	X	-	2025-ColdspringT-01	-

Source: Cattaraugus County 2024

8.6.4 Identified Issues

After a review of Coldspring's hazard event history, hazard rankings, hazard location, and current capabilities, Coldspring identified the following vulnerabilities within the community:

- The Town Hall, which is also a polling place, is a critical facility located in the Special Flood Hazard Area and may have an increased risk to flooding impacts.
- Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Town has one repetitive loss properties, but other properties may be impacted by flooding as well.
- The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The Town is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. The Town has many steep sloped areas throughout its jurisdiction and should determine local vulnerabilities to landslides threatening primary roadways and properties.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- The Town currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.

- The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- There are cell phone connectivity issues in the Town which negatively influences emergency communication. A lack of ability to communicate can impact an individual's ability to understand or learn how to reduce their risk to hazards and mitigate those risks. A lack of connectivity can also impact first responders, as they must be able to communicate during events or incidents associated with all hazards of concern.
- Critical facilities require backup power to ensure continuity of operations. The Town Highway Building (3017 Lebanon Road) does not have automatic backup power, which could impact the continuity of operations at the facility in the event of a utility or power failure. High winds severe weather and severe winter weather are known to cause utility failures, which would impact the continuity of operations at both critical facilities.
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including County Road 9 (Price Corners Road).
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Coldspring 12
 - Coldspring 13
 - Coldspring 18

8.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

8.7.1 Past Mitigation Action Status

Table 8-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

8.7.2 Additional Mitigation Efforts

Coldspring did not identify any additional mitigation efforts completed since the last HMP.

Table 8-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Coldspring-001	Implement/Encourage training for Code Enforcement Officers.	Flood	County DPW	<p>Problem: Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.</p> <p>Solution: Obtain/host specialist training and certification for floodplain managers.</p>	<p>1. No Progress 2. Code Enforcement could use training</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>
2020-Coldspring-002	Update the Flood Damage Prevention Ordinance to include freeboard	Flood	Town Board	<p>Problem: The Flood Damage Prevention Ordinance does not include the 2' freeboard requirement mandated by NYS.</p> <p>Solution: The Flood Damage Prevention Ordinance will be updated to include the 2' freeboard requirement mandated by NYS.</p>	<p>1. No Progress 2. Other Town priorities took precedence</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Coldspring-003	Continuous Public Education	Wildfire	County Planning	<p>Problem: Public needs to be educated on what they can do to protect their structures from wildfires.</p> <p>Solution: Provide information to residents, business owners, and organizations about what they can do to protect their structures from wildfires. This will be done via pamphlets and website resources and include such information as: the dissemination of American Red Cross evacuation centers, supplies to have on hand, listing of emergency telephone numbers</p>	<ol style="list-style-type: none">1. In Progress2. Looking to expand to outreach for all hazards	<ol style="list-style-type: none">1. Include2. Change to include outreach for all hazards3. Not applicable
2020-Coldspring-004	Protect the Town of Coldspring Highway Barn to the 0.2% annual chance flood event.	Flood	Engineer, Facility manager	<p>Problem: Town of Coldspring Highway Barn is located in the special flood hazard area and vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood event.</p> <p>Solution: The town will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the Highway Barn to protect it to the 0.2% annual chance flood event. Options include:</p>	<ol style="list-style-type: none">1. Complete2. The Highway Barn is already protected to the 0.2 percent event.	<ol style="list-style-type: none">1. Discontinue2. Not applicable3. The Highway Barn is already protected to the 0.2 percent event.

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				<ul style="list-style-type: none"> Elevation of facility Floodproofing of facility Mobile flood barriers <p>Once the most cost-effective option is identified, the town will carry out the option.</p>		
2020-Coldspring-005	Update the Emergency Operations Plan	All Hazards	County, Town	<p>Problem: The Town has an outdated emergency operation plan.</p> <p>Solution: Update the town's emergency operation plan.</p>	<p>1. In Progress</p> <p>2. Plan under review</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Coldspring-006	Update Building Codes	All Hazards	County, Town	<p>Problem: The Town has outdated building codes.</p> <p>Solution: The Town will update the town's building codes.</p>	<p>1. Ongoing capability</p> <p>2. Town codes are reviewed on an ongoing basis</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. Current capability</p>
2020-Coldspring-007	Improve internet access and cell service	Utility failure	Town	<p>Problem: The Town of Coldspring is a rural/underserved area with lack of accessibility to internet and cell service.</p> <p>Solution: Improve cell service and internet by working with telecommunications companies to install cell towers</p>	<p>1. In Progress</p> <p>2. Armstrong Internet is available throughout Town. There is still a need for a cell tower in the State Park/Coldspring area.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Coldspring-008	Backup power to the Town Hall and Highway Building	All hazards	Engineer, Town Board	<p>Problem: Backup power sources are necessary to maintain critical services for critical facilities. The Town Hall and Highway Building lack a permanent power source. The Town Hall location houses the Town Hall, Court, and Clerk, The Highway Building location houses the Highway Department, vehicles and equipment.</p> <p>Solution: The Town Engineer will research what size generators are necessary to supply backup power to the Town Hall and Highway Department. The town will then install backup power generators and necessary electrical components.</p>	<p>1. In Progress</p> <p>2. A new portable generator was purchased for the Town Hall. A generator for the Town Highway Building/Garage (3017 Lebanon Road) is needed.</p>	<p>1. Include</p> <p>2. Revise to remove Town Hall and add any additional facilities.</p> <p>3. Not applicable</p>
2020-Coldspring-009	Determine best action to protect property on County Rd 9/Price Corners and properties on Mat Rd	Flood, Severe Storm	Town Board, FPA	<p>Problem: Repetitive flooding at the property on County Road 9/ Price Corners and properties on May Road</p> <p>Solution: Conduct an engineering study to determine best action to prevent flooding of properties. The Town will then carry out the identified cost-effective action(s).</p>	<p>1. In Progress</p> <p>2. Project was completed on May Road</p>	<p>1. Include</p> <p>2. Revise to remove May Road</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Coldspring-010	Rock work, ditches, and banks cut back to facilitate snow removal during heavy snow events	Severe Winter Storms	Town Highway Department	<p>Problem: Town of Coldspring's roads flood due to snow melt causing hazardous driving conditions and an increase in traffic accidents.</p> <p>Solution: The town will cut back banks and ditches, as well as rock work so that snowplows can remove snow efficiently during heavy snowstorms</p>	1. Ongoing capability 2. Due to regular maintenance this is no longer an issue in the Town.	1. Discontinue 2. Not applicable 3. No longer relevant

8.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Coldspring participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 "Selecting Appropriate Mitigation Measures for Floodprone Structures" (March 2007)
- FEMA "Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards" (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Coldspring would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 8-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 8-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 8-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X			X			X			X
Flood	X	X		X	X		X		X	X
Landslide	X			X	X		X			X
Pandemic	X			X			X			X
Severe Storm	X	X		X	X		X		X	X
Severe Winter Storm	X	X		X	X		X			X
Utility Failure	X	X		X			X		X	X
Wildfire	X			X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 8-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-ColdSpringT-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-ColdSpringT-02	Repetitive Loss Properties	1	1	1	1	1	0	1	1	1	0	1	1	0	1	11	High
2025-ColdSpringT-03	Substantial Damage Management Plan	1	1	1	1	1	1	1	1	1	1	1	1	1	0	13	High
2025-ColdSpringT-04	Landslide Mitigation	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-ColdSpringT-05	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-ColdSpringT-06	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-ColdSpringT-07	Comprehensive Outreach Program	1	1	1	1	1	1	0	1	1	1	1	1	0	1	12	High
2025-ColdSpringT-08	Comprehensive Emergency Management Plan Update	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-ColdSpringT-09	Cellular Accessibility	1	1	1	1	0	0	0	1	1	1	0	1	1	0	9	Medium
2025-ColdSpringT-10	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-ColdSpringT-11	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-ColdSpringT-12	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-ColdspringT-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers										
Supporting Agencies:	Town Council										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Town Hall, which is also a polling place, is a critical facility located in the Special Flood Hazard Area and may have an increased risk to flooding impacts.										
Description of the Solution:	<p>The Town will notify the critical facility owners and managers of the facility's location in the flood hazard area. The Town will encourage each facility conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the facility owner or manager will carry out the option.</p>										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget										
Implementation Timeline:	Within 5 Years										
Goals Met:	1, 3, 5										
Benefits:	Ensures continuity of operations of several critical facilities in the Town.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.										
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.										
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.										
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.										
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facilities</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr><tr><td>Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events</td><td>Reduction in response times and delay of critical services in the immediate area.</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Relocate facilities	Relocation is expensive and results in loss or delay of critical services in the immediate area	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.
Action	Evaluation										
No Action	Current problem exists										
Relocate facilities	Relocation is expensive and results in loss or delay of critical services in the immediate area										
Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.										

Action 2025-ColdspringT-02. Repetitive Loss Properties

Lead Agency:	Code Enforcement										
Supporting Agencies:	Town Council										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Town has one repetitive loss properties, but other properties may be impacted by flooding as well.										
Description of the Solution:	The Town will conduct outreach to the impacted properties and will provide information on mitigation alternatives. After preferred mitigation measures are identified, the Town will collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/purchase/moving/elevating of the affected properties that experience frequent flooding. The parameters for this initiative would be funding, benefits versus cost, and willing participation of property owners.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA FMA, FMA SWIFT, Town Budget, County Budget, Property Owners										
Implementation Timeline:	3 years										
Goals Met:	1										
Benefits:	This action would foster comprehensive floodplain management by removing at risk properties from the flood hazard area or elevating properties to reduce the flood risk.										
Impact on Socially Vulnerable Populations:	Collecting data regarding homeowners that reside within flood prone areas provides an opportunity to introduce location-specific opportunities for assistance. Socially vulnerable populations may be able to have houses elevated or acquired when it would otherwise be unaffordable.										
Impact on Future Development:	Increased outreach to homeowners within a flood prone area will limit construction in areas that are prone to hazard events. Homes may be acquired, which will remove those structures from the floodplain and prevent future development on those sites.										
Impact on Critical Facilities/Lifelines:	Removing structures from the floodplain decreases the demand on utilities and emergency services including health and medical, law enforcement, and search and rescue.										
Impact on Capabilities:	Outreach which promotes the removal of risk from the immediate floodplain via acquisition of properties will free up resources for search and rescue and other emergency operations as needed. This action will enhance the Town's current NFIP capabilities.										
Climate Change Considerations:	Climate change is likely to increase the frequency and severity of severe rainfall, flash flooding, riverine flooding, and coastal flooding from sea level rise and storm surge events. Removing structures from the floodplain will reduce the response and recovery costs as a result of these events and decrease the loss of human life as a result of these events. Elevating structures will reduce the recovery costs.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Levee around floodplain</td><td>Costly, not enough room.</td></tr><tr><td>Deployable flood barriers</td><td>Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Levee around floodplain	Costly, not enough room.	Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.
Action	Evaluation										
No Action	Current problem exists										
Levee around floodplain	Costly, not enough room.										
Deployable flood barriers	Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.										

Action 2025-ColdspringT-03. Substantial Damage Management Plan

Lead Agency:	Code Enforcement										
Supporting Agencies:	Town Council, Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Officials in NFIP-participating communities are responsible for regulating all development in SFHAs by issuing permits and enforcing local floodplain requirements, including Substantial Damage, for the repairs of damaged buildings. After any disaster event, they must:</p> <ul style="list-style-type: none"> Determine where the damage occurred within the community and if the damaged structures are in an SFHA. Determine what to use for "market value" and cost to repair; uniformly applying regulations will protect against liability and promote equitable administration. Determine if repairing plus improving the damaged structure equals or exceeds 50% of the structure's pre-damage value. Require permits for floodplain development. <p>The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The Town is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.</p>										
Description of the Solution:	<p>The Town will develop a Substantial Damage Management Plan, following the six-step planning process in 2021 Developing a Substantial Damage Management Plan (https://crsresources.org/files/500/developing_subst_damage_mgmt_plan.pdf). This plan will outline responsibilities for Substantial Damage determinations, determining market value, and permit approval processes following a disaster event.</p>										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will provide a guidance document to determine substantial damage in the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may disproportionately be impacted by substantial damages.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	This action will produce substantial damage guidance for Town officials to use.										
Climate Change Considerations:	Climate change is leading to an increase in frequency and intensity of precipitation events, which also increases flooding and may lead to a main failure.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources following disaster events</td> <td>Resources may not be available during major widespread events</td> </tr> <tr> <td>Establish MOUs with outside agencies to conduct Substantial Damage Determinations</td> <td>A plan outlining responsibility is still necessary to prevent missing important requirements</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources following disaster events	Resources may not be available during major widespread events	Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources following disaster events	Resources may not be available during major widespread events										
Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements										

Action 2025-ColdspringT-04. Landslide Mitigation

Lead Agency:	Engineering										
Supporting Agencies:	Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. The Town has many steep sloped areas throughout its jurisdiction and should determine local vulnerabilities to landslides threatening primary roadways and properties.										
Description of the Solution:	<p>The Town Engineer will complete an assessment to identify an appropriate, cost-effective method to mitigation landslide risk within primary roads throughout the Town. Possible mitigation measures include:</p> <ul style="list-style-type: none">• Construction of retaining walls, soil nailing, ground anchor walls• Install horizontal drains to reduce soil saturation• Cut banks along water ways to prevent oversaturated soils from falling• Install netting										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by landslide along Town roads. Keeping the roadway open to traffic also permits vulnerable populations to travel to critical appointments.										
Impact on Future Development:	Future development in the impacted area will be less likely to be impacted by landslides.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Reconstruct roadways outside of hazard area</td><td>Not feasible</td></tr><tr><td>Close roads and reroute traffic around hazard area</td><td>Not feasible, would cause confusion amongst travelers</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Reconstruct roadways outside of hazard area	Not feasible	Close roads and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers		
Action	Evaluation										
No Action	Current problem exists										
Reconstruct roadways outside of hazard area	Not feasible										
Close roads and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers										

Action 2025-ColdspringT-05. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Council		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities.		
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-ColdspringT-06. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement										
Supporting Agencies:	Town Council										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Town does not have a flood damage prevention ordinance. This ordinance, or local law, must include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.										
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is created to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will adopt the Flood Damage Prevention Ordinance.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	The ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.										
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.										
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.										
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.										
Climate Change Considerations:	The ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Only freeboard requirements</td><td>Other areas of the ordinance which need to be updated would not be</td></tr><tr><td>Leave NFIP</td><td>Residents lose flood insurance coverage</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Only freeboard requirements	Other areas of the ordinance which need to be updated would not be	Leave NFIP	Residents lose flood insurance coverage
Action	Evaluation										
No Action	Current problem exists										
Only freeboard requirements	Other areas of the ordinance which need to be updated would not be										
Leave NFIP	Residents lose flood insurance coverage										

Action 2025-ColdspringT-07. Comprehensive Outreach Program

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Council, Cattaraugus County										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on hazard risks and methods of mitigation measures, including those for dam and levee failure, flood, landslide, pandemic, severe storm, severe winter storm, utility failure, and wildfire. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for each individual hazard of concern.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the current public education and outreach program in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the various hazards which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of potential hazards. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's already existing public education and outreach program and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from hazards and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Town</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-ColdspringT-08. Comprehensive Emergency Management Plan Update

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Council, Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Town Supervisor will lead the update of the Comprehensive Emergency Management Plan (CEMP), with support from the Town Board and Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Town will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Town will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Town to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Town performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will create a new planning and response capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Town CEMP will remain undeveloped</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped

Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped										

Action 2025-ColdspringT-09. Cellular Accessibility

Lead Agency:	Town Council										
Supporting Agencies:	Cellular Service Providers										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	There are cell phone connectivity issues in the Town which negatively influences emergency communication. A lack of ability to communicate can impact an individual's ability to understand or learn how to reduce their risk to hazards and mitigate those risks. A lack of connectivity can also impact first responders, as they must be able to communicate during events or incidents associated with all hazards of concern.										
Description of the Solution:	The Town will work with cellular service providers to identify locations which are still experiencing problems with connectivity. Cellular service providers will improve lines and install additional towers to ensure connectivity and reduce the risk of utility failure.										
Estimated Cost:	Medium										
Potential Funding Sources:	Cellular Providers, Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	Residents, business owners, first responders, and workers within the Town will have better access to cellular service.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may not have the financial means to purchase a cellular service plan with high speeds to ensure connectivity with current capabilities. This action will assist in providing these populations with adequate cellular service.										
Impact on Future Development:	Connectivity will be available for individuals living in future developed areas.										
Impact on Critical Facilities/Lifelines:	Critical facilities may benefit from this action because it allows them to have increased communication and connections to other critical facilities and emergency responders.										
Impact on Capabilities:	This action will increase the Town's ability to effectively communicate.										
Climate Change Considerations:	Climate change is leading to an increase in severity and frequency in severe weather.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Town buys signal extender for all properties</td><td>Cost prohibitive</td></tr><tr><td>Rent Cellular on Wheels (COWs)</td><td>Cost prohibitive; only extends service in a limited area</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Town buys signal extender for all properties	Cost prohibitive	Rent Cellular on Wheels (COWs)	Cost prohibitive; only extends service in a limited area		
Action	Evaluation										
No Action	Current problem exists										
Town buys signal extender for all properties	Cost prohibitive										
Rent Cellular on Wheels (COWs)	Cost prohibitive; only extends service in a limited area										

Action 2025-ColdspringT-10. Generators at Critical Facilities

Lead Agency:	Engineering		
Supporting Agencies:	Town Council, Highway Department		
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Town Highway Building (3017 Lebanon Road) does not have automatic backup power, which could impact the continuity of operations at the facility in the event of a utility or power failure. High winds severe weather and severe winter weather are known to cause utility failures, which would impact the continuity of operations at both critical facilities.		
Description of the Solution:	The Town Engineer will conduct a study to determine the required generator capacity to support the critical facilities. The Town will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for this critical facility and its operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.		
Estimated Cost:	High		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget, Utility Fees		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4, 5		
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.		
Impact on Future Development:	This action results in protection of critical facilities that could support future development.		
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.		
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.		
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives	Action		Evaluation
	No Action		-
	Microgrid		Costly and difficult to implement.
	Solar panels and battery backup		Solar power is unlikely to be able to provide battery power for extended power failure events.

Action 2025-ColdspringT-11. Floodprone Roads

Lead Agency:	Engineering		
Supporting Agencies:	Code Enforcement, Highway Department		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including County Road 9 (Price Corners Road).		
Description of the Solution:	The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include: <ul style="list-style-type: none"> • Elevation of roadways • Installation or improvement of drainage systems • Regrading of roadway and soils • Resurfacing or reshaping roadways 		
Estimated Cost:	TBD after mitigation technique is chosen		
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Relocate all flood-prone road system		Not feasible
	Raise all flood prone roads		Cost prohibitive

Action 2025-ColdspringT-12. Bridge Evaluations

Lead Agency:	Highway Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none"> • Coldspring 12 • Coldspring 13 • Coldspring 18 										
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Remove bridges</td> <td>May cause significant traffic problems</td> </tr> <tr> <td>Replace bridges</td> <td>Cost prohibitive</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Remove bridges	May cause significant traffic problems	Replace bridges	Cost prohibitive		
Action	Evaluation										
No Action	Current problem exists										
Remove bridges	May cause significant traffic problems										
Replace bridges	Cost prohibitive										

9. TOWN OF CONEWANGO

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Conewango with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Conewango, describes who participated in the planning process, assesses Conewango's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

9.1 HAZARD MITIGATION PLANNING TEAM

The Town of Conewango identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Highway Superintendent represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 9-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 9-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Bryan Farmer, Highway Superintendent Address: 4762 Route 241 Conewango Valley, NY 14726 Phone Number: (716) 490-2173 Email: bryanjfarmer@icloud.com	Name/Title: Scott Patterson, Deputy Highway Superintendent Address: 4762 Route 241 Conewango Valley, NY 14726 Phone Number: (716) 796-4705 Email: scott_76_p@icloud.com
National Flood Insurance Program Floodplain Administrator	
Name/Title: Jordan Haines, Code Enforcement Official Address: 4762 Route 241 Conewango Valley, NY 14726 Phone Number: (716) 364-3324 Email: Unavailable	

9.2 COMMUNITY PROFILE

The Town of Conewango lies in the southwestern part of Cattaraugus County in western New York State and has a total area of 36.14 square miles. Conewango Creek is the principal stream the town is named after. The town is bordered to the north by the Town of Leon, to the east is the Town of Napoli, to the south is the Town of Randolph, and to the west is the Town of Ellington in Chautauqua County.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 19.7 percent of the

population is 5 years of age or younger, 12.3 percent is 65 years of age or older, 1.7 percent is non-English speaking, 48.2 percent is below the poverty threshold, and 9 percent is considered disabled.

9.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Conewango performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Conewango to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

9.3.1 Planning and Regulatory Capability and Integration

Table 9-2 summarizes the planning and regulatory tools that are available to Conewango.

Table 9-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 2, 2016: Uniform Fire Prevention and Building Code	State and Local	Code Enforcement
How has or will this be integrated with the HMP and how does this reduce risk?				
This local law provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code) and the State Energy Conservation Construction Code (the Energy Code) in this Town. This local law is adopted pursuant to section 10 of the Municipal Home Rule Law. Except as otherwise provided in the Uniform Code, other state law, or other section of this local law, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions this local law.				
Zoning/Land Use Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Subdivision Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Site Plan Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to “caveat emptor,” a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.				
Growth Management	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Environmental Protection Ordinance(s)	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Flood Damage Prevention Ordinance	Yes	Local Law 1, 1998: Flood Damage Prevention	Federal, State, County and Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? Promotes public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas. A. Regulate uses which are dangerous to health, safety and property due to water or erosion hazards or which result in damaging increases in erosion or in flood heights or velocities. B. Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction. C. Control the alteration of natural floodplains, stream channels and natural protective barriers which are involved in the accommodation of floodwaters. D. Control filling, grading, dredging and other development which may increase erosion or flood damages. E. Regulate the construction of flood barriers which will unnaturally divert floodwaters or which may increase flood hazards to other lands. F. Qualify for and maintain participation in the National Flood Insurance Program.				
Wellhead Protection	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Emergency Management Ordinance	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Climate Change Ordinance	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Other	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
PLANNING DOCUMENTS				
General/Comprehensive Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Capital Improvement Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Disaster Debris Management Plan	Yes	Disaster Debris Management Plan	County	OES
How has or will this be integrated with the HMP and how does this reduce risk? Minimizing the amount of debris left behind on residential and commercial properties and roadways reduces post-disaster recovery costs and accelerates a return to normalcy following a disaster event.				
Floodplain Management or Watershed Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Stormwater Management Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Open Space Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?

9.3.2 Development and Permitting Capability

Table 9-3 summarizes the capabilities of Conewango to oversee and track development.

Table 9-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits? <ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	Yes	Code Enforcement Officer
Are permits tracked by hazard area? (For example, floodplain development permits.)	No	-
Do you have a buildable land inventory? <ul style="list-style-type: none"> If you have a buildable land inventory, please describe 	No	-
Describe the level of buildout in your jurisdiction.	N/A	There is area in the Town for future development.

9.3.3 Administrative and Technical Capability

Table 9-4 summarizes potential staff and personnel resources available to Conewango and their current responsibilities that contribute to hazard mitigation.

Table 9-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	No	-
Zoning Board of Adjustment	No	-
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	No	-
Construction/Building/Code Enforcement Department	Yes	Code Enforcement enforces the construction code and administers the NFIP.
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	Yes	Town, County and State
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Emergency manager	No	-
Grant writers	Yes	
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

9.3.4 Fiscal Capability

Table 9-5 summarizes financial resources available to Conewango.

Table 9-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	No
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	No
Impact fees for homebuyers or developers of new development/homes	No
Stormwater utility fee	No
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	Yes
Incur debt through private activity bonds	Yes
Withhold public expenditures in hazard-prone areas	Yes
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	Yes

9.3.5 Education and Outreach Capability

Table 9-6 summarizes the education and outreach resources available to Conewango.

Table 9-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Town Supervisor
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-

Outreach Resources	Available? (Yes/No)	Comment
Warning systems for hazard events	Yes	County/Fire Department
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

9.3.6 Community Classifications

Table 9-7 summarizes classifications for community programs available to Conewango.

Table 9-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-

9.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 9-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 9-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Interruption	Moderate
Wildfire	Moderate

9.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 9-1 is responsible for maintaining this information.

9.4.1 NFIP Statistics

Table 9-9 summarizes the NFIP policy and claim statistics for Conewango.

Table 9-9. Conewango NFIP Summary of Policy and Claim Statistics

# Policies	0
# Claims (Losses)	2
Total Loss Payments	\$2,503.63
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

9.4.2 Flood Vulnerability Summary

Table 9-10 provides a summary of the NFIP program in Conewango.

Table 9-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	

NFIP Topic	Comments
Describe areas prone to flooding in your jurisdiction.	Property on Morey St prone to flooding when we receive substantial rainfall
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	None
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Coordination with insurance and inspections
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	None
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Permit Review
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: June 24, 1992 CAV: April 15, 2011
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 1, 1998: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	July 8, 1998

NFIP Topic	Comments
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Zoning considers flood risk
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

9.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 9-11 through Table 9-13.

Table 9-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 9-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any recent major development or infrastructure occurred between 2019 to present.

* Only location-specific hazard zones or vulnerabilities identified.

Table 9-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any known or anticipated major development or infrastructure in the next five years.

9.6 JURISDICTIONAL RISK ASSESSMENT

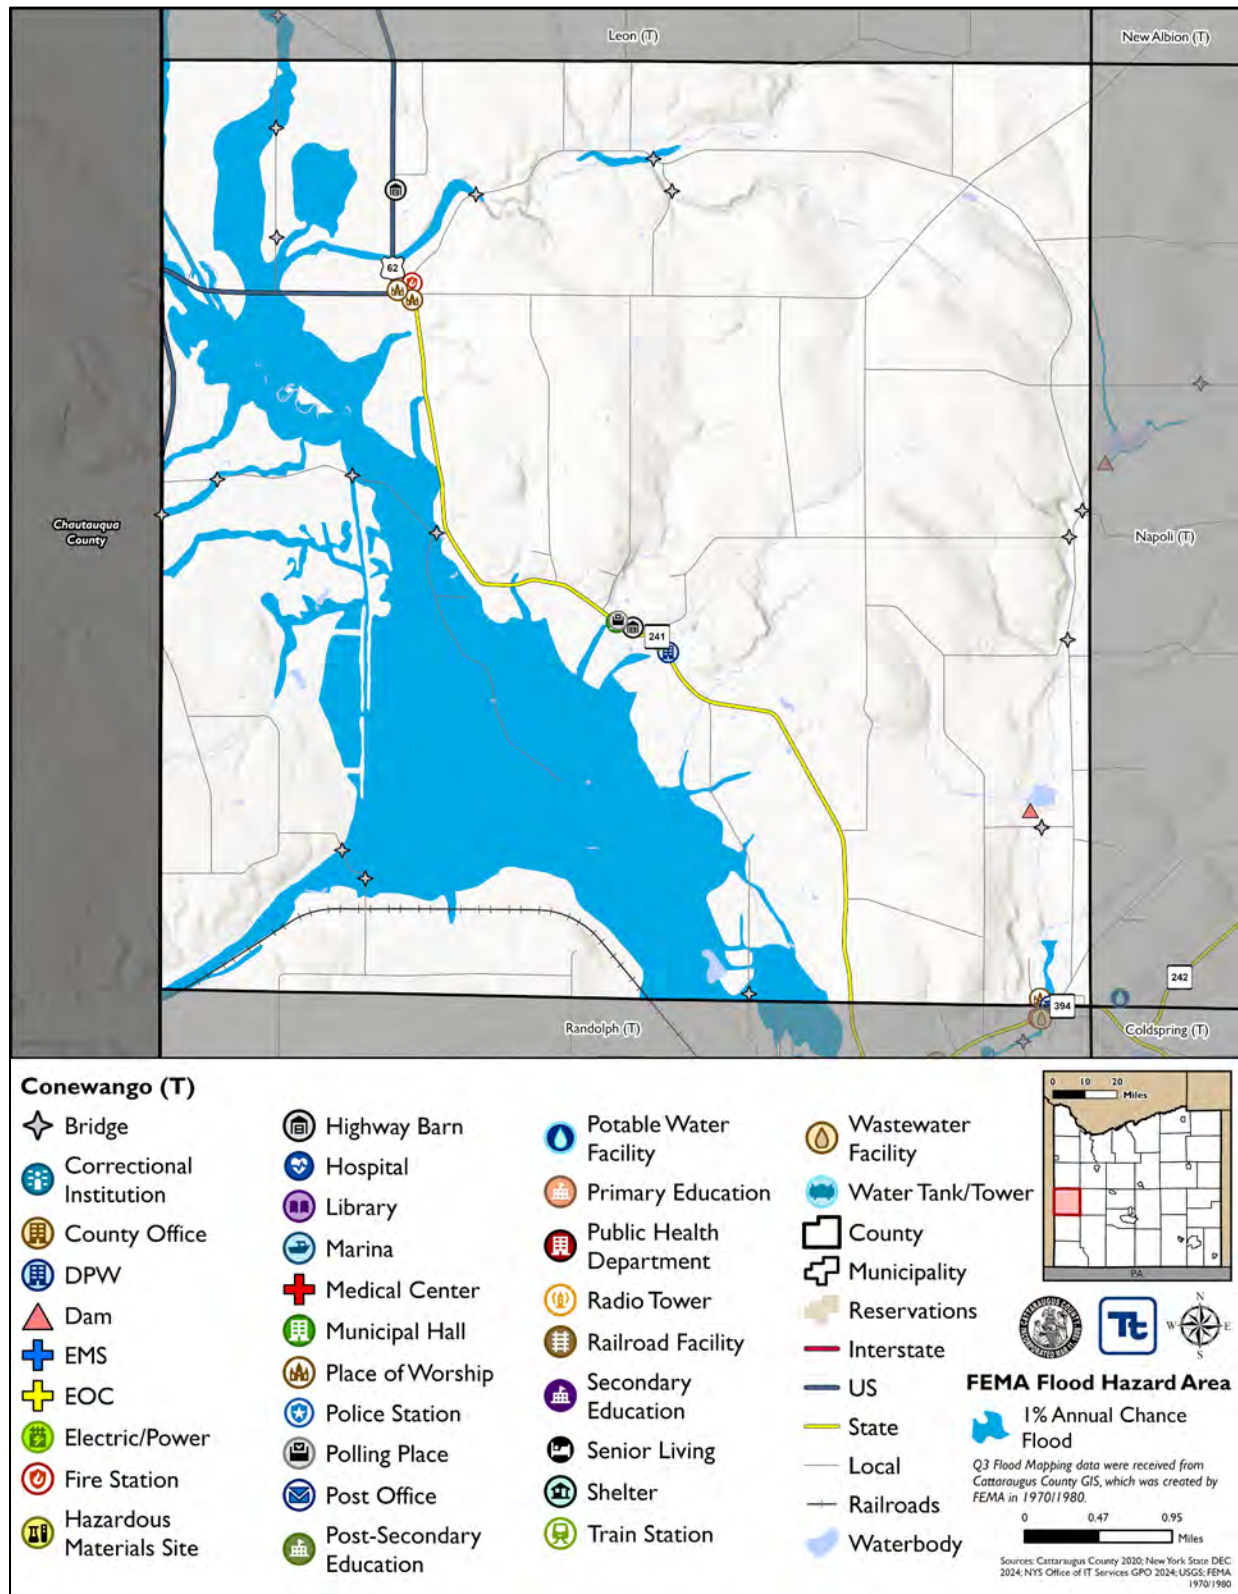

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Conewango's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

9.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 9-1 through Figure 9-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Conewango has significant exposure. The maps show the location of potential new development, where available.

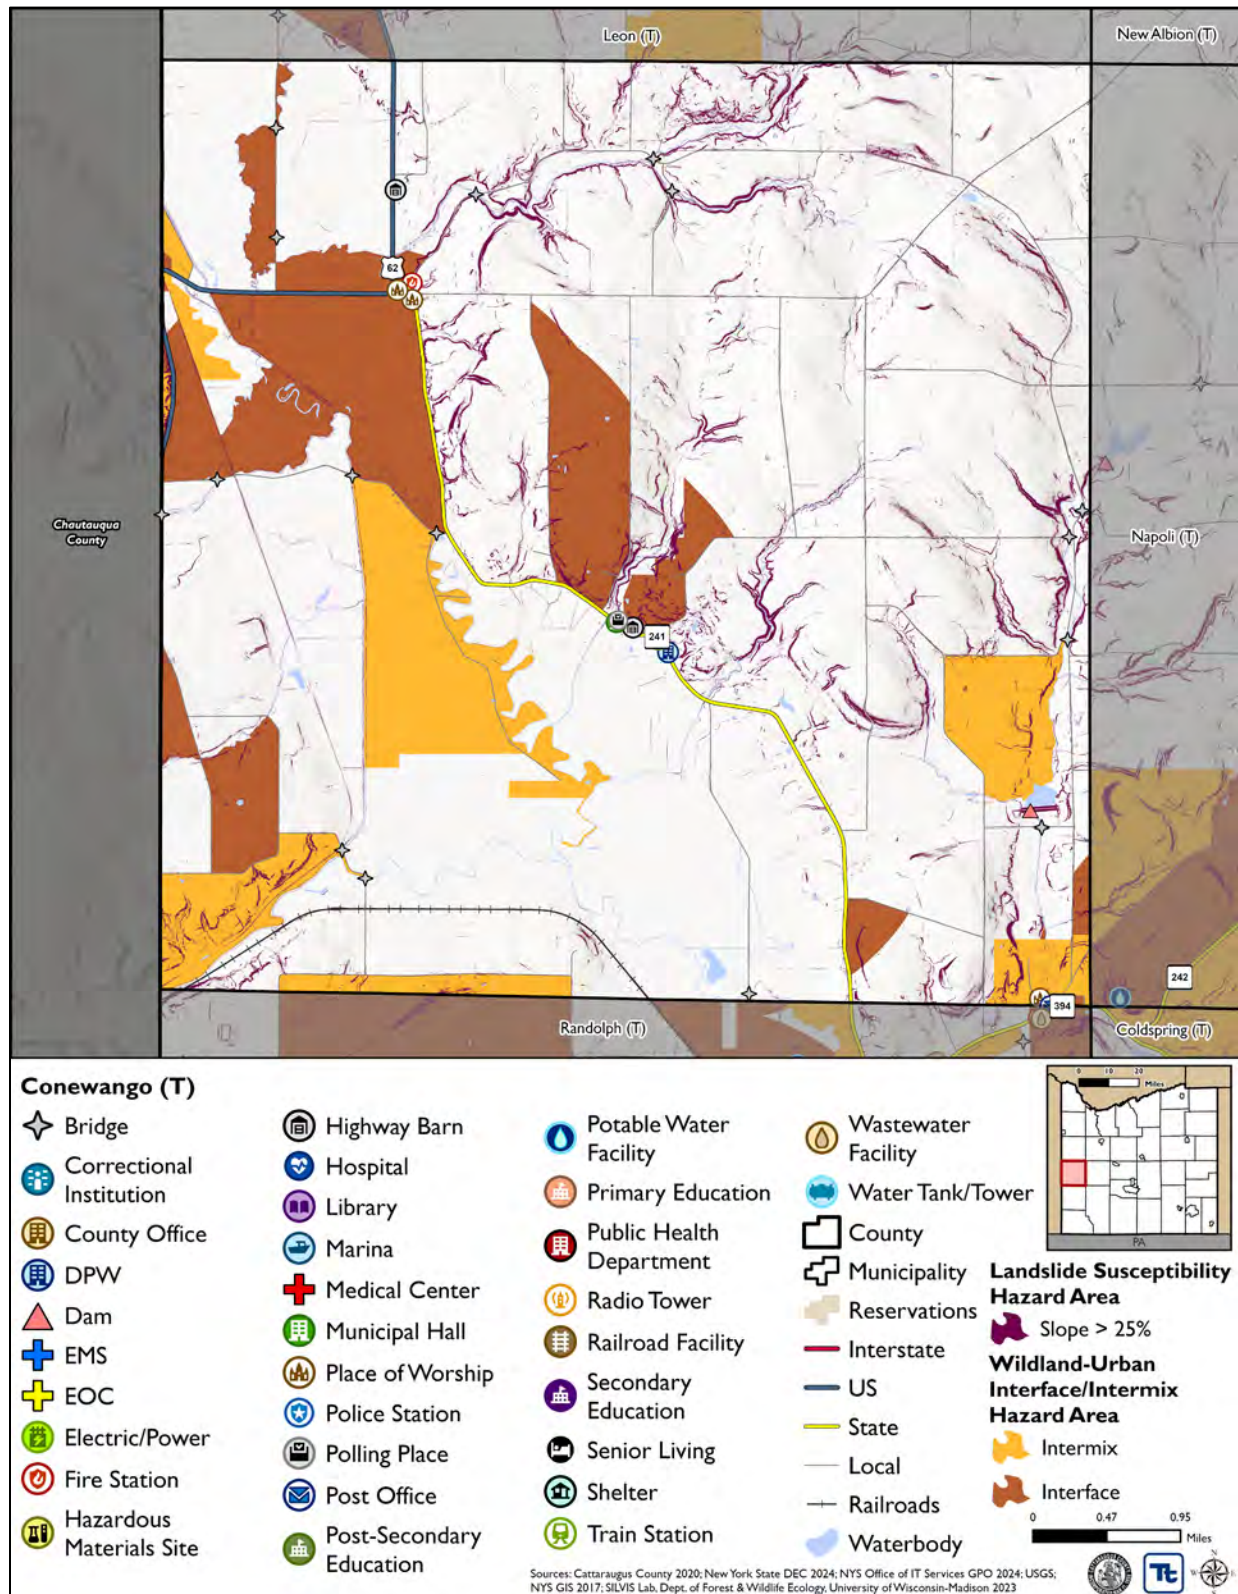

Figure 9-1. Conewango Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 9-2. Conewango Landslide and Wildfire Hazard Area Extent and Location Map

9.6.2 Hazard Event History

The history of natural and non-natural hazard events in Conewango is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 9-14 provides details on loss and damage in Conewango during hazard events since the last hazard mitigation plan update.

Table 9-14. Hazard Event History in Conewango

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Conewango
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur any documented damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town did not incur any documented damage or losses.
January 12, 2020	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur any documented damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur any documented damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur any documented damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur any documented damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur any documented damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not incur any documented damage or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur any documented damage or losses.
March 6, 2022	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Town did not incur any documented damage or losses.

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Conewango
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Town did not incur any documented damage or losses.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

9.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Conewango .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Conewango reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town agreed with the preliminary rankings.

Table 9-15 shows Conewango's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 9-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Medium
Flood	High
Landslide	Low
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 9-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 9-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Conewango 01	Bridge	X	-	2025-ConewangoT-14	-
Conewango 02	Bridge	X	-	2025-ConewangoT-14	-
Conewango 05	Bridge	X	-	2025-ConewangoT-14	-

East Randolph United Church	Place of Worship	X	-	2025-ConewangoT-01	-

Source: Cattaraugus County 2024

In addition to critical facilities that are exposed to flooding, the following high hazard dam is located in Conewango:

- Conewango Creek Site 16a Dam

9.6.4 Identified Issues

After a review of Conewango's hazard event history, hazard rankings, hazard location, and current capabilities, Conewango identified the following vulnerabilities within the community:

- East Randolph United Church is located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.
- Conewango Creek Site 16a Dam is a Class I High Hazard Dam that is located on Elm Creek. The dam is owned by the County of Cattaraugus. Failure of the dam could result in inundation of residential and commercial properties, woodland areas, agricultural and rural lands, and transportation routes including Walker Road. Although the dam was last inspected in 2022, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.

- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- Undersized drainage often results in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the drainage system. Several drainage pipes in Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters. These pipes are located on the following roads:
 - Myers Road
 - Walker Road
 - Flood Road
 - Snow Hill Road
 - Billion Dollar Road
 - Northeast Road
- Cowins Corners Road has been eroded due to floodwaters stemming from severe storms and melted snow from severe winter storms in Clear Creek. Cowins Corners Road may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding.
- Debris, including sediment accumulation, fallen tree branches and limbs, and rubbish, accumulate in waterbodies when heavy rains from severe storms or heavy snowmelt from severe winter storms cause the items to collect and get taken downstream. Debris jams occur in Clear Creek, causing flooding on several Cowins Corners Road. Dead trees and debris need to be removed from the creek. There may be restrictions in place by the Army Corps and NYS DEC for the protection of the waterway.
- The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- The Town does not have an established tree trimming program in place. It is unknown the safety of trees throughout the Town. During wind events or heavy snow, falling tree branches can damage utilities and private property.
- Critical facilities require backup power to ensure continuity of operations. The Town Hall and the Highway Facility do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.
- Properties in the Town have been subject to flooding impacts. Morey Street has a property which experiences damages during substantial periods of heavy rain, but other properties may be impacted by flooding as well.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure

of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:

- Conewango 01
- Conewango 02
- Conewango 05
- Conewango 07
- Conewango 08
- Conewango 14
- Conewango 20
- Conewango 29
- Conewango 31

9.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

9.7.1 Past Mitigation Action Status

Table 9-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

9.7.2 Additional Mitigation Efforts

Conewango did not identify any additional mitigation efforts completed since the last HMP.

Table 9-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Conewango-001	Training for Code Enforcement Officers	County DPW	Flood	<p>Problem: Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.</p> <p>Solution: Obtain/host specialist training and certification for floodplain managers.</p>	<p>1. No Progress 2. Lack of training availability</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>
2020-Conewango-002	Update the Flood Damage Prevention Ordinance	Town Board	Flood	<p>Problem: The Flood Damage Prevention Ordinance does not include the 2' freeboard requirement mandated by NYS.</p> <p>Solution: The Flood Damage Prevention Ordinance will be updated to include the 2' freeboard requirement mandated by NYS.</p>	<p>1. No Progress 2. Town prioritized other projects</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>
2020-Conewango-003	Public Education - wildfire	County Planning	Wildfire	<p>Problem: Public needs to be educated on what they can do to protect their structures from wildfires.</p> <p>Solution: Provide information to residents, business owners, and</p>	<p>1. No Progress 2. Town prioritized other projects</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				organizations about what they can do to protect their structures from wildfires.		
2020-Conewango-004	Protect the East Randolph United Church to the 500-year flood level.	Floodplain Administrator	Flood	<p>Problem: East Randolph United Church is in the Special Hazard Flood Area.</p> <p>Solution: The FPA will contact the facility manager and discuss options for protecting the facility to the 500-year flood level.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Conewango-005	Improved size of sluice pipes in selected locations.	Town Highway Department	Flood	<p>Problem: Sluice pipes are undersized on Myers Road, Walker Road, Flood Road, Snow Hill Road, Billion Dollar Road, Northeast Road.</p> <p>Solution: Pending results of engineer study, install larger sluice pipe on select roads.</p>	<p>1. No Progress</p> <p>2. Funding constraints</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Conewango-006	Cowins Corners Road repairs	Town Highway Department	Flood	<p>Problem: Cowins Corners Road washes out because of flooding from the Creek.</p> <p>Solution: Clear out the creek bed.</p>	<p>1. No Progress</p> <p>2. Funding constraints</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Conewango-007	Update municipal Emergency Response Plan	Town Board, Town Highway Department, County EMO	All	<p>Problem: The current Emergency Response Plan may not respond to current emergency needs the Town.</p> <p>Solution: Update the municipal EOP.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Conewango-008	Tree trimming	Town Board	All	<p>Problem: Tree limbs threaten electrical wires, buildings and homes.</p> <p>Solution: The town will establish a tree trimming program. The program will include conducting tree inventories to determine which ones pose a threat in the event of a storm. Once identified, the Town will trim or remove trees that pose a threat.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Conewango-009	Backup generator at Town Hall/Highway Department	Town Board, Town Highway Department	All	<p>Problem: Town Hall and Highway Department provide critical services and these lack backup generators for times when electrical service fails.</p> <p>Solution: The town will purchase and install the generator and necessary electrical components to provide backup power for the Town Hall/Highway Department facility.</p>	<p>1. No Progress</p> <p>2. Funding constraints</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Conewango-010	Work with vulnerable and repetitive loss property owner to determine appropriate mitigation technique.	Town Board, FPA, property owners	Flood	<p>Problem: Identified properties have already been flooded or are at risk</p> <p>Solution: The Town will work with the property owner to discuss mitigation options (elevation, buyout, etc.) and help find funding sources.</p>	<p>1. No Progress</p> <p>2. Funding constraints</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

9.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Conewango participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Conewango would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 9-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 9-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 9-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X	X							X	X
Flood	X	X	X	X	X		X	X	X	X
Landslide	X									X
Pandemic	X			X			X			X
Severe Storm	X	X	X		X			X	X	X
Severe Winter Storm	X	X	X		X			X	X	X
Utility Failure	X	X	X					X		X
Wildfire	X			X			X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 9-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total

Action 2025-ConewangoT-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	East Randolph United Church is located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.										
Description of the Solution:	<p>The Town will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facility to protect it to the 500-year flood level. Facility managers will be informed of potential mitigation measures. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the Town will carry out the option.</p>										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget										
Implementation Timeline:	Within 5 Years										
Goals Met:	1, 3, 5										
Benefits:	Ensures continuity of operations of several critical facilities in the Town.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.										
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.										
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.										
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.										
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facility</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr><tr><td>Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events</td><td>Reduction in response times and delay of critical services in the immediate area.</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.
Action	Evaluation										
No Action	Current problem exists										
Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area										
Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.										

Action 2025-ConewangoT-02. Conewango Creek Site 16a Dam Rehab

Lead Agency:	County of Cattaraugus										
Supporting Agencies:	County Engineer, County OES, NYDEC, Municipal Engineer										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Conewango Creek Site 16a Dam is a Class I High Hazard Dam that is located on the Elm Creek. The dam is owned by the County of Cattaraugus. Failure of the dam could result in inundation of residential and commercial properties, woodland areas, agricultural and rural lands, and transportation routes including Walker Road. Although the dam was last inspected in 2022, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.										
Description of the Solution:	The Municipal Engineer will work with the County of Cattaraugus to complete an engineering study of Conewango Creek Site 16a Dam. The Town will also request information and input from its Highway department and the County regarding impacted roadways. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Town and the County of Cattaraugus will pursue funding support, permit approval from NYSDEC, and implement the cost-effective measures.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, HHPD										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3, 4, 6, 7										
Benefits:	This action will improve the safety and security of those who live within the dam inundation areas of the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within the Special Flood Hazard Area and inundation areas where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	Future development located in or near the dam inundation area will be further protected from a dam failure event.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event due to projected increases in precipitation. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Decommission Dam</td><td>High cost, flood risk for nearby infrastructure increased, loss an environmental, flood control, and stormwater management resource.</td></tr><tr><td>Elevate nearby structures</td><td>Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Decommission Dam	High cost, flood risk for nearby infrastructure increased, loss an environmental, flood control, and stormwater management resource.	Elevate nearby structures	Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions
Action	Evaluation										
No Action	Current problem exists										
Decommission Dam	High cost, flood risk for nearby infrastructure increased, loss an environmental, flood control, and stormwater management resource.										
Elevate nearby structures	Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions										

Action 2025-ConewangoT-03. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.		
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-ConewangoT-04. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-ConewangoT-05. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance

No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-ConewangoT-06. Pandemic Education and Outreach

Lead Agency:	Town Supervisor		
Supporting Agencies:	Town Board, Cattaraugus County		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.		
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	1 year		
Goals Met:	1, 2, 3, 4		
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.		
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.		
Impact on Future Development:	Not applicable		
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.		
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.		
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action	Evaluation	
	No Action	Current problem exists	
	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	
	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance	

Action 2025-ConewangoT-07. Undersized Drainage

Lead Agency:	Highway Department		
Supporting Agencies:	Code Enforcement, Engineer		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	<p>Undersized drainage often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the drainage system. Several drainage pipes in Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters. These pipes are located on the following roads:</p> <ul style="list-style-type: none">• Myers Road• Walker Road• Flood Road• Snow Hill Road• Billion Dollar Road• Northeast Road.		
Description of the Solution:	The Town Engineer will complete an engineering survey of the drainage systems in Town that are undersized and contribute to flooding to determine the proper size necessary to provide stormwater capacity. The Town Highway Department will complete the necessary upsizing for the culverts.		
Estimated Cost:	TBD after study is complete		
Potential Funding Sources:	FEMA HMA, CHIPS, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.		
Impact on Capabilities:	Identifying drainage systems that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes drainage systems to meet changing stormwater needs as the result of climate change.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove roadway		Roadway cannot be removed

	Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.
--	-------------	--

DRAFT

Action 2025-ConewangoT-08. Road Erosion Mitigation

Lead Agency:	Highway Department										
Supporting Agencies:	Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Cowins Corners Road has been eroded due to floodwaters stemming from severe storms and melted snow from severe winter storms in Clear Creek. Cowins Corners Road may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding.										
Description of the Solution:	The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include: <ul style="list-style-type: none">• Elevation of roadways• Installation or improvement of drainage systems• Regrading of roadway and soils• Resurfacing or reshaping roadways										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate all eroded road system</td><td>Not feasible</td></tr><tr><td>Raise all eroded roads</td><td>Cost prohibitive</td></tr></tbody></table>		Action	Evaluation	No Action	Current problem exists	Relocate all eroded road system	Not feasible	Raise all eroded roads	Cost prohibitive	
Action	Evaluation										
No Action	Current problem exists										
Relocate all eroded road system	Not feasible										
Raise all eroded roads	Cost prohibitive										

Action 2025-ConewangoT-09. Debris Removal

Lead Agency:	Highway Department		
Supporting Agencies:	Town Board, NYS DEC, USACE		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Debris, including sediment accumulation, fallen tree branches and limbs, and rubbish, accumulate in waterbodies when heavy rains from severe storms or heavy snowmelt from severe winter storms cause the items to collect and get taken downstream. Debris jams occur in Clear Creek, causing flooding on several Cowins Corners Road. Dead trees and debris need to be removed from the creek. There may be restrictions in place by the Army Corps and NYS DEC for the protection of the waterway.		
Description of the Solution:	The Highway Department will assess the feasibility and cost-effectiveness of a debris maintenance/removal program to prevent future flooding surrounding Clear Creek. The Town will work with USACE and NYS DEC to obtain any necessary permitting for debris removal.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, Town Budget, NYS DEC		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 2		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage to properties. The natural ecosystem is cleaned and can return to a thriving habitat.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development along or near Clear Creek will have its risk of flood impacts reduced.		
Impact on Critical Facilities/Lifelines:	Not applicable		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action removed debris from waterways, reducing the risk of back-flooding from debris pile-ups.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input checked="" type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Elevate nearby roads		Cost prohibitive
	Acquire all properties which flood		Cost prohibitive

Action 2025-ConewangoT-10. Comprehensive Emergency Management Plan Update

Lead Agency:	Town Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Town will update the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Town will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Town will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Town to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Town performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Town CEMP will remain undeveloped</td> </tr> </tbody> </table>		Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped	
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped										

Action 2025-ConewangoT-11. Tree Maintenance Program

Lead Agency:	Highway Department										
Supporting Agencies:	Utility Companies, Property Owners										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Town does not have an established tree trimming program in place. It is unknown the safety of trees throughout the Town. During wind events or heavy snow, falling tree branches can damage utilities and private property.										
Description of the Solution:	The Town will pursue funding support to have a forester assess trees, complete deed searches to verify Town right of way in targeted areas and then have the tree removal completed by qualified personnel. Implement, review, and enforce municipal policies and programs to prevent trees from threatening lives and impacting power availability/interruption in conjunction with property owners and utility companies.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will result in the reduction of risk surrounding power outages by minimizing potential impacts from trees on utility lines.										
Impact on Socially Vulnerable Populations:	Some socially vulnerable population rely on power utilities for everyday care. If power outages are caused by a lack of tree maintenance, lives could potentially be at risk.										
Impact on Future Development:	This action assists in the protection of future development from impacts caused by tree collapses or branch falls as a result of severe storms and severe winter storms.										
Impact on Critical Facilities/Lifelines:	Utility lines provide power to residencies, private businesses, government entities, and various providers. Not maintaining trees, tree limbs, or tree branches may impact the availability of power during severe weather and severe winter weather events.										
Impact on Capabilities:	The creation of a tree maintenance program would be a new capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to trees or tree limbs/branches falling or impacting utility lines and property.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input checked="" type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input checked="" type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Do not contact utility companies</td> <td>Trees along utility lines may impact power during severe weather and severe winter weather events</td> </tr> <tr> <td>Do not contact property owners</td> <td>Trees on private residencies may impact power during severe weather and severe winter weather events</td> </tr> </tbody> </table>		Action	Evaluation	No Action	Current problem exists	Do not contact utility companies	Trees along utility lines may impact power during severe weather and severe winter weather events	Do not contact property owners	Trees on private residencies may impact power during severe weather and severe winter weather events	
Action	Evaluation										
No Action	Current problem exists										
Do not contact utility companies	Trees along utility lines may impact power during severe weather and severe winter weather events										
Do not contact property owners	Trees on private residencies may impact power during severe weather and severe winter weather events										

Action 2025-ConewangoT-12. Generators at Critical Facilities

Lead Agency:	Engineering										
Supporting Agencies:	Town Board										
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Town Hall and the Highway Facility do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.										
Description of the Solution:	The Town Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Town will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of critical facilities that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>-</td></tr><tr><td>Microgrid</td><td>Costly and difficult to implement.</td></tr><tr><td>Solar panels and battery backup</td><td>Solar power is unlikely to be able to provide battery power for extended power failure events.</td></tr></tbody></table>		Action	Evaluation	No Action	-	Microgrid	Costly and difficult to implement. No Action	-										
Microgrid	Costly and difficult to implement.										
Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.										

Action 2025-ConewangoT-13. Property Flood Mitigation

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Properties in the Town have been subject to flooding impacts. Morey Street has a property which experiences damages during substantial periods of heavy rain, but other properties may be impacted by flooding as well.		
Description of the Solution:	The Town will conduct outreach to the impacted properties and will provide information on mitigation alternatives. After preferred mitigation measures are identified, the Town will collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/purchase/moving/elevating of the affected properties that experience frequent flooding. The parameters for this initiative would be funding, benefits versus cost, and willing participation of property owners.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA FMA, FMA SWIFT, Town Budget, County Budget, Property Owners		
Implementation Timeline:	3 years		
Goals Met:	1		
Benefits:	This action would foster comprehensive floodplain management by removing at risk properties from the flood hazard area or elevating properties to reduce the flood risk.		
Impact on Socially Vulnerable Populations:	Collecting data regarding homeowners that reside within flood prone areas provides an opportunity to introduce location-specific opportunities for assistance. Socially vulnerable populations may be able to have houses elevated or acquired when it would otherwise be unaffordable.		
Impact on Future Development:	Increased outreach to homeowners within a flood prone area will limit construction in areas that are prone to hazard events. Homes may be acquired, which will remove those structures from the floodplain and prevent future development on those sites.		
Impact on Critical Facilities/Lifelines:	Removing structures from the floodplain decreases the demand on utilities and emergency services including health and medical, law enforcement, and search and rescue.		
Impact on Capabilities:	Outreach which promotes the removal of risk from the immediate floodplain via acquisition of properties will free up resources for search and rescue and other emergency operations as needed. This action will enhance the Town's current NFIP capabilities.		
Climate Change Considerations:	Climate change is likely to increase the frequency and severity of severe rainfall, flash flooding, riverine flooding, and coastal flooding from sea level rise and storm surge events. Removing structures from the floodplain will reduce the response and recovery costs as a result of these events and decrease the loss of human life as a result of these events. Elevating structures will reduce the recovery costs.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Levee around floodplain		Costly, not enough room.
	Deployable flood barriers		Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.

Action 2025-ConewangoT-14. Bridge Evaluations

Lead Agency:	Highway Department								
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT								
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire								
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none"> • Conewango 01 • Conewango 02 • Conewango 05 • Conewango 07 • Conewango 08 • Conewango 14 • Conewango 20 • Conewango 29 • Conewango 31 								
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.								
Estimated Cost:	Medium								
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY								
Implementation Timeline:	Within 5 years								
Goals Met:	1								
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.								
Impact on Socially Vulnerable Populations:	Not applicable								
Impact on Future Development:	Not applicable								
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.								
Impact on Capabilities:	Not applicable								
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.								
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)								
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)								
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Remove bridges</td> <td>May cause significant traffic problems</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Remove bridges	May cause significant traffic problems
Action	Evaluation								
No Action	Current problem exists								
Remove bridges	May cause significant traffic problems								

	Replace bridges	Cost prohibitive
--	-----------------	------------------

DRAFT

10. TOWN OF DAYTON

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Dayton with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Dayton, describes who participated in the planning process, assesses Dayton's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

10.1 HAZARD MITIGATION PLANNING TEAM

The Town of Dayton identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Town Supervisor represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 10-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 10-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Aaron Huber, Supervisor Address: 9100 Route 62, South Dayton NY 14138 Phone Number: (716) 532-3758 Email: dayton_supervisor@yahoo.com	Name/Title: Chris Rupp, Deputy Supervisor Address: 9100 Route 62, South Dayton NY 14138 Phone Number: (716) 532-3758 Email: crupp14138@yahoo.com
<i>National Flood Insurance Program Floodplain Administrator</i>	
Name/Title: Jeff Holler, Code Enforcement Officer Address: 9100 Route 62, South Dayton NY 14138 Phone Number: (716) 307-3069 Email: eastottoceo@gmail.com	

10.2 COMMUNITY PROFILE

The Town of Dayton lies in the northwest corner of Cattaraugus County in western New York State and has a total area of 36.25 square miles. The northeast corner of the town is a watershed and small streams on the north run into the Cattaraugus Creek, then the St. Lawrence River. In the southern portion of the town, they run through the Conewango Creek which drains to the Allegany River. The town is bordered to the north by the Town of Perrysburg, to the east is the Town of Persia, to the south is the Town of Leon, and to the west is Chautauqua County.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 4 percent of the

population is 5 years of age or younger, 28.6 percent is 65 years of age or older, 0 percent is non-English speaking, 12.5 percent is below the poverty threshold, and 16 percent is considered disabled.

10.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Dayton performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Dayton to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

10.3.1 Planning and Regulatory Capability and Integration

Table 10-2 summarizes the planning and regulatory tools that are available to Dayton.

Table 10-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Chapter 75, Building Construction and Fire Prevention	State and Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? Code applies to construction, alteration, enlargement, replacement, repair, equipment, use and occupancy, location, maintenance, removal and demolition of every building or structure or any appurtenances connected or attached to such buildings or structures.				
Zoning/Land Use Code	Yes	Chapter 180, Zoning	Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? Promote and protect, to the fullest extent practicable, the environment of the Town and the public health, safety, and general welfare of the people. To accomplish this intent, in accordance with the Town's Comprehensive Plan, the Town Board finds it necessary and advisable to divide the area of the Town into districts or zones, and to regulate the following elements of land use and development				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Subdivision Code	Yes	Chapter 180, Zoning	Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? Provides for the future growth and development of the Town and for the purpose of affording adequate facilities for the housing, transportation, distribution, comfort, convenience, safety, health and welfare of its population.				
Site Plan Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to “caveat emptor,” a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.				
Growth Management	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Environmental Protection Ordinance(s)	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Flood Damage Prevention Ordinance	Yes	April 14, 1987 (Amended in 1989) Local Law #1-1989	Federal, State, County and Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? Promotes public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas. A. Regulate uses which are dangerous to health, safety and property due to water or erosion hazards or which result in damaging increases in erosion or in flood heights or velocities. B. Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction. C. Control the alteration of natural floodplains, stream channels and natural protective barriers which are involved in the accommodation of floodwaters. D. Control filling, grading, dredging and other development which may increase erosion or flood damages. E. Regulate the construction of flood barriers which will unnaturally divert floodwaters, or which may increase flood hazards to other lands. F. Qualify for and maintain participation in the National Flood Insurance Program.				
Wellhead Protection	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency

RESPONSE/RECOVERY PLANNING				
Comprehensive Emergency Management Plan How has or will this be integrated with the HMP and how does this reduce risk? The Comprehensive Emergency Management Plan defines the scope of preparedness and emergency management activities necessary in the County. This document assigns responsibility to organizations and individuals for carrying out specific actions that exceed routine responsibility at projected times and places during an emergency; sets lines of authority and organizational relationships and shows how all actions will be coordinated; identifies how people and property are protected; and identifies personnel, equipment, facilities, supplies, and other resources available within the jurisdiction or by agreement with other jurisdictions.	Yes	Comprehensive Emergency Management Plan June 10, 2020	Local	Emergency Manager
Continuity of Operations Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-
Substantial Damage Response Plan How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Threat and Hazard Identification and Risk Assessment	Yes	Local THIRA	Local	Emergency Manager
How has or will this be integrated with the HMP and how does this reduce risk? The Threat and Hazard Identification and Risk Assessment (THIRA) is a three-step risk assessment process that helps the Town understand its risks to natural, technological, and human-caused hazards and what must be done to address those risks.				
Post-Disaster Recovery Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Public Health Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Other	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

10.3.2 Development and Permitting Capability

Table 10-3 summarizes the capabilities of Dayton to oversee and track development.

Table 10-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?		
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	Yes	Zoning
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	CEO
Do you have a buildable land inventory?	No	-
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 		
Describe the level of buildout in your jurisdiction.	N/A	There is land available to build.

10.3.3 Administrative and Technical Capability

Table 10-4 summarizes potential staff and personnel resources available to Dayton and their current responsibilities that contribute to hazard mitigation.

Table 10-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	Planning Board
Zoning Board of Adjustment	Yes	Zoning Board of Adjustment
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	Highway Department
Construction/Building/Code Enforcement Department	Yes	Code Enforcement Officer
Emergency Management/Public Safety Department	Yes	Emergency Manager
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	No	-
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	Yes	CEO and Highway Department
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	Yes	Safety Officer (CEO)

10.3.4 Fiscal Capability

Table 10-5 summarizes financial resources available to Dayton.

Table 10-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	No
Impact fees for homebuyers or developers of new development/homes	No
Stormwater utility fee	No
Incur debt through general obligation bonds	No
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	No
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

10.3.5 Education and Outreach Capability

Table 10-6 summarizes the education and outreach resources available to Dayton.

Table 10-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Town Supervisor
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-

Outreach Resources	Available? (Yes/No)	Comment
Warning systems for hazard events	Yes	Code Red telephone alerting and text system
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	Yes	Town website

10.3.6 Community Classifications

Table 10-7 summarizes classifications for community programs available to Dayton.

Table 10-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

10.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 10-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 10-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Weak

10.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 10-1 is responsible for maintaining this information.

10.4.1 NFIP Statistics

Table 10-9 summarizes the NFIP policy and claim statistics for Dayton.

Table 10-9. Dayton NFIP Summary of Policy and Claim Statistics

# Policies	3
# Claims (Losses)	1
Total Loss Payments	\$0.00
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

10.4.2 Flood Vulnerability Summary

Table 10-10 provides a summary of the NFIP program in Dayton.

Table 10-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Wolf Road, Mill Street, Oak Street, Frog Valley, Route 322 coming out of South Dayton; areas impacted by Thatcher Brook.
Do you maintain a list of properties that have been damaged by flooding?	The Town does not maintain a list.
Do you maintain a list of property owners interested in flood mitigation?	The Town does not maintain a list. The Town needs to do outreach for property owners interested in mitigation.
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Unknown
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	No procedures are developed
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	Unknown
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	No, Maps are dated and do not reflect localized flooding areas.
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS department.
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	Yes, training is needed
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	GIS, permit review, inspections
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Procedures need to be developed
What are the barriers to running an effective NFIP program in the community, if any?	Staffing, funding and training
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: March 27, 2012 CAV: February 23, 2001

NFIP Topic	Comments
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law #1-1989
What is the date that your flood damage prevention ordinance was last amended?	Amended in 1989
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Zoning Board considers flooding issues in their meetings.
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	Not at this time.

10.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 10-11 through Table 10-13.

Table 10-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	2	0	0	2
Permits within SFHA	0	0	0	0
2021				
Total Permits	1	0	0	1
Permits within SFHA	0	0	0	0
2022				
Total Permits	-	-	-	-
Permits within SFHA	-	-	-	-
2023				
Total Permits	-	-	-	-
Permits within SFHA	-	-	-	-
2024				
Total Permits	-	-	-	-
Permits within SFHA	-	-	-	-

SFHA = Special Flood Hazard Area (1% flood event)

Note: No building permit records were available for 2022, 2023, and 2024

Table 10-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
The Town did not indicate any recent major development or infrastructure occurred between 2019 to present.					

* Only location-specific hazard zones or vulnerabilities identified.

Table 10-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
The Town did not indicate any known or anticipated major development or infrastructure in the next five years.					

10.6 JURISDICTIONAL RISK ASSESSMENT

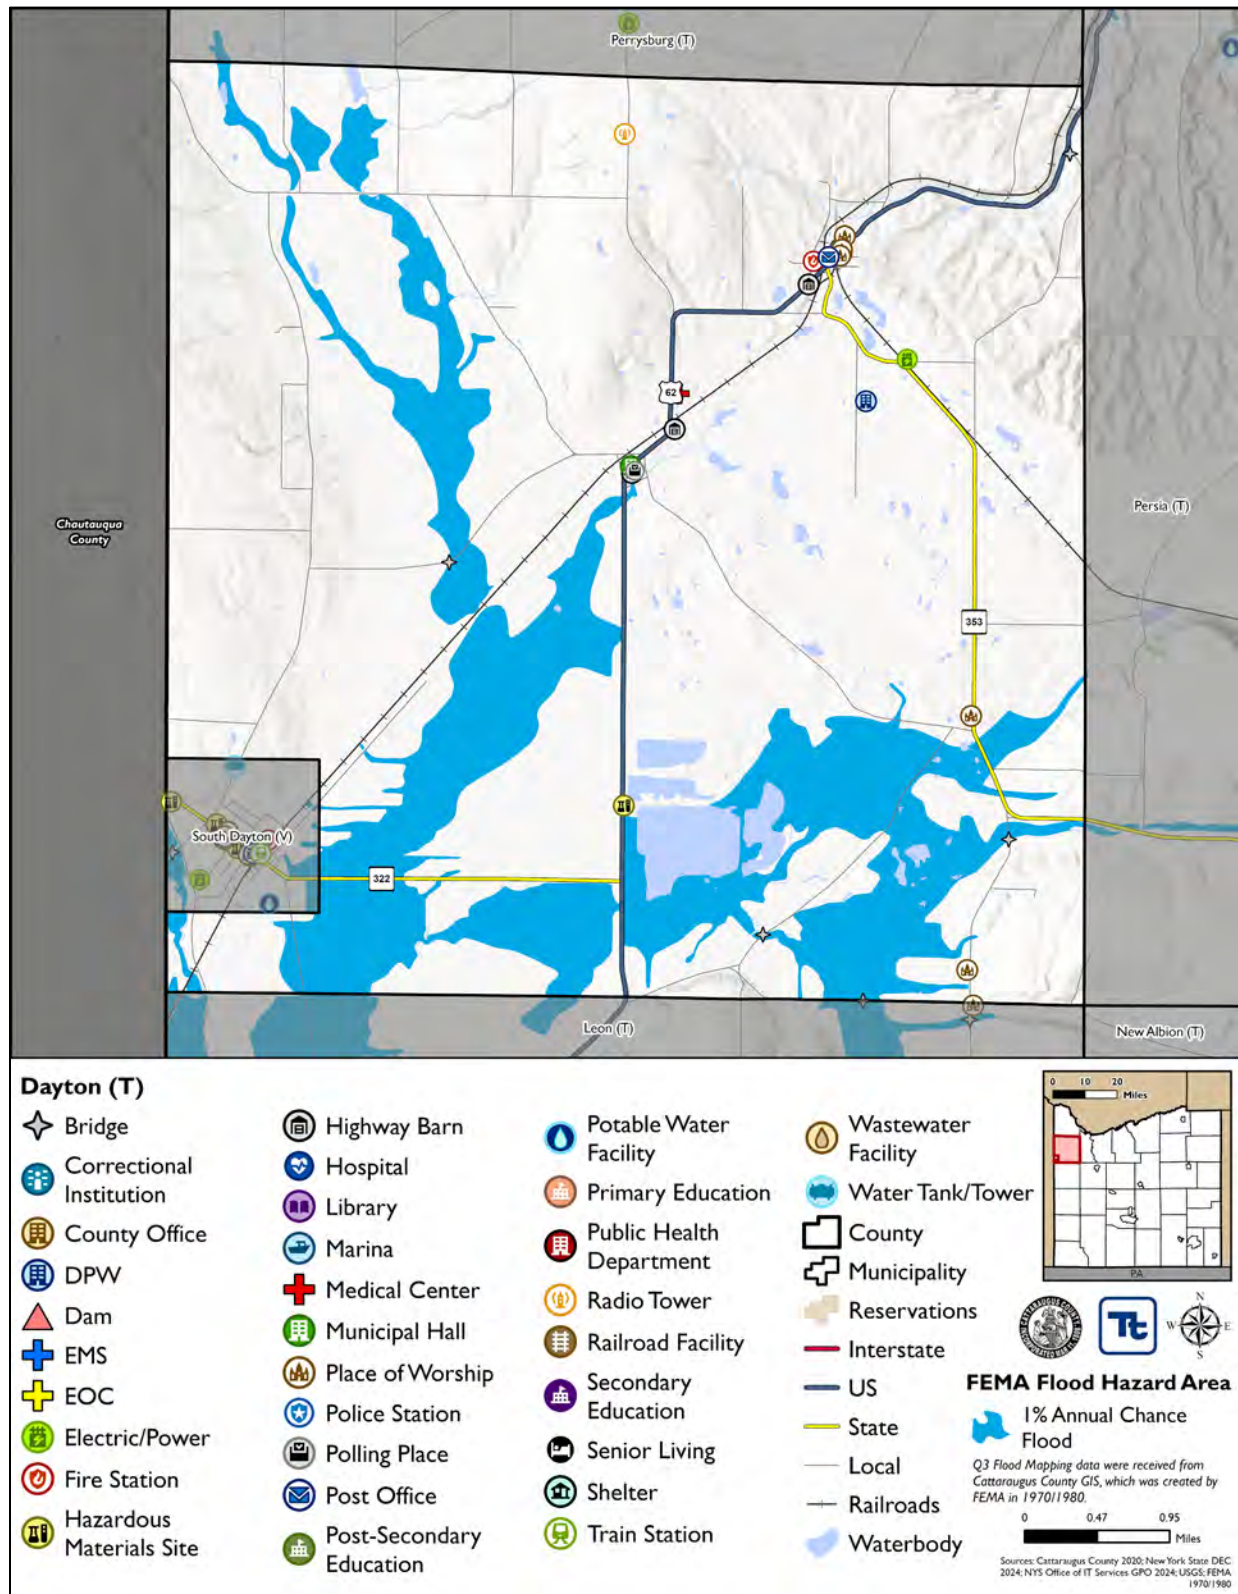

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Dayton's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

10.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 10-1 through Figure 10-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Dayton has significant exposure. The maps show the location of potential new development, where available.

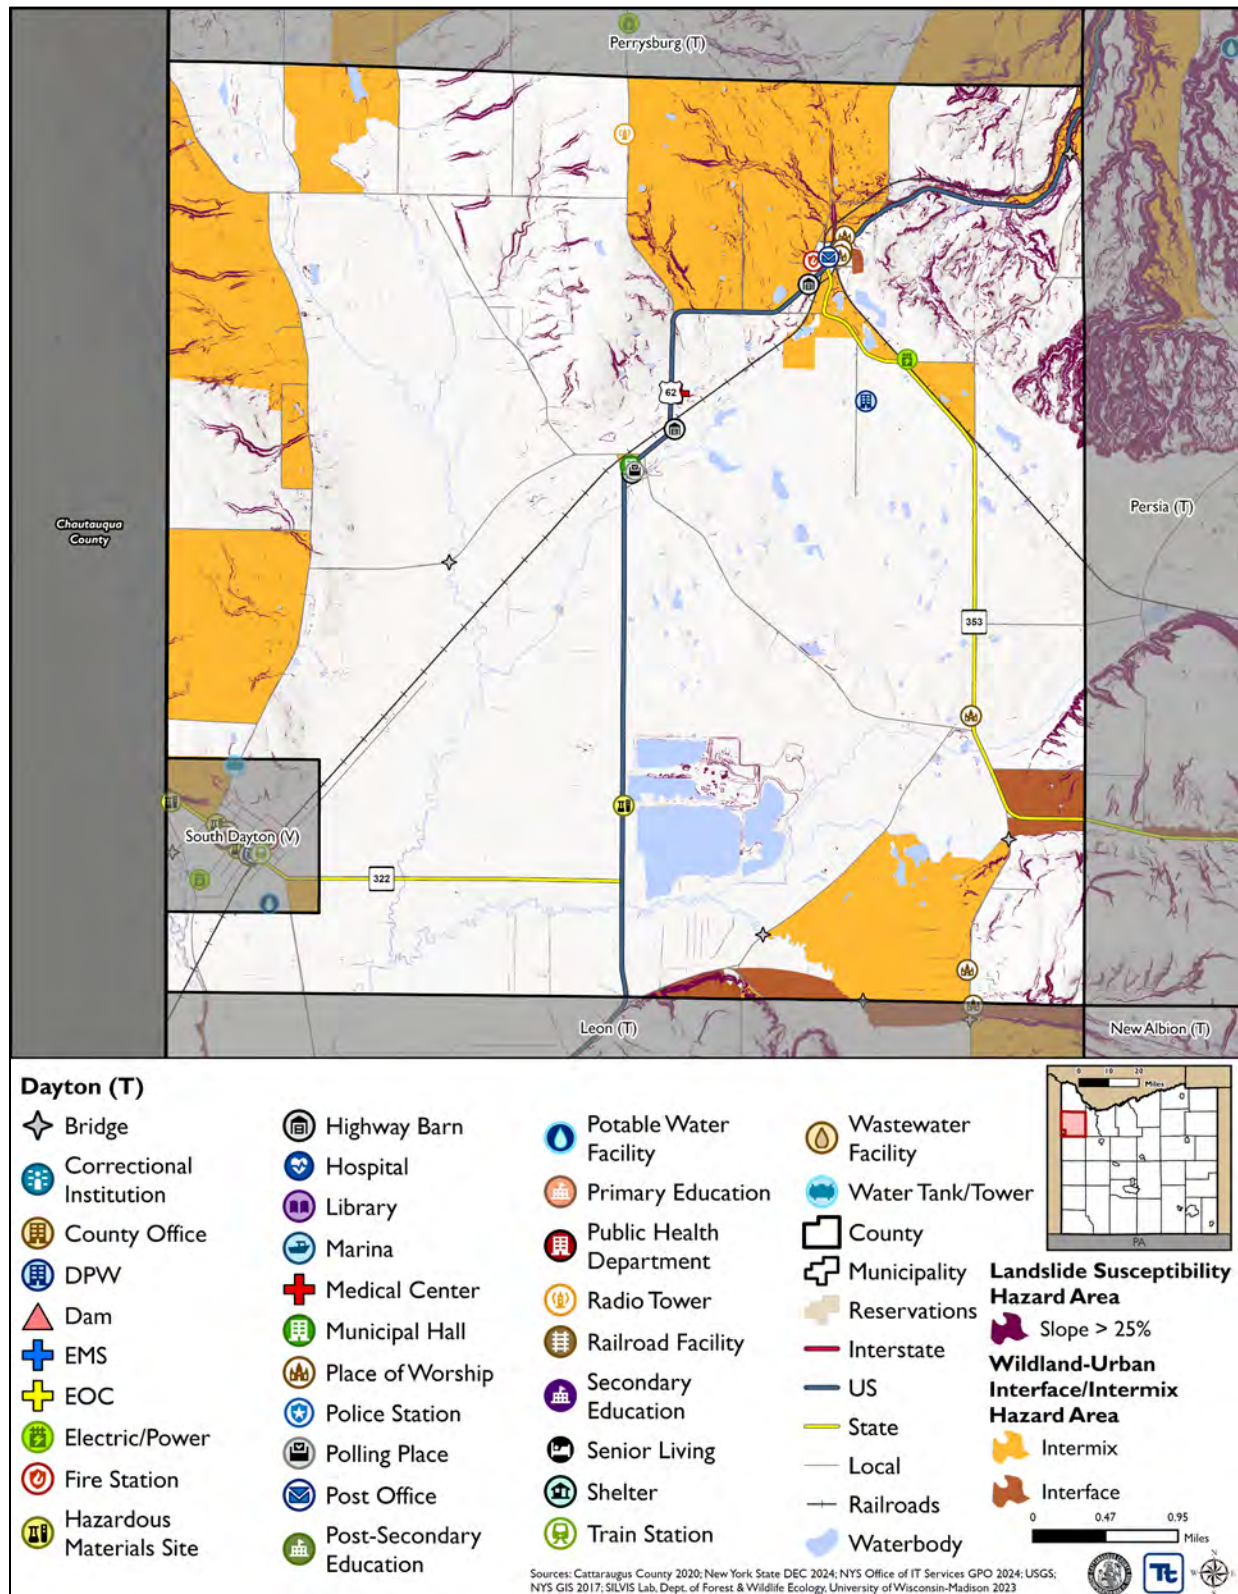

Figure 10-1. Dayton Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 10-2. Dayton Landslide and Wildfire Hazard Area Extent and Location Map

10.6.2 Hazard Event History

The history of natural and non-natural hazard events in Dayton is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 10-14 provides details on loss and damage in Dayton during hazard events since the last hazard mitigation plan update.

Table 10-14. Hazard Event History in Dayton

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Dayton
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	There are no records of damages or losses in the Town. The Town needs to keep record of damage and losses from events.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town abided by mask mandates, work from home and social distancing.
January 12, 2020	High Wind	N/A	High wind	There are no records of damages or losses in the Town
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	There are no records of damages or losses in the Town
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	There are no records of damages or losses in the Town
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	There are no records of damages or losses in the Town
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	There are no records of damages or losses in the Town
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	There are no records of damages or losses in the Town
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	There are no records of damages or losses in the Town
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	There are no records of damages or losses in the Town
March 6, 2022	High Wind	N/A	High wind	There are no records of damages or losses in the Town
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	There are no records of damages or losses in the Town

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Dayton
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	There are no records of damages or losses in the Town
December 2022	High Wind	No	Blizzard in the State brought high wind events.	Trees and utilities, such as power lines were knocked down and residents were left without power.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

10.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Dayton .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Dayton reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town indicated the following:

- The Town increased its risk to the Flood hazard from 'Low' to 'Medium' due to occurrences of localized flooding outside of FEMA defined flood areas.

Table 10-15 shows Dayton's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 10-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Medium
Flood	Medium
Landslide	Medium
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Low

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 10-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 10-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Country Side Sand & Gravel - South Dayton	Hazardous Materials Site	X	-	2025-DaytonT-01	-
Dayton 03	Bridge	X	-	2025-DaytonT-15	-
Dayton 08	Bridge	X	-	2025-DaytonT-15	-
Dayton 21	Bridge	X	-	2025-DaytonT-15	-
Dayton Town Hall	Polling Place	X	-	2025-DaytonT-01	-
Dayton Highway Barn	Highway Barn	X	-	2025-DaytonT-01	-

Source: Cattaraugus County 2024

10.6.4 Identified Issues

After a review of Dayton's hazard event history, hazard rankings, hazard location, and current capabilities, Dayton identified the following vulnerabilities within the community:

- Critical facilities need to be protected to the 500-year flood level. There are three facilities located in the Town identified to be in the flood hazard area:
 - Dayton Town Hall
 - Dayton Highway Barn
 - Country Side Sand and Gravel in South Dayton
- Scour on School Street Bridge has developed due to the removal of sediment for erosion. This erosion may have occurred due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may have caused flooding conditions to further erode the structure of the bridge. The bridge should be evaluated to determine useability.
- Roads in the Town have been eroded due to floodwaters stemming from severe storms and melted snow from severe winter storms. Eroded roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Several roads in the Town would benefit from mitigation measures to prevent future damage from flooding, including:
 - Merrill Drive
 - VanEtten Road
 - Meyers Corner Road

- Kellogg Hill Road
- Thatcher Brook, which spans several local jurisdictions, has stream bank erosion issues. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding.
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:
 - Wolf Road
 - Mill Street
 - Oak Street
 - Frog Valley
 - Route 322 coming out of South Dayton
- Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Culverts in the Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters including culverts located on the following roads:
 - Merrill Drive
 - School Street
 - James Road
 - Wolf Road
 - Bentley Road
 - Cabic Road
 - Oak Street
 - Frog Valley Road
 - 42nd Street
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and

functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.

- The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The Town is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.
- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The Town does not have an inventory of roads which may be impacted by landslides, nor is there a local law restricting construction on areas with steep slopes.
- The Town has six low-hazard dams within its jurisdiction. Despite their low hazard, these structures have the potential to impact the people, property, infrastructure, and environment nearby.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Dayton 03
 - Dayton 08
 - Dayton 21

10.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

10.7.1 Past Mitigation Action Status

Table 10-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

10.7.2 Additional Mitigation Efforts

Dayton did not identify any additional mitigation efforts completed since the last HMP.

Table 10-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Dayton-001	VanEtten Road slide	County Highway & Town Highway	Landslide	Problem: VanEtten Road slide erosion issues need to be addressed. Solution: Pending engineer study, stabilize slides on VanEtten Road.	1. Include 2. Thatcher Brook Watershed (where the road is located) Task Force - made up of various impacted municipalities and local leaders started to meet	1. Include 2. Not applicable 3.
2020-Dayton-002	Culvert upgrade & sluice replacement at various locations	Town Highway	Flood	Problem: Sluice and culvert pipes need upgrading or replacing at various locations. Solution: Determine the appropriate size for stormwater management infrastructure in the town and implement upgrades as appropriate.	1. In Progress 2. Issues on: Merrill Drive, water over road. School street bridge; James Road; two locations on Wolf Road; Bentley Road, Cabc Road, Oak Street, Frog Valley Road	1. Include 2. Update action to include locations 3. Not applicable
2020-Dayton-003	Evaluate areas that need a flood warning system constructed.	County OES	Flood	Problem: Flash flooding, limited time; flood gauging is necessary for adequate warning. Solution: Evaluate areas that need a flood warning system and construct accordingly.	1. Complete 2. Red Alert	1. Discontinue 2. Not applicable 3. Project complete
2020-Dayton-004	Continue to support Flood Risk management Feasibility Study in the Village of Gowanda, and Towns of Perrysburg, Persia, and Dayton, as	County OES & Town Board	Flood	Problem: Flood risk management feasibility study requires continuous support. Solution: Conduct feasibility study and complete projects in these municipalities that will improve flood management.	1. No Progress 2. Not relevant to Town	1. Discontinue 2. Not applicable 3. Not relevant to Town

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
	well as Erie County and the Town of Collins					
2020-Dayton-005	Training for Code Enforcement Officer/ Floodplain Administrator	County DPW, Town Board	Flood	Problem: Floodplain managers require training about their required duties. Solution: Obtain/host specialist training and certification for floodplain managers.	1. In Progress 2. Lack of funding	1. Include 2. Not applicable 3. Not applicable
2020-Dayton-006	Update the Flood Damage Prevention Ordinance	Town board, FPA	Flood	Problem: The Flood Damage Prevention Ordinance does not include the 2' freeboard requirement mandated by NYS. Solution: The Flood Damage Prevention Ordinance will be updated to include the 2' freeboard requirement mandated by NYS.	1. No Progress 2. Other Town priorities took precedence	1. Include 2. Not applicable 3. Not applicable
2020-Dayton-007	Continuous Public Education	Town Board, County OES	Wildfire	Problem: Public needs to be educated on what they can do to protect their structures from wildfires. Solution: Provide information to residents, business owners, and organizations about what they can do to protect their structures from wildfires.	1. In Progress 2. Working with county	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Dayton-008	Update municipal Emergency Operations Plan	Town Board and Town Highway Department	All	Problem: The municipal Emergency Management Plan may be outdated. Solution: Evaluate EOP to determine if an update is needed. As needed update the Plan.	1. No Progress 2. Other Town priorities took precedence	1. Include 2. Not applicable 3. Not applicable
2020-Dayton-009	Replacement of sluice or culvert at James Road, Jolls Road, 42nd Street and Wolf Road	Town Highway Department	Flood, storm	Problem: Sluices and culverts are too small to hand stormwater flows at James Road, 42nd Street and Wolf Road. Solution: Pending engineer study, replace sluices and culverts with larger units.	1. In Progress 2. James and Wolf are still an issue (check on other two)	1. Include 2. Combine with 2020-Dayton-002 3. Not applicable
2020-Dayton-010	Elevate Wolf Road	Town Highway Department	Flood	Problem: Wolf Road floods during large rain events Solution: Pending engineer study, elevate the roadway so that the road does not flood	1. Include 2. Revise to be flood mitigation, not elevation	1. Include 2. Revise to be flood mitigation, not elevation 3. Not applicable
2020-Dayton-011	Town of Dayton Highway Barn	Town Highway Department	Flood	Problem: The Town Highway Barn is located in the 1% floodplain. Solution: Conduct an engineering study of location and construction options and then construct a Highway Barn to a location above the floodplain.	1. No Progress 2. Was not a Town priority	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Dayton-012	Country Side Sand & Gravel - South Dayton	Facility owner	Flood	<p>Problem: This facility is located in a 1% floodplain</p> <p>Solution: Investigate alternatives to protect the facility from flooding, Implement upgrades as feasible.</p>	<p>1. No Progress</p> <p>2. Not relevant to the Town.</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. Not relevant to the Town.</p>

10.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Dayton participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 "Selecting Appropriate Mitigation Measures for Floodprone Structures" (March 2007)
- FEMA "Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards" (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Dayton would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 10-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 10-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 10-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X									X
Flood	X	X	X	X	X		X	X	X	X
Landslide	X				X					X
Pandemic	X			X			X			X
Severe Storm	X		X		X			X	X	X
Severe Winter Storm	X		X		X			X	X	X
Utility Failure	X								X	X
Wildfire	X			X			X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 10-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-DaytonT-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-DaytonT-02	School Street Bridge Evaluation	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High
2025-DaytonT-03	Roadway Erosion	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-DaytonT-04	Thatcher Brook Erosion	1	1	1	1	0	0	1	1	1	1	1	1	0	1	11	High
2025-DaytonT-05	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-DaytonT-06	Undersized Culverts	1	1	1	1	1	0	1	0	1	1	1	1	1	0	11	High
2025-DaytonT-07	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-DaytonT-08	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-DaytonT-09	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-DaytonT-10	Comprehensive Emergency Management Plan Update	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-DaytonT-11	Substantial Damage Management Plan	1	1	1	1	1	1	1	1	1	1	1	1	1	0	13	High
2025-DaytonT-12	Pandemic Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-DaytonT-13	Steep Slope Ordinance	1	1	1	1	1	1	1	0	1	0	1	1	0	0	10	Medium
2025-DaytonT-14	Dam Owner Partnership	1	1	1	1	1	1	0	1	1	0	1	1	1	0	11	High
2025-DaytonT-15	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-DaytonT-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	<p>Critical facilities need to be protected to the 500-year flood level. There are three facilities located in the Town identified to be in the flood hazard area:</p> <ul style="list-style-type: none">• Dayton Town Hall• Dayton Highway Barn• Country Side Sand and Gravel in South Dayton		
Description of the Solution:	<p>The Town will notify the critical facility owners and managers of the facility's location in the flood hazard area. The Town will encourage each facility conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the facility owner or manager will carry out the option.</p>		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget		
Implementation Timeline:	Within 5 Years		
Goals Met:	1, 3, 5		
Benefits:	Ensures continuity of operations of several critical facilities in the Town.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.		
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.		
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.		
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.		
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Relocate facility		Relocation is expensive and results in loss or delay of critical services in the immediate area

Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events

Reduction in response times and delay of critical services in the immediate area.

DRAFT

Action 2025-DaytonT-02. School Street Bridge Evaluation

Lead Agency:	Engineering		
Supporting Agencies:	Highway Department, Cattaraugus County Public Works, NYS DOT		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Scour on School Street Bridge has developed due to the removal of sediment for erosion. This erosion may have occurred due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may have caused flooding conditions to further erode the structure of the bridge. The bridge should be evaluated to determine useability.		
Description of the Solution:	The Engineer will evaluate the School Street Bridge to determine its current usability. The evaluation will indicate whether it may be to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from Cattaraugus County Public Works and NYS DOT.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will ensure the School Street Bridge is structurally sound to continue in operation.		
Impact on Socially Vulnerable Populations:	Not applicable		
Impact on Future Development:	Not applicable		
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridge provides a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridge.		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the bridge structure is impervious to erosion at its base due to rising water levels.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)		<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)		<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove bridge		May cause significant traffic problems
	Replace bridge		Cost prohibitive

Action 2025-DaytonT-03. Roadway Erosion

Lead Agency:	Highway Department								
Supporting Agencies:	Code Enforcement, Engineering								
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire							
Description of the Problem:	Roads in the Town have been eroded due to floodwaters stemming from severe storms and melted snow from severe winter storms. Eroded roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Several roads in the Town would benefit from mitigation measures to prevent future damage from flooding, including: <ul style="list-style-type: none">• Merrill Drive• VanEtten Road• Meyers Corner Road• Kellogg Hill Road								
Description of the Solution:	The Town Engineer and Highway Department will identify and implement erosion-reducing measures. These measures may include: <ul style="list-style-type: none">• Elevating the roadway• Improving drainage• Strengthening underlying soils• Realigning roads and structures• Strengthening support structures• Armoring vulnerable embankments								
Estimated Cost:	High								
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS								
Implementation Timeline:	Within 5 years								
Goals Met:	1								
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.								
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along eroded and flood-prone roads.								
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.								
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.								
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.								
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. This action will mitigate erosion along roadways and reduce likelihood of flooding impacts.								
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)							
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)

Action	Evaluation								
No Action	Current problem exists								
Remove ditches from roadways	Would likely increase flood risk								

Pave all roads with permeable surfaces

Cost prohibitive

DRAFT

Action 2025-DaytonT-04. Thatcher Brook Erosion

Lead Agency:	Town Board										
Supporting Agencies:	Village of Gowanda, Town of Perrysburg, Town of Persia, Thatcher Brook Task Force										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The area surrounding Thatcher Brook is prone to flooding, impacting nearby roads and properties. Thatcher Brook has bank erosion issues, threatening encroachment onto nearby roads. Banks become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding. Additional flood mitigation measures may also be considered.										
Description of the Solution:	The Town Board will work with surrounding impacted jurisdictions, including the Village of Gowanda and the Towns of Perrysburg and Persia, to assess the feasibility and cost-effectiveness of various stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements to prevent future flooding surrounding Thatcher Brook.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, Town Budget, NYS DEC, Village of Gowanda, Town of Perrysburg, Town of Persia										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2										
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage to properties.										
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.										
Impact on Future Development:	Future development surrounding Thatcher Brook will have its risk of flood impacts reduced.										
Impact on Critical Facilities/Lifelines:	Critical facilities and community lifelines near Thatcher Brook would have a reduced risk to the flood hazard.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. These events can lead to an influx of water, resulting in flooding conditions.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input checked="" type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input checked="" type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Elevate nearby roads</td><td>Cost prohibitive</td></tr><tr><td>Acquire all properties which flood</td><td>Cost prohibitive</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Elevate nearby roads	Cost prohibitive	Acquire all properties which flood	Cost prohibitive		
Action	Evaluation										
No Action	Current problem exists										
Elevate nearby roads	Cost prohibitive										
Acquire all properties which flood	Cost prohibitive										

Action 2025-DaytonT-05. Floodprone Roads

Lead Agency:	Highway Department										
Supporting Agencies:	Code Enforcement, Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including: <ul style="list-style-type: none"> • Wolf Road • Mill Street • Oak Street • Frog Valley • Route 322 coming out of South Dayton 										
Description of the Solution:	The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include: <ul style="list-style-type: none"> • Elevation of roadways • Installation or improvement of drainage systems • Regrading of roadway and soils • Resurfacing or reshaping roadways 										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th><th>Evaluation</th></tr> </thead> <tbody> <tr> <td>No Action</td><td>Current problem exists</td></tr> <tr> <td>Relocate all flood-prone road system</td><td>Not feasible</td></tr> <tr> <td>Raise all flood prone roads</td><td>Cost prohibitive</td></tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Relocate all flood-prone road system	Not feasible	Raise all flood prone roads	Cost prohibitive
Action	Evaluation										
No Action	Current problem exists										
Relocate all flood-prone road system	Not feasible										
Raise all flood prone roads	Cost prohibitive										

Action 2025-DaytonT-06. Undersized Culverts

Lead Agency:	Engineering		
Supporting Agencies:	Code Enforcement, Highway Department		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	<p>Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters including culverts located on the following roads:</p> <ul style="list-style-type: none">• Merrill Drive• School Street• James Road• Wolf Road• Bentley Road• Cabic Road• Oak Street• Frog Valley Road• 42nd Street		
Description of the Solution:	The Town Engineer will complete an engineering survey of the culverts that are undersized and contribute to flooding to determine the proper size necessary to provide stormwater capacity. The Town Highway Department will complete the necessary upsizing for the culverts.		
Estimated Cost:	TBD after study is complete		
Potential Funding Sources:	FEMA HMA, CHIPS, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.		
Impact on Capabilities:	Identifying the culverts that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes culvert sizes to meet changing stormwater needs as the result of climate change.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)		<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)		<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action	Evaluation	
	No Action	Current problem exists	
	Remove roadway	Roadway cannot be removed	

	Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.
--	-------------	--

DRAFT

Action 2025-DaytonT-07. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.		
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-DaytonT-08. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-DaytonT-09. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Town</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance

Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-DaytonT-10. Comprehensive Emergency Management Plan Update

Lead Agency:	Town Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Town will update the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Town will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Town will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Town to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Town performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Town CEMP will remain undeveloped</td> </tr> </tbody> </table>		Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped	
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped										

Action 2025-DaytonT-11. Substantial Damage Management Plan

Lead Agency:	Highway Department										
Supporting Agencies:	Code Enforcement, Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Officials in NFIP-participating communities are responsible for regulating all development in SFHAs by issuing permits and enforcing local floodplain requirements, including Substantial Damage, for the repairs of damaged buildings. After any disaster event, they must:</p> <ul style="list-style-type: none">• Determine where the damage occurred within the community and if the damaged structures are in an SFHA.• Determine what to use for "market value" and cost to repair; uniformly applying regulations will protect against liability and promote equitable administration.• Determine if repairing plus improving the damaged structure equals or exceeds 50% of the structure's pre-damage value.• Require permits for floodplain development. <p>The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The municipality is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.</p>										
Description of the Solution:	The Town will develop a Substantial Damage Management Plan, following the six-step planning process in 2021 Developing a Substantial Damage Management Plan (https://crsresources.org/files/500/developing_subst_damage_mgmt_plan.pdf). This plan will outline responsibilities for Substantial Damage determinations, determining market value, and permit approval processes following a disaster event.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will provide a guidance document to determine substantial damage in the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may disproportionately be impacted by substantial damages.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	This action will produce substantial damage guidance for Town officials to use.										
Climate Change Considerations:	Climate change is leading to an increase in frequency and intensity of precipitation events, which also increases flooding and may lead to a main failure.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources following disaster events</td><td>Resources may not be available during major widespread events</td></tr><tr><td>Establish MOUs with outside agencies to conduct Substantial Damage Determinations</td><td>A plan outlining responsibility is still necessary to prevent missing important requirements</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources following disaster events	Resources may not be available during major widespread events	Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources following disaster events	Resources may not be available during major widespread events										
Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements										

Action 2025-DaytonT-12. Pandemic Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-DaytonT-13. Steep Slope Ordinance

Lead Agency:	Code Enforcement										
Supporting Agencies:	Engineering, Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The Town does not have an inventory of roads which may be impacted by landslides, nor is there a local law restricting construction on areas with steep slopes.										
Description of the Solution:	The Town Engineer will complete an assessment to identify roads in Town which have slopes at grades greater than 20 percent. Once identified, Code Enforcement will work with Engineering and the Town Board to develop a local law restricting future development in these identified hazard areas.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, Town Budget										
Implementation Timeline:	3 years										
Goals Met:	1, 4, 6										
Benefits:	This action will identify locations with steep grades (above 20 percent) and lead to the adoption of a local law to restrict future development in these hazard areas. Furthermore, the identification of the locations with the steep grades will provide the Highway Department and Engineer with future locations to implement mitigation measures to protect any nearby property and infrastructure.										
Impact on Socially Vulnerable Populations:	This action may identify socially vulnerable populations whose properties may be at risk to the landslide hazard. If identified, the Town may educate the populations on how to mitigate potential risks.										
Impact on Future Development:	Future development will be restricted in locations with identified steep slopes.										
Impact on Critical Facilities/Lifelines:	This action has the potential to identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's regulatory capabilities.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Restrict development on slopes greater than 5 percent grade</td><td>May be too restrictive and discourage any future development</td></tr><tr><td>Create inventory but do not develop local law</td><td>Would not restrict future development, could increase at risk properties and structures</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Restrict development on slopes greater than 5 percent grade	May be too restrictive and discourage any future development	Create inventory but do not develop local law	Would not restrict future development, could increase at risk properties and structures		
Action	Evaluation										
No Action	Current problem exists										
Restrict development on slopes greater than 5 percent grade	May be too restrictive and discourage any future development										
Create inventory but do not develop local law	Would not restrict future development, could increase at risk properties and structures										

Action 2025-DaytonT-14. Dam Owner Partnership

Lead Agency:	Town Board										
Supporting Agencies:	NYS DEC, Dam Owners										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Town has six low-hazard dams within its jurisdiction. Despite their low hazard, these structures have the potential to impact the people, property, infrastructure, and environment nearby.										
Description of the Solution:	The Town will work with the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3										
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within for those living near areas where the dams are located.										
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Town will be unaware of any safety concerns for the dam or its condition</td> </tr> <tr> <td>Utilize information from NYS DEC</td> <td>Owners may not be required to submit a safety plan to the State</td> </tr> <tr> <td>Utilize information from the National Inventory of Dams</td> <td>Not all dams are listed on the inventory</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Town will be unaware of any safety concerns for the dam or its condition	Utilize information from NYS DEC	Owners may not be required to submit a safety plan to the State	Utilize information from the National Inventory of Dams	Not all dams are listed on the inventory		
Action	Evaluation										
No Action	Town will be unaware of any safety concerns for the dam or its condition										
Utilize information from NYS DEC	Owners may not be required to submit a safety plan to the State										
Utilize information from the National Inventory of Dams	Not all dams are listed on the inventory										

Action 2025-DaytonT-15. Bridge Evaluations

Lead Agency:	Public Works Department		
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary: <ul style="list-style-type: none"> Dayton 03 Dayton 08 Dayton 21 		
Description of the Solution:	Public Works will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.		
Impact on Socially Vulnerable Populations:	Not applicable		
Impact on Future Development:	Not applicable		
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove bridges		May cause significant traffic problems
	Replace bridges		Cost prohibitive

11. VILLAGE OF DELEVAN

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Village of Delevan with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Delevan, describes who participated in the planning process, assesses Delevan's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

11.1 HAZARD MITIGATION PLANNING TEAM

The Village of Delevan identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Village departments. The Village Clerk represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 11-1 summarizes Village officials who participated in the development of the annex and in what capacity. Additional documentation of the Village's planning activities through Steering Committee meetings is included in Volume I.

Table 11-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Gina Maltby, Clerk Address: Main Street, PO Box 216, Delevan NY 14042 Phone Number: (716) 492-1424 Email: delevanclerk@roadrunner.com	Name/Title: Daren Smith, Public Works Superintendent Address: Main Street, PO Box 216, Delevan NY 14042 Phone Number: (716) 492-0281 Email: delevansupt@roadrunner.com
National Flood Insurance Program Floodplain Administrator	
Name/Title: Christopher Lexer, Code Enforcement Officer Address: Main Street, PO Box 216, Delevan NY 14042 Phone Number: (716) 560-8964 Email: yorkshirecode@yahoo.com	

11.2 COMMUNITY PROFILE

The Village of Delevan is located in the east-central part of the Town of Yorkshire in Cattaraugus County in western New York State. The Village of Delevan has a total area of 0.99 square miles. New York State Route 16 passes through the village.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 5.9 percent of the population is 5 years of age or younger, 22.4 percent is 65 years of age or older, 0 percent is non-English speaking, 20.6 percent is below the poverty threshold, and 25.8 percent is considered disabled.

11.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Delevan performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Delevan to identify opportunities for integrating mitigation concepts into ongoing Village procedures.

11.3.1 Planning and Regulatory Capability and Integration

Table 11-2 summarizes the planning and regulatory tools that are available to Delevan.

Table 11-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 1, 2023: Building Construction and Fire Prevention	State and Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk? This chapter provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code) in this Village. This chapter is adopted pursuant to Section 10 of the Municipal Home Rule Law. Except as otherwise provided in the Uniform Code, other state law, or other section of this chapter, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions of this chapter.				
Zoning/Land Use Code	Yes	Local Law 3, 2023: Amending Village Zoning Law and Zoning Map	Local	Zoning Officer
How has or will this be integrated with the HMP and how does this reduce risk? For the purpose of promoting the public health, safety, morals, comfort and general welfare; conserving and protecting property and property values; securing the most appropriate use of land; lessening or avoiding congestion in the public streets and highways; minimizing flood losses in areas subject to periodic inundation; and facilitating adequate but economical provision of public improvements, all in accordance with a comprehensive plan, the Village Board finds it				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
necessary and advisable to regulate the location, size and use of buildings and other structures; percentages of lot area which may be occupied; setback building lines; sizes of yards, courts and other open spaces; and the use of land for trade, industry, residences, recreation or other purposes, and for such purpose divides the incorporated area of the Village into districts or zones.				
Subdivision Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Site Plan Code	Yes	Local Law 3, 2023: Amending Village Zoning Law and Zoning Map – Article 7	Local	Zoning Officer
How has or will this be integrated with the HMP and how does this reduce risk? The intent of the site plan review process is to preserve and enhance the character of a neighborhood, achieve compatibility with adjacent development, mitigate potentially negative impacts on traffic, parking, drainage and similar environmental concerns, improve the overall visual and aesthetic quality of the Village, and increase the capability of the Zoning Code to adapt to a variety of unique circumstances.				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to “caveat emptor,” a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.				
Growth Management	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Environmental Protection Ordinance(s)	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Flood Damage Prevention Ordinance	Yes	Local Law 1, 1987: Flood Damage Prevention	Federal, State, County and Local	Code Enforcement
How has or will this be integrated with the HMP and how does this reduce risk? Promotes public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas. A. Regulate uses which are dangerous to health, safety and property due to water or erosion hazards or which result in damaging increases in erosion or in flood heights or velocities. B. Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction.				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
C. Control the alteration of natural floodplains, stream channels and natural protective barriers which are involved in the accommodation of floodwaters. D. Control filling, grading, dredging and other development which may increase erosion or flood damages. E. Regulate the construction of flood barriers which will unnaturally divert floodwaters or which may increase flood hazards to other lands. F. Qualify for and maintain participation in the National Flood Insurance Program.				
Wellhead Protection	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Emergency Management Ordinance	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Climate Change Ordinance	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Other	No	-	-	-

RESPONSE/RECOVERY PLANNING

Comprehensive Emergency Management Plan	Yes	Comprehensive Emergency Management Plan (CEMP)	County	Cattaraugus County OES
--	-----	--	--------	------------------------

How has or will this be integrated with the HMP and how does this reduce risk?

The CEMP defines the scope of preparedness and emergency management activities necessary in the County. This document assigns responsibility to organizations and individuals for carrying out specific actions that exceed routine responsibility at projected times and places during an emergency; sets lines of authority and organizational relationships and shows how all actions will be coordinated; identifies how people and property are protected; and identifies personnel, equipment, facilities, supplies, and other resources available within the jurisdiction or by agreement with other jurisdictions.

Continuity of Operations Plan	No	-	-	-
--------------------------------------	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Substantial Damage Response Plan	No	-	-	-
---	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Threat and Hazard Identification and Risk Assessment	No	-	-	-
---	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Post-Disaster Recovery Plan	No	-	-	-
------------------------------------	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Public Health Plan	Yes	Health Department Strategic Plan 2022–2025	County	Cattaraugus County Health Department
---------------------------	-----	--	--------	--------------------------------------

How has or will this be integrated with the HMP and how does this reduce risk?

The Cattaraugus County Health Department's (CCHD) Strategic Planning Process began in April 2022 using the resources of the New York State Department of Health NYS Public Health Corp Fellows. As a part of this process, the fellows reviewed the 2018–2021 strategic plan for past successes and failures and discussed what was needed for future success. Both an external assessment, in which county demographic data, economic factors, health outcomes, and community health assessment findings that have the potential to affect the agency and strategies were examined, and an internal assessment of a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis was completed.

Other: Community Needs Assessment and Community Health Improvement Plan	Yes	Community Needs Assessment and Community Health Improvement Plan	County	Cattaraugus County Health Department
--	-----	--	--------	--------------------------------------

How has or will this be integrated with the HMP and how does this reduce risk?

The 2022–2024 OGH/BRMC Community Service Plan (CSP) and the CCHD's Community Health Assessment and Community Health Improvement Plan (CHA-CHIP) were conducted to identify significant health needs as outlined by the New York State Department of Health's 2022–2024 Prevention Agenda, where applicable. It also provides critical information OGH/BRMC, the CCHD, and others in a position to make a positive impact on the health of the region's residents. The CSP/CHA-CHIP enables the health department, hospital, and other community partners to strategically establish priorities, develop interventions, and direct resources to improve the health of residents living in the service area.

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------	--	---	--

The CSP/CHA-CHIP includes a detailed examination of priority areas identified in the NYS Prevention Agenda: (1) prevent chronic diseases; (2) promote a healthy and safe environment; (3) promote healthy women, infants and children; (4) promote well-being and prevent mental health and substance use disorders; and (5) prevent communicable diseases. The Prevention Agenda is a six-year effort to make New York the healthiest state. Developed in collaboration with 140 organizations, the plan identifies New York's most urgent health concerns, and suggests ways local health departments, hospitals, and partners from health, business, education, and community organizations can work together to solve them.

11.3.2 Development and Permitting Capability

Table 11-3 summarizes the capabilities of Delevan to oversee and track development.

Table 11-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?		
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	Yes	Code Enforcement/Zoning
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	Code Enforcement/Zoning
Do you have a buildable land inventory?		
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 	No	-
Describe the level of buildout in your jurisdiction.	N/A	The Village has land available or future development.

11.3.3 Administrative and Technical Capability

Table 11-4 summarizes potential staff and personnel resources available to Delevan and their current responsibilities that contribute to hazard mitigation.

Table 11-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	No	-
Zoning Board of Adjustment	No	-
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	Services provided by the DPW include highway and road maintenance and water system maintenance.
Construction/Building/Code Enforcement Department	Yes	Enforces the building code, performs inspections, administers the NFIP.
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	Yes	Fire Department
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

11.3.4 Fiscal Capability

Table 11-5 summarizes financial resources available to Delevan.

Table 11-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	Yes
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	Yes
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	Yes
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	Yes
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	Yes

11.3.5 Education and Outreach Capability

Table 11-6 summarizes the education and outreach resources available to Delevan.

Table 11-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Mayor
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	No	-
Natural disaster/safety programs in place for schools	Yes	
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

11.3.6 Community Classifications

Table 11-7 summarizes classifications for community programs available to Delevan.

Table 11-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

11.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 11-8 summarizes the adaptive capacity for each identified hazard of concern and the Village’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 11-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Moderate

11.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 11-1 is responsible for maintaining this information.

11.4.1 NFIP Statistics

Table 11-9 summarizes the NFIP policy and claim statistics for Delevan.

Table 11-9. Delevan NFIP Summary of Policy and Claim Statistics

# Policies	3
# Claims (Losses)	0
Total Loss Payments	\$0.00
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

11.4.2 Flood Vulnerability Summary

Table 11-10 provides a summary of the NFIP program in Delevan.

Table 11-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Stranburg Street, Delevan Ave, Cobb Ave, Dorita Street as areas prone to flooding. The area surrounding Gheneybrook Creek is also prone to flooding.
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No

NFIP Topic	Comments
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Unknown
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Damage is assessed for monetary damages done to the building
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	Unknown
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	Unknown
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	If they are impacting over 50-percent of the existing structure.
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: Not applicable CAV: Not applicable
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 1, 1987: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	January 13, 1987
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements

NFIP Topic	Comments
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Yes, site plan review.
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

11.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 11-11 through Table 11-13.

Table 11-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 11-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

There has been no recent major development or infrastructure between 2019 to present.

* Only location-specific hazard zones or vulnerabilities identified.

Table 11-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

There are no known or anticipated major development or infrastructure in the next five years.

11.6 JURISDICTIONAL RISK ASSESSMENT

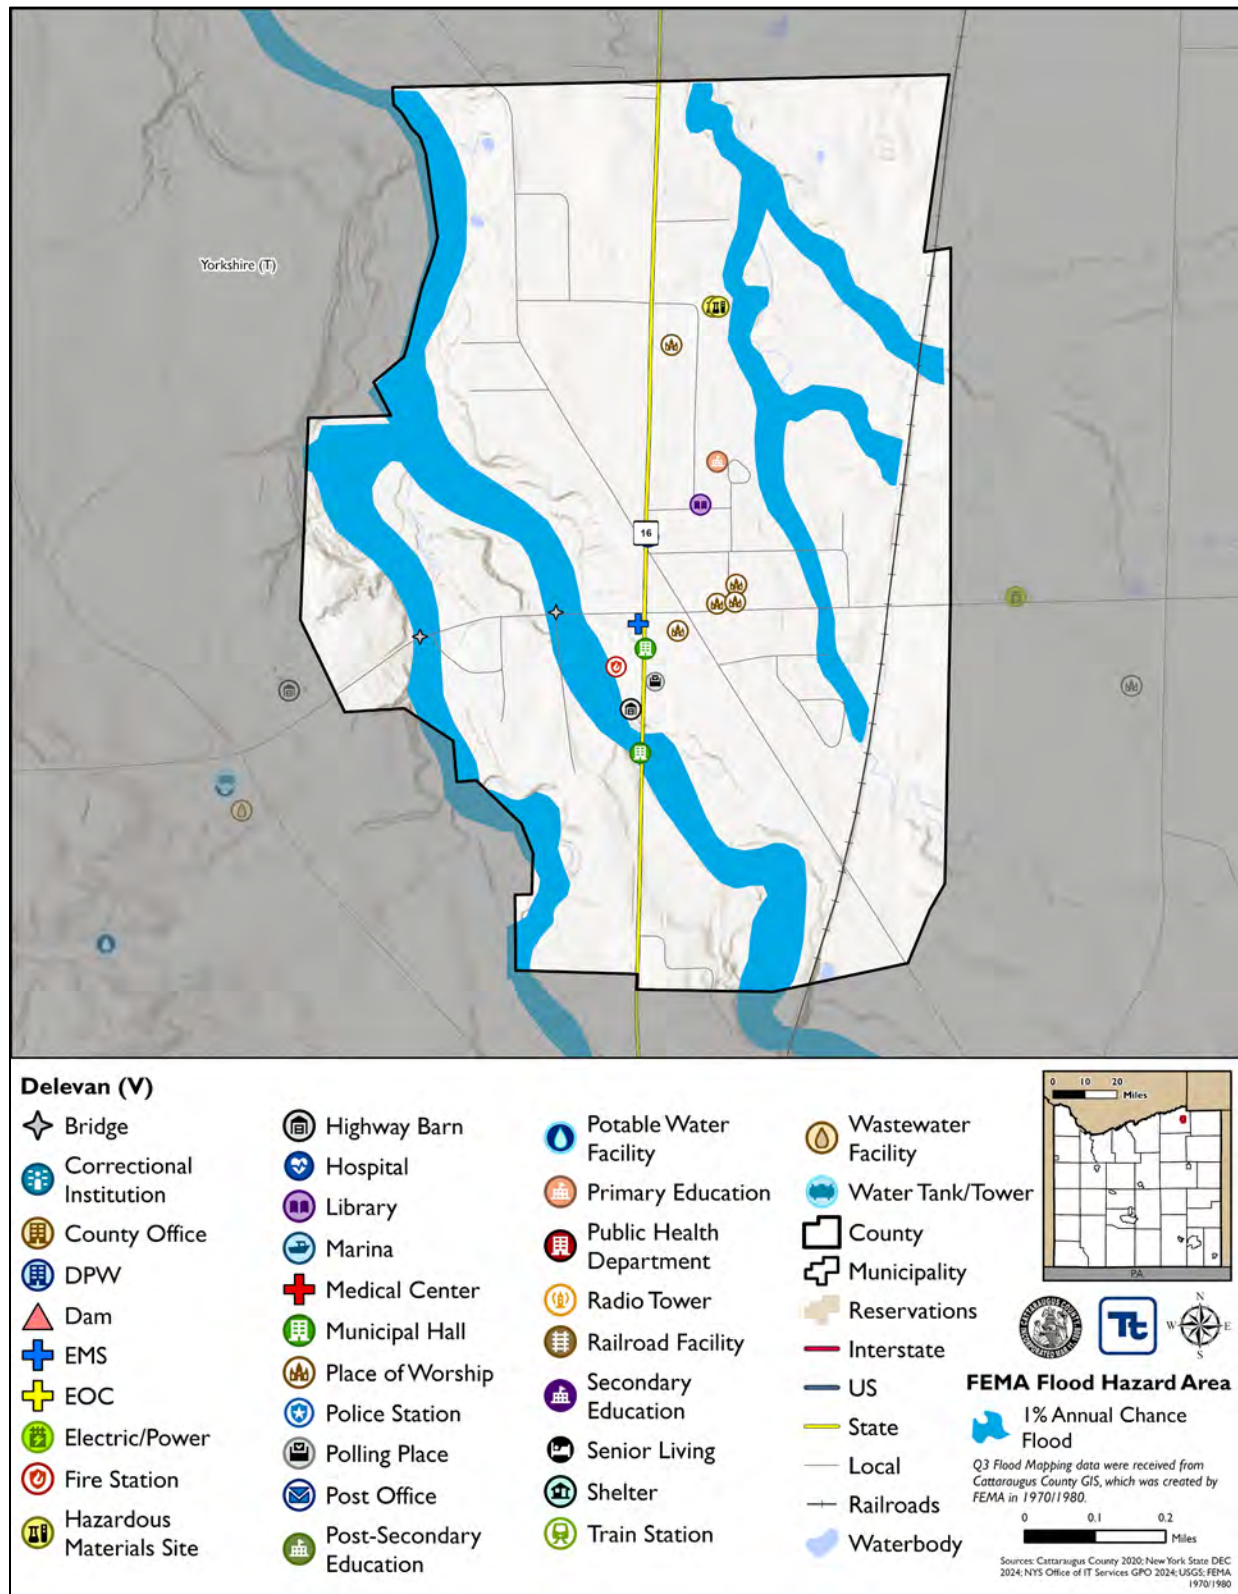

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Delevan's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

11.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Village are shown in Figure 11-1 through Figure 11-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Delevan has significant exposure. The maps show the location of potential new development, where available.

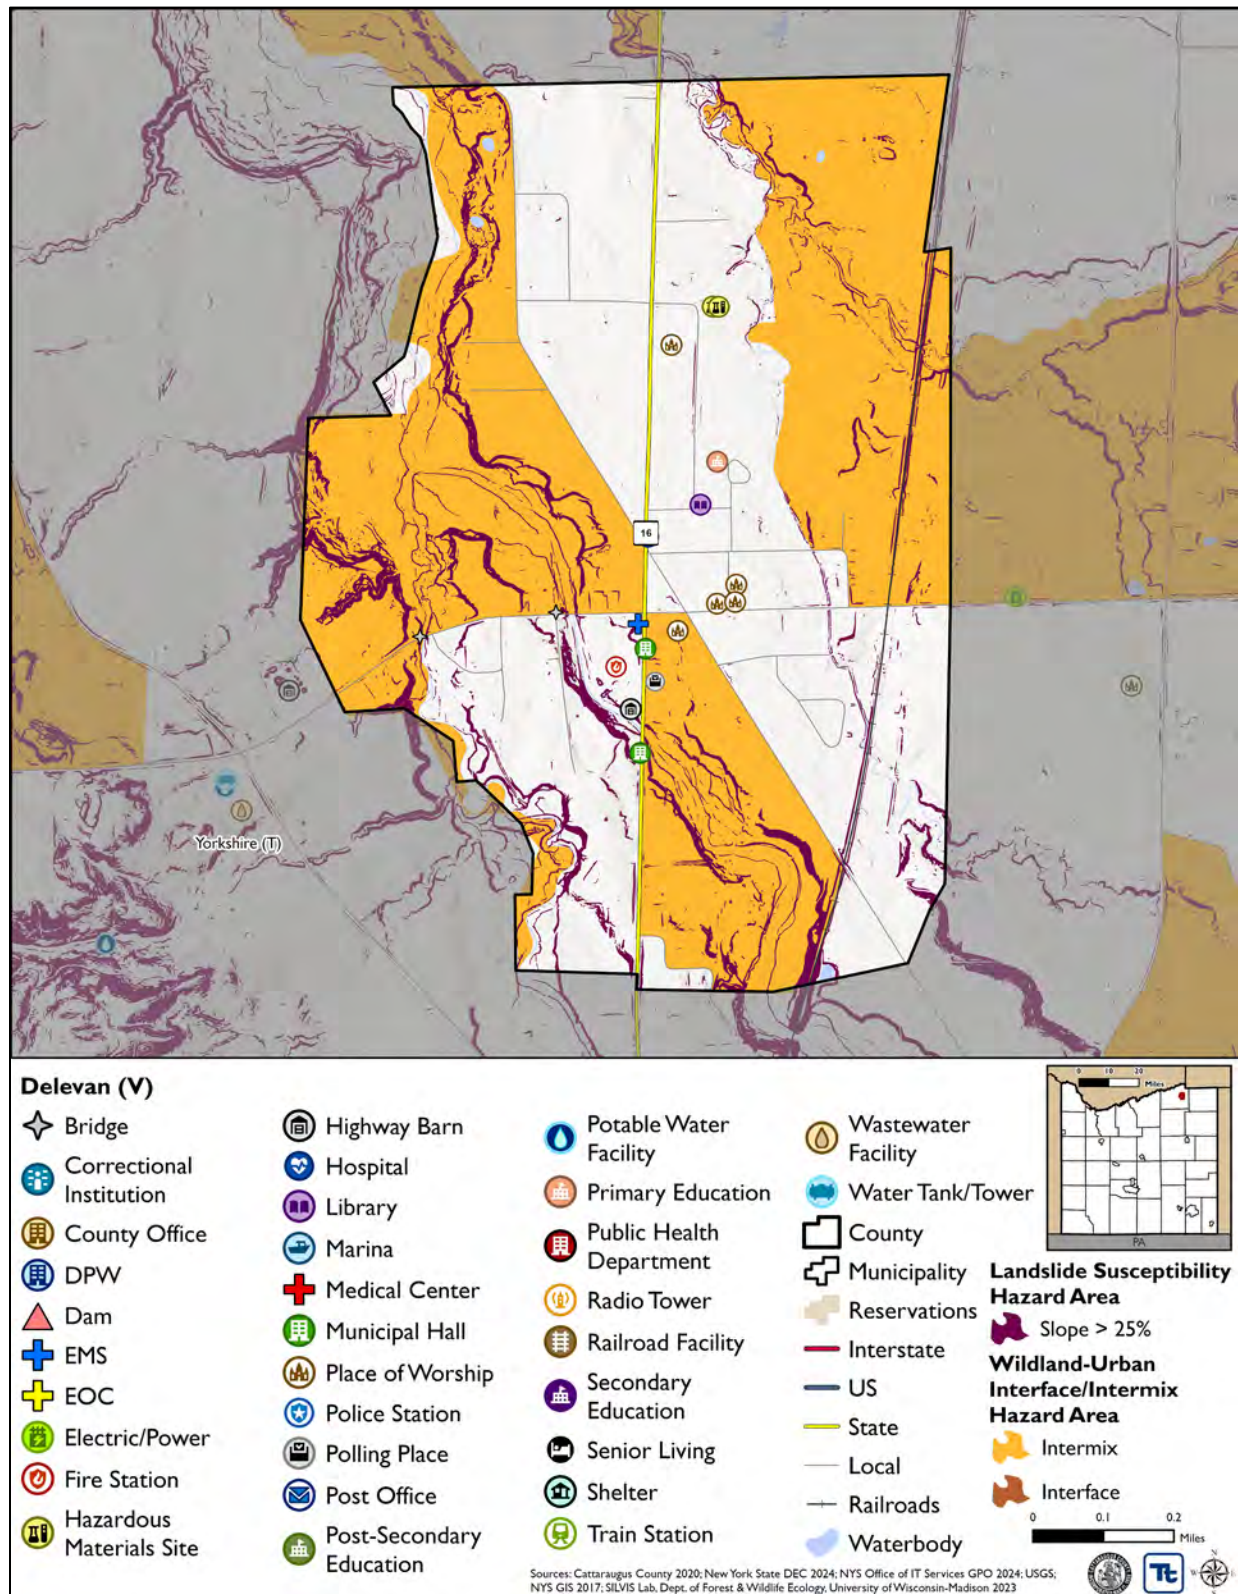

Figure 11-1. Delevan Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 11-2. Delevan Landslide and Wildfire Hazard Area Extent and Location Map

11.6.2 Hazard Event History

The history of natural and non-natural hazard events in Delevan is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 11-14 provides details on loss and damage in Delevan during hazard events since the last hazard mitigation plan update.

Table 11-14. Hazard Event History in Delevan

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Delevan
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	Trees and power lines down; minor localized flooding.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Village adhered to the COVID-19 guidelines, with individuals working from home or practicing social distancing.
January 12, 2020	High Wind	N/A	High wind	Trees and power lines down
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	No damages or losses incurred
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	No damages or losses incurred
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	No damages or losses incurred
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	No damages or losses incurred
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	Trees and power lines down
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	No damages or losses incurred
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	Trees and power lines down
March 6, 2022	High Wind	N/A	High wind	Trees and power lines down
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	No damages or losses incurred
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	Response from Highway Department for snow removal

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

11.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Delevan .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Delevan reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Village indicated the following:

- The Landslide risk should be decreased from 'Medium' to 'Low' due to the risk being limited to the vicinity of Prospect Road. There are not many steep slopes within the Village.

Table 11-15 shows Delevan's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 11-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Low
Flood	Medium
Landslide	Low
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 11-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 11-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Delevan Bridge	Bridge	X	-	2025-DelevanV-11	-

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event

Yorkshire 13	Bridge	X	-	2025-DelevanV-11	-

Source: Cattaraugus County 2024

11.6.4 Identified Issues

After a review of Delevan's hazard event history, hazard rankings, hazard location, and current capabilities, Delevan identified the following vulnerabilities within the community:

- The Village of Delevan Municipal Hall is in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.
- Critical facilities require backup power to ensure continuity of operations. The Municipal Building (85 South Main Street) and Garage (Fire Truck bays and municipal offices), and Delevan Fire Department (1006 North Main Street) do not have automatic backup power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds severe weather and severe winter weather are known to cause utility failures, which would impact the continuity of operations at the critical facilities.
- Cobb Street, Church Street, First Avenue, Owens Avenue, and Stevens Street flood on a regular basis due to debris in creek. Dead trees and debris need to be removed from area behind Central School on Olmstead Avenue. Army Corps and NYS DEC have restrictions in place due to region being identified as wetlands.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. The Village needs to determine local vulnerabilities to landslides threatening Prospect Street.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The Village currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.
- The Village has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Village which may benefit from flood mitigation strategies, such as the elevation

of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding, including:

- Stranburg Street
- Delevan Avenue
- Cobb Avenue
- Dorita Street
- North Main Street
- School Street
- The area surrounding Gheneybrook Creek is prone to flooding, impacting nearby roads and properties. Gheneybrook Creek has bank erosion issues, threatening encroachment onto nearby roads. Creek banks become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding. Additional flood mitigation measures may also be considered.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Delevan Bridge
 - Yorkshire 13

11.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

11.7.1 Past Mitigation Action Status

Table 11-17 indicates progress on the Village's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

11.7.2 Additional Mitigation Efforts

Delevan did not identify any additional mitigation efforts completed since the last HMP.

Table 11-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Delevan-001	Repair present and install new stormwater drainage system on Delevan Ave	Village Board	Flood, Severe Storm	<p>Problem: Delevan Ave underpass continually floods, drainage is overwhelmed</p> <p>Solution: Install outlet pipe, replace or reconfigure to allow it to drain.</p>	1. No Progress 2. Lack of funding to support action	1. Include 2. Not applicable 3. Not applicable
2020-Delevan-002	Protect the Village of Delevan Municipal Hall to the 0.2% annual chance flood event.	Engineer, facility operator	Flood	<p>Problem: The Village of Delevan Municipal Hall is in the special flood hazard area and vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.</p> <p>Solution: The village will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the Municipal Hall to protect it to the 0.2% annual chance level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the village will carry out the option.</p>	1. No Progress 2. Lack of funding to support action	1. Include 2. Not applicable 3. Not applicable
2020-Delevan-003	Portable generators for the Municipal Building, and Garage (Fire Truck bays and	Village FD, Village	All Hazards	<p>Problem: The Municipal Building (85 South Main) and Garage (Fire Truck bays and municipal offices), emergency shelter located at 1006 N Main St, and Delevan Fire</p>	1. In Progress 2. Portable generators are in place but could be used at other locations if permanent generators are installed.	1. Include 2. Remove emergency shelter as it has a generator. 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
	municipal offices), emergency shelter, and Delevan Fire Department located at 1006 North Main St			Department located at 1006 North Main St lack backup power Solution: Purchase and install portable generators for the Municipal Building and Garage (Fire Truck bays and municipal offices), emergency shelter, and Delevan Fire Department located at 1006 North Main St	Emergency Shelter has a generator._	
2020-Delevan-004	Automatic backup power for Machias Sewer	Village of Public Works	All hazards	Problem: Machias Sewer currently does not have a form of backup power. During a power outage, the station cannot function properly. Lack of power prevents pumps from pumping properly, threat sewage overflow, and potential impacts to the health and safety of the community. Solution: Purchase and install backup generator for Machias sewer station. A generator would allow the station to pump properly during a power outage and prevent overflow and other issues associated with a power outage.	1. No Progress 2. Outside of jurisdiction's authority	1. Discontinue 2. Not applicable 3. Outside of jurisdiction's authority
2020-Delevan-005	Cobb Street, Church St, First Ave, Owens, and Stevens St creek debris removal	Village of Delevan, DEC	Severe Storm, Flood	Problem: Cobb Street, Church St, First Ave, Owens, and Stevens St floods on a regular basis due to debris in creek. Dead trees and debris need to be removed from area behind the school. But Army Corps and DEC said it was wetlands	1. In Progress 2. Discussions with DEC	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				Solution: Work with DEC and remove debris and growth from creeks along roads.		
2020-Delevan-006	Prospect Street Landslide Study	Village supervisor	Landslide	<p>Problem: The village needs to determine local vulnerabilities to landslides threatening Prospect Street</p> <p>Solution: Work with county to conduct surveys to determine local vulnerabilities to landslides threatening Prospect Street, coordinate with municipalities to limit development in these areas and develop remedial measures for existing vulnerabilities.</p>	<p>1. No Progress</p> <p>2. Lack of funding to support action</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Delevan-007	Improve internet access for village businesses and residents	Village	Utility Failure	<p>Problem: There is limited internet access for Village residents and businesses.</p> <p>Solution: Improve internet access so businesses and residents can efficiently connect to the internet and get alerts on hazards</p>	<p>1. Complete</p> <p>2. Whole Village has access due to work from cable companies.</p>	<p>1. Discontinue</p> <p>2.</p> <p>3.</p>
2020-Delevan-008	Update Flood Damage Prevention Ordinance	Village Board	Flood	<p>Problem: The village lacks an updated flood damage prevention ordinance</p> <p>Solution: The village will develop an updated flood damage prevention ordinance.</p>	<p>1. No Progress</p> <p>2. Other Village priorities took precedent.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Delevan-009	The Floodplain Administrator should attend training on floodplain management.	FPA	Flood	Problem: Floodplain Managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Solution: The floodplain administrator will attend trainings to help them prevent and mitigate flooding in their community.	1. In Progress 2. Some training has been taken but interested in further knowledge.	1. Include 2. Not applicable 3. Not applicable
2020-Delevan-010	Provide information to residents, business owners, and organizations about what they can do to protect their structures from wildfires	Village Supervisor	Wildfires	Problem: Additional public education on wildfire risk is needed. Solution: Provide wildfire information to community and what they can do to protect their structures from wildfires.	1. No Progress 2. Lack of funding to support action	1. Include 2. Expand action to include public outreach to all hazards 3. Not applicable
2020-Delevan-011	Update the Emergency Operations Plan	County, Village	All Hazards	Problem: outdated emergency operation plan Solution: Update the village's emergency operation plan	1. No Progress 2. Lack of funding to support action	1. Include 2. Not applicable 3. Not applicable
2020-Delevan-012	Update Building Codes	County, Village	All Hazards	Problem: outdated building codes Solution: Update the village's building codes	1. Ongoing Capability 2. Village performs this action regularly.	1. Discontinue 2. Not applicable 3. Village performs this action regularly.
2020-Delevan-013	North Main and School St drainage	Village	Flood, Severe Storm	Problem: During heavy rain, deteriorating drains are unable to	1. No Progress 2. Lack of funding to support action	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				handle water. Flooding along the roadway and properties Solution: Under drainage needs replaced due to failure. Determine if village has easements or right of ways		

11.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Delevan participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Delevan would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Village priorities.

Table 11-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 11-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 11-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X			X			X			X
Flood	X	X	X	X	X		X	X	X	X
Landslide	X	X		X	X		X			X
Pandemic	X			X			X			X
Severe Storm	X	X		X	X		X		X	X
Severe Winter Storm	X	X		X	X		X		X	X
Utility Failure	X	X		X			X		X	X
Wildfire	X	X		X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 11-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-DelevanV-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-DelevanV-02	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-DelevanV-03	Debris Removal	1	1	1	1	0	0	1	1	1	0	1	1	0	1	10	Medium
2025-DelevanV-04	Landslide Mitigation	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-DelevanV-05	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-DelevanV-06	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-DelevanV-07	Comprehensive Outreach Program	1	1	1	1	1	1	0	1	1	1	1	1	0	1	12	High
2025-DelevanV-08	Comprehensive Emergency Management Plan Update	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-DelevanV-09	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-DelevanV-10	Gheneybrook Creek Erosion	1	1	1	1	0	0	1	1	1	1	1	1	0	1	11	High
2025-DelevanV-11	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-DelevanV-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Village of Delevan Municipal Hall is in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.										
Description of the Solution:	<p>The Village will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the Village will carry out the option.</p>										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Village Budget										
Implementation Timeline:	Within 5 Years										
Goals Met:	1, 3, 5										
Benefits:	Ensures continuity of operations of several critical facilities in the Village.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.										
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.										
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.										
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.										
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facility</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr><tr><td>Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events</td><td>Reduction in response times and delay of critical services in the immediate area.</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.
Action	Evaluation										
No Action	Current problem exists										
Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area										
Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.										

Action 2025-DelevanV-02. Generators at Critical Facilities

Lead Agency:	Engineering										
Supporting Agencies:	Village Board, Fire Department, Public Works										
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Municipal Building (85 South Main Street) and Garage (Fire Truck bays and municipal offices), and Delevan Fire Department (1006 North Main Street) do not have automatic backup power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds severe weather and severe winter weather are known to cause utility failures, which would impact the continuity of operations at the critical facilities.										
Description of the Solution:	The Village Engineer will conduct a study to determine the required generator capacity to support the critical facilities. The Village will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for this critical facility and its operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Village Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of a critical facility that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)

Microgrid	Costly and difficult to implement.										
Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.										

Action 2025-DelevanV-03. Debris Removal

Lead Agency:	Public Works		
Supporting Agencies:	Engineering, NYS DEC, USACE		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Cobb Street, Church Street, First Avenue, Owens Avenue, and Stevens Street flood on a regular basis due to debris in creek. Dead trees and debris need to be removed from area behind Central School on Olmstead Avenue. Army Corps and NYS DEC have restrictions in place due to region being identified as wetlands.		
Description of the Solution:	Work with USACE and NYS DEC to obtain any necessary permitting for debris removal. Continue to work with these outside agencies to remove debris and growth from creeks along roads.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, Village Budget, NYS DEC		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 2		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage to properties. The natural ecosystem in the area behind Central School on Olmstead Avenue is cleaned and can return to a thriving habitat.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development along or near Cobb Street, Church Street, First Avenue, Owens Avenue, and Stevens Street will have its risk of flood impacts reduced.		
Impact on Critical Facilities/Lifelines:	This action will reduce the risk of flood from the Central School, a critical facility within the Village.		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action removed debris from waterways, reducing the risk of back-flooding from debris pile-ups.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input checked="" type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input checked="" type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Install retention basin		Not enough room
	Install stormwater pipes		Costly

Action 2025-DelevanV-04. Landslide Mitigation

Lead Agency:	Public Works Department										
Supporting Agencies:	Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. The Village needs to determine local vulnerabilities to landslides threatening Prospect Street.										
Description of the Solution:	The Village Engineer will complete an assessment to identify an appropriate, cost-effective method to mitigation landslide risk along Prospect Street. Possible mitigation measures include: <ul style="list-style-type: none">• Construction of retaining walls, soil nailing, ground anchor walls• Install horizontal drains to reduce soil saturation• Cut banks along water ways to prevent oversaturated soils from falling• Install netting										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Village Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by landslide along Prospect Street. Keeping the roadway open to traffic also permits vulnerable populations to travel to critical appointments.										
Impact on Future Development:	Future development in the impacted area will be less likely to be impacted by landslides.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Village's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Reconstruct roadway outside of hazard area</td><td>Not feasible</td></tr><tr><td>Close road and reroute traffic around hazard area</td><td>Not feasible, would cause confusion amongst travelers</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Reconstruct roadway outside of hazard area	Not feasible	Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers		
Action	Evaluation										
No Action	Current problem exists										
Reconstruct roadway outside of hazard area	Not feasible										
Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers										

Action 2025-DelevanV-05. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement		
Supporting Agencies:	Village Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Village will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Village will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Village Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-DelevanV-06. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Village Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.		
Description of the Solution:	Where feasible, the Village will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Village Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-DelevanV-07. Comprehensive Outreach Program

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus County										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Village currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on hazard risks and methods of mitigation measures, including those for dam and levee failure, flood, landslide, pandemic, severe storm, severe winter storm, utility failure, and wildfire. Methods of distribution may include Village events, the Village newsletters, social media, the Village website, and having the materials on display for the public at Village libraries and offices. Outreach materials will be specified with education and information for each individual hazard of concern.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the current public education and outreach program in the Village by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Village.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the various hazards which may impact them in the Village.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of potential hazards. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's already existing public education and outreach program and adapt it to the Village's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from hazards and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Village</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-DelevanV-08. Comprehensive Emergency Management Plan Update

Lead Agency:	Village Fire Chief										
Supporting Agencies:	Village Board, Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Village has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Village Fire Chief will lead the update of the Comprehensive Emergency Management Plan (CEMP), with support from the Village Board and Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Village will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Village will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Village to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Village performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will create a new planning and response capability for the Village.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Integrate hazard mitigation principles in only hazard appendices</td><td>The plan will miss integration opportunities in the basic plan and annexes</td></tr><tr><td>Ask County to integrate hazard mitigation into the County CEMP</td><td>Village CEMP will remain undeveloped</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Village CEMP will remain undeveloped		
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Village CEMP will remain undeveloped										

Action 2025-DelevanV-09. Floodprone Roads

Lead Agency:	Public Works Department										
Supporting Agencies:	Code Enforcement, Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	<p>Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Village which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding, including:</p> <ul style="list-style-type: none">• Stranburg Street• Delevan Avenue• Cobb Avenue• Dorita Street• North Main Street• School Street										
Description of the Solution:	<p>The Village will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include:</p> <ul style="list-style-type: none">• Elevation of roadways• Installation or improvement of drainage systems• Regrading of roadway and soils• Resurfacing or reshaping roadways										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Village Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Village's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate all flood-prone road system</td><td>Not feasible</td></tr><tr><td>Raise all flood prone roads</td><td>Cost prohibitive</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Relocate all flood-prone road system	Not feasible	Raise all flood prone roads	Cost prohibitive
Action	Evaluation										
No Action	Current problem exists										
Relocate all flood-prone road system	Not feasible										
Raise all flood prone roads	Cost prohibitive										

Action 2025-DelevanV-10. Ghenebrook Creek Erosion

Lead Agency:	Engineering		
Supporting Agencies:	Public Works		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	The area surrounding Ghenebrook Creek is prone to flooding, impacting nearby roads and properties. Ghenebrook Creek has bank erosion issues, threatening encroachment onto nearby roads. Creek banks become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding. Additional flood mitigation measures may also be considered.		
Description of the Solution:	The Village Engineer will assess the feasibility and cost-effectiveness of various stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements to prevent future flooding surrounding Ghenebrook Creek.		
Estimated Cost:	High		
Potential Funding Sources:	FEMA HMA, Village Budget, NYS DEC		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 2		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage to properties.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development surrounding Ghenebrook Creek will have its risk of flood impacts reduced.		
Impact on Critical Facilities/Lifelines:	Not applicable		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. These events can lead to an influx of water, resulting in flooding conditions.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Elevate nearby roads		Cost prohibitive
	Acquire all properties which flood		Cost prohibitive

Action 2025-DelevanV-11. Bridge Evaluations

Lead Agency:	Public Works Department		
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary: <ul style="list-style-type: none"> • Delevan Bridge • Yorkshire 13 		
Description of the Solution:	Public Works will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.		
Impact on Socially Vulnerable Populations:	Not applicable		
Impact on Future Development:	Not applicable		
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove bridges		May cause significant traffic problems
	Replace bridges		Cost prohibitive

12. TOWN OF EAST OTTO

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of East Otto with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of East Otto, describes who participated in the planning process, assesses East Otto's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

12.1 HAZARD MITIGATION PLANNING TEAM

The Town of East Otto identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Town Supervisor represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 12-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 12-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Ann Rugg, Supervisor Address: PO Box 47, East Otto, NY 14729 Phone Number: (716) 923-3690 Email: eottosupervisor@gmail.com	Name/Title: Thomas Benz, Highway Superintendent Address: PO Box 47, East Otto, NY 14729 Phone Number: (716) 560-5285 Email: eastottohwy@gmail.com
National Flood Insurance Program Floodplain Administrator	
Name/Title: Jeff Holmes, Code Enforcement Officer Address: PO Box 47, East Otto, NY 14729 Phone Number: (716) 307-3069 Email: eastottoceo@gmail.com	

12.2 COMMUNITY PROFILE

The Town of East Otto lies in the northeast part of Cattaraugus County in western New York State. The Town of East Otto has a total area of 41.6 square miles. The town shares its northern border with Erie County and is bordered on the east by the Town of Ashford. The Town of Ellicottville borders East Otto to the southeast, while the Town of Mansfield borders the town to the south. The Town of Otto borders the Town of East Otto to the west. There are five hamlets located within the town: Brooklyn, East Otto, Edies Siding, Plato, and Whiteford Hollow. Rainbow Lake and Timber Lake are the two largest bodies of water within the town, and East Otto Creek, Goodell Creek, Utley Brook, and South Branch Cattaraugus Creek flow through the town.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors

including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 4.7 percent of the population is 5 years of age or younger, 14.6 percent is 65 years of age or older, 0.9 percent is non-English speaking, 10.2 percent is below the poverty threshold, and 14.9 percent is considered disabled.

12.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

East Otto performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for East Otto to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

12.3.1 Planning and Regulatory Capability and Integration

Table 12-2 summarizes the planning and regulatory tools that are available to East Otto.

Table 12-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 1, 2007: NYS Uniform Fire Prevention and Building Code	State and Local	Code Enforcement Officer

How has or will this be integrated with the HMP and how does this reduce risk?

This local law provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code) and the State Energy Conservation Construction Code (the Energy Code) in this town. This local law is adopted pursuant to section 10 of the Municipal Home Rule Law. Except as otherwise provided in the Uniform Code, other state law, or other section of this local law, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions this local law.

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Zoning/Land Use Code	Yes	Zoning Ordinance 1992	Local	Code Enforcement Officer
For the purpose of promoting the public health, safety, morals, comfort and general welfare; conserving and protecting property and property values; securing the most appropriate use of land; lessening or avoiding flood losses in areas subject to periodic inundation; and facilitating adequate, but economical provision of public improvements, all in accordance with a comprehensive plan, the Town Board finds it necessary and advisable to regulate the location, size and use of buildings and other structures; percentages of lot area which may be occupied; setback building lines; sizes of yards, courts, and other open spaces; and the use of land for trace, industry, residences, recreation or other purposes, and for such purpose divides the unincorporated area of the Town into districts or zones.				
Subdivision Code	Yes	Town of East Otto Subdivision Regulations, Including Design Standards	Local	Planning Board
How has or will this be integrated with the HMP and how does this reduce risk? The purpose of the Town of East Otto Subdivision Regulations, Including Design Standards is to protect and provide for the public health, safety and general welfare of the town, to guide public and private policy, and to provide the most beneficial relationship between the uses of land and buildings.				
Site Plan Code	Yes	Zoning Ordinance 1992, Section 12.3	Local	Planning Board
How has or will this be integrated with the HMP and how does this reduce risk? Prior to the issuance of a building or special use permit, the applicant shall submit to the planning board a site plan, prepared in accordance with the provisions of this section. Such site plan review shall be required for all special uses and permitted uses as described in section 7.2 of this ordinance, as amended, agriculture, plant cultivation, forestry, single-family residences, two-family residences, fences and accessory uses to the above listed items.				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to “caveat emptor,” a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.

12.3.2 Development and Permitting Capability

Table 12-3 summarizes the capabilities of East Otto to oversee and track development.

Table 12-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits? <ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	Yes	Code Enforcement
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	Floodplain
Do you have a buildable land inventory? <ul style="list-style-type: none"> If you have a buildable land inventory, please describe 	No	-
Describe the level of buildout in your jurisdiction.	N/A	Town has area which could be used for future development.

12.3.3 Administrative and Technical Capability

Table 12-4 summarizes potential staff and personnel resources available to East Otto and their current responsibilities that contribute to hazard mitigation.

Table 12-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	Planning Board is responsible to initiate, investigate and make reports on planning and development matters; prepare a comprehensive master plan for adoption by the Town Board after a public hearing hear and decide all matters referred to it, or upon which it is required to pass under this ordinance; approve subdivision plats; review and approve, approve with modifications or disapprove site plans; review and approve, approve with modifications or disapprove special use permits; ensure that all actions comply with the provisions of the State Environmental Quality Review Act under article eight of the Environmental Conservation Law and its implementing regulations as codified in 6 NYCRR 617.
Zoning Board of Adjustment	Yes	Zoning Board is responsible to hear and determine appeals from and review any order, requirement, decisions or determination made by the Administration Official or Board; hear and decide all matters referred to it, or upon; hear and pass upon applications for Area or Use Variances ensure that all actions comply with the provisions of the state environmental quality review act under article eight of the environmental conservation law and its implementing regulations as codified in 6 NYCRR 617.
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	Highway Superintendent
Construction/Building/Code Enforcement Department	Yes	Code Enforcement Officer
Emergency Management/Public Safety Department	Yes	Fire Department
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	Yes	Emergency response MUAs
Human Resources Manual - Do any job descriptions specifically include identifying	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
or implementing mitigation projects or other efforts to reduce natural hazard risk?		
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

12.3.4 Fiscal Capability

Table 12-5 summarizes financial resources available to East Otto.

Table 12-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	No
Impact fees for homebuyers or developers of new development/homes	No
Stormwater utility fee	No

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Incur debt through general obligation bonds	No
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

12.3.5 Education and Outreach Capability

Table 12-6 summarizes the education and outreach resources available to East Otto.

Table 12-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Cattaraugus County Sheriff's Office
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	No	-
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	Yes	Town website and social media

12.3.6 Community Classifications

Table 12-7 summarizes classifications for community programs available to East Otto.

Table 12-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	Yes	5	4/2019
Public Protection (ISO Fire Protection Classes 1 to 10)	Yes	9	4/2019
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-

Program	Participating? (Yes/No)	Classification	Date Classified
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

12.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 12-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 12-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Interruption	Moderate
Wildfire	Moderate

12.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 12-1 is responsible for maintaining this information.

12.4.1 NFIP Statistics

Table 12-9 summarizes the NFIP policy and claim statistics for East Otto.

Table 12-9. East Otto NFIP Summary of Policy and Claim Statistics

# Policies	3
# Claims (Losses)	24
Total Loss Payments	\$305,034.38

# Repetitive Loss Properties (NFIP definition)	4
# Repetitive Loss Properties (FMA definition)	1
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

12.4.2 Flood Vulnerability Summary

Table 12-10 provides a summary of the NFIP program in East Otto.

Table 12-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Zoar Valley, Swamp Rd., Low lying areas in the Hamlet
Do you maintain a list of properties that have been damaged by flooding?	Yes
Do you maintain a list of property owners interested in flood mitigation?	Yes
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	1 currently
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	FEMA regulations
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	One that was demolished by the owner
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	One that was demolished by the owner
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement

NFIP Topic	Comments
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	FEMA regulations
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: January 27, 2011 CAV: October 16, 2023
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 1, 1988: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	1988
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	The Town evaluates flood risk
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

12.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 12-11 through Table 12-13.

Table 12-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	3	0	0	3

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
Permits within SFHA	0	0	0	0
2020				
Total Permits	7	0	0	7
Permits within SFHA	0	0	0	0
2021				
Total Permits	5	0	0	5
Permits within SFHA	0	0	0	0
2022				
Total Permits	6	0	0	6
Permits within SFHA	0	0	0	0
2023				
Total Permits	5	0	0	5
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 12-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any recent major development or infrastructure occurred between 2019 to present.

* Only location-specific hazard zones or vulnerabilities identified.

Table 12-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

The Town did not indicate any known or anticipated major development or infrastructure in the next five years.

12.6 JURISDICTIONAL RISK ASSESSMENT

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of East Otto's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

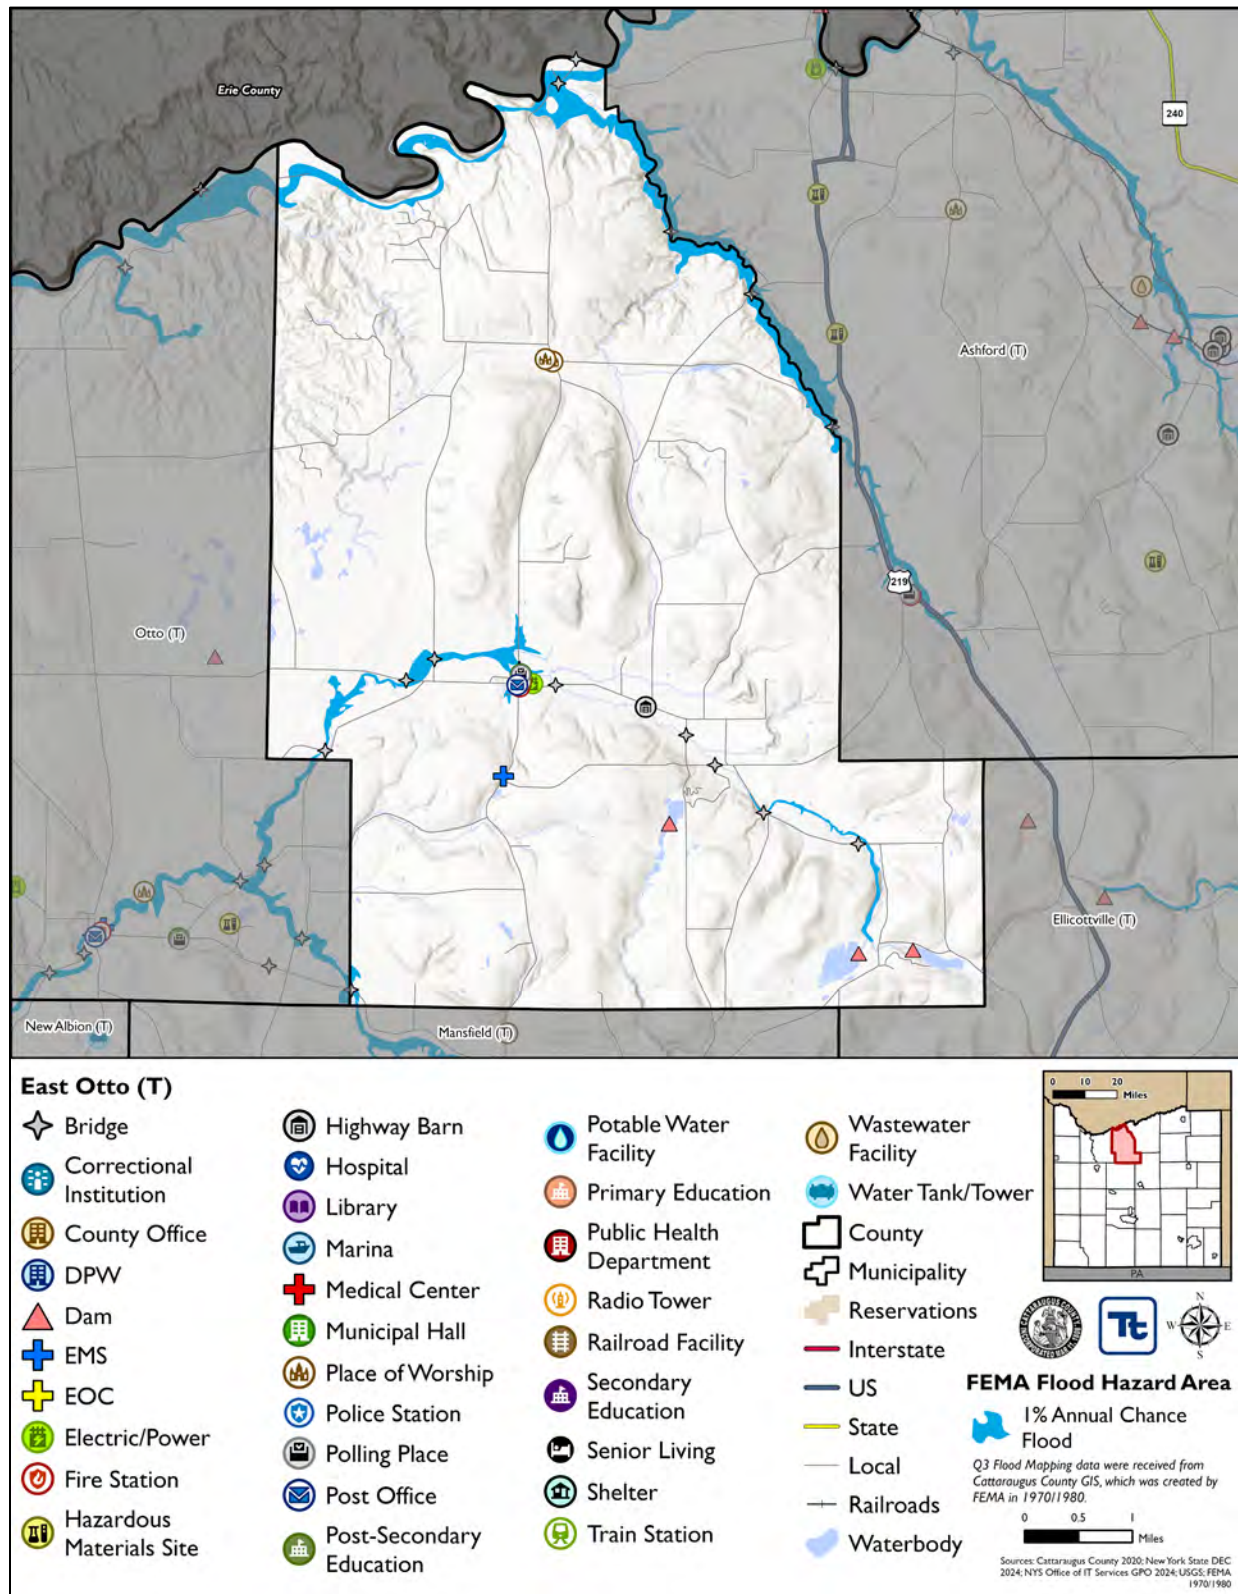

12.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 12-1 through Figure 12-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which East Otto has significant exposure. The maps show the location of potential new development, where available.

DRAFT

Figure 12-1. East Otto Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 12-2. East Otto Landslide and Wildfire Hazard Area Extent and Location Map

12.6.2 Hazard Event History

The history of natural and non-natural hazard events in East Otto is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 12-14 provides details on loss and damage in East Otto during hazard events since the last hazard mitigation plan update.

Table 12-14. Hazard Event History in East Otto

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in East Otto
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur any documented damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	Adhered to mandates
January 12, 2020	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur any documented damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur any documented damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur any documented damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur any documented damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur any documented damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not incur any documented damage or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur any documented damage or losses.
March 6, 2022	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	Trees and powerlines downed
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Town did not incur any documented damage or losses.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

12.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for East Otto .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. East Otto reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town agreed with the preliminary rankings.

Table 12-15 shows East Otto's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 12-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Medium
Flood	Medium
Landslide	High
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 12-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 12-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
EAST OTTO 12	Bridge	X	-	2025-EastOttoT-15	-

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
East Otto 26	Bridge	X	-	2025-EastOttoT-15	-
East Otto 27	Bridge	X	-	2025-EastOttoT-15	-
East Otto 29	Bridge	X	-	2025-EastOttoT-15	-
East Otto 30	Bridge	X	-	2025-EastOttoT-15	-

Source: Cattaraugus County 2024

12.6.4 Identified Issues

After a review of East Otto's hazard event history, hazard rankings, hazard location, and current capabilities, East Otto identified the following vulnerabilities within the community:

- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. There are several locations in Town exposed to the landslide hazard:
 - Connoisarauley Road
 - Hammond Hill Road
 - Zoar Valley area experiences significant slides
 - Snake Run Road
 - Steep banks are vulnerable, especially during flash flooding
 - Crumb Hill Road
 - Edge of ravine
 - Traffic Street
- Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Town needs to identify locations for the placement of temporary sheltering.
- Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Town has four repetitive loss properties, but other properties may be impacted by flooding as well.
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms.

There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:

- Hammond Hill Road
 - Utley Road
 - Swamp Road
 - Harvey Road
 - Traffic Street
 - Maynard Road
 - Mason Road
 - County Road 12
- Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters including culverts located on the following roads:
 - Traffic Street
 - Maynard Road
 - The Town has dams within its jurisdiction. Despite not being identified as high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.
 - The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
 - Critical facilities require backup power to ensure continuity of operations. The Town Hall, a designated emergency shelter, does not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.
 - In the Zoar Valley, the Connoisarauley Creek and Cattaraugus Creek have stream bank erosion issues, threatening encroachment onto nearby roads. Stream banks become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding and potential landslide issues.
 - Open air storage of salt and sand leads to loss of materials from erosion and leaching. These materials exposed to heavy rains, snowfalls, and flooding conditions negatively impacts the environment and disrupts natural ecosystems. The loss of materials can result in the reduction in effectiveness of mitigating impacts from severe winter storms, as salt and sand is utilized to minimize potential risks on roadways, including ice and snow.
 - The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and

functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.

- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - East Otto 26
 - East Otto 27
 - East Otto 29
 - East Otto 30

12.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

12.7.1 Past Mitigation Action Status

Table 12-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

12.7.2 Additional Mitigation Efforts

East Otto did not identify any additional mitigation efforts completed since the last HMP.

Table 12-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-East Otto-001	Flood Damage Prevention Ordinance	Flood	FPA	<p>Problem: The Town of East Otto's flood damage prevention ordinance is outdated.</p> <p>Solution: The town will adopt an updated flood damage prevention ordinance to maintain NFIP compliance.</p>	<ol style="list-style-type: none">1. No Progress2. Town prioritized other projects	<ol style="list-style-type: none">1. Include2. Not applicable3. Not applicable
2020-East Otto-002	FPA and Code Enforcement Training	All Hazards	Administration	<p>Problem: Floodplain administration and code enforcement staff require additional training.</p> <p>Solution: The Code Enforcement staff, Town FPA, and staff who assist with floodplain administration will attend trainings and workshops offered by FEMA and NYS to develop additional floodplain administration and hazard mitigation skills.</p>	<ol style="list-style-type: none">1. No Progress2. Lack of available training	<ol style="list-style-type: none">1. Include2. Not applicable3. Not applicable
2020-East Otto-003	Landslide Studies	Landslide	Administration, Engineer	<p>Problem: Numerous locations are exposed to landslide:</p> <ul style="list-style-type: none">• Connoisarauley• Hammond Hill• Zoar Valley area experiences significant slides• Snake Run• Steep banks are vulnerable, especially during flash flooding• Crumb Hill	<ol style="list-style-type: none">1. No Progress2. Financial constraints	<ol style="list-style-type: none">1. Include2. Not applicable3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				<ul style="list-style-type: none">• Edge of ravine• Traffic Street <p>Solution: The town will conduct landslide studies to determine landslide risk and potential mitigation actions. The town will carry out the identified actions that are cost-effective.</p>		
2020-East Otto-004	Identification of Permanent Housing Locations	All Hazards	Administration	<p>Problem: The Town of East Otto needs to identify locations for the placement of permanent housing.</p> <p>Solution: The Town of East Otto will work with Cattaraugus County to identify regional locations for permanent housing.</p>	<ol style="list-style-type: none">1. No Progress2. Town prioritized other projects	<ol style="list-style-type: none">1. Include2. Not applicable3. Not applicable
2020-East Otto-005	Repetitive Flood Mitigation	Flood, Severe Storm	FPA, supported by homeowners	<p>Problem: Ongoing flood concerns exist in numerous areas of the Town of East Otto. The town currently has 8 repetitive loss properties. Several areas with repetitive flooding that are frequently cause for concern include:</p> <ul style="list-style-type: none">• Hammond Hill (Zoar Valley)• Utley Road• Swamp Road (ball diamond to Jeff's)• Harvey Road (beaver dam, end by Traffic Street)• Additional permitting work would be necessary and cooperation of private property owner.	<ol style="list-style-type: none">1. No Progress2. Town prioritized other projects	<ol style="list-style-type: none">1. Include2. Not applicable3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				<ul style="list-style-type: none">• Traffic Street (big culvert)• Maynard Road (Mugler)<ul style="list-style-type: none">• 4- or 5-foot culvert may be undersized.• Mason (bottom of hill)• County Road 12 (by Greens)• Dam failure<ul style="list-style-type: none">• Scoby Dam:<ul style="list-style-type: none">▪ Could lead to a rapid rise in Hammond Hill/Zoar Valley Area▪ There has been discussion regarding the removal of this dam• Timberlake Dike• Rainbow Lake Dike <p>Solution: Conduct outreach to 30 flood-prone property owners, including RL/SRL property owners and provide information on mitigation alternatives. After preferred mitigation measures are identified, collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/purchase/moving/elevating residential homes in the flood prone areas that experience frequent flooding (high risk areas).</p>		

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-East Otto-006	Backup Power for Critical Facilities	Utility Failure	Engineer, OEM, Highway	<p>Problem: The following critical facilities require backup power:</p> <ul style="list-style-type: none">• Highway Department• Highway Department's fuel pumps• Town Hall <p>Solution: The Town Engineer will research what size generator is necessary to supply backup power to each facility. The town will then install a backup power generator and necessary electrical components at each facility.</p>	1. No Progress 2. Financial constraints	1. Include 2. Not applicable 3. Not applicable
2020-East Otto-007	Explosion and Wildfire Outreach	Wildfire	OEM	<p>Problem: Potential explosion risk exists in the town which could also ignite wildfire: Multiple household propane tanks, several crop drying facilities, propane tanks, gas wells, multiple gas wells and pipelines.</p> <p>Solution: The town will conduct outreach on the dangers of explosive materials and wildfire risk.</p>	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable
2020-East Otto-008	Zoar Valley Stream Stabilization	Flood, Landslide	Administration	<p>Problem: Stream stabilization is needed in the Zoar Valley to prevent landslides and flood issues.</p> <p>Solution: The town will conduct the necessary stabilization measures.</p>	1. No Progress 2. Financial constraints	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-East Otto-009	Town Hall Upgrades to Support Sheltering	All Hazards	Administration	<p>Problem: The Town Hall is a designated emergency shelter. The building requires update to ensure it is capable of providing critical services. Necessary updates include:</p> <ul style="list-style-type: none">• Upgraded water• Upgraded septic• Backup power <p>Solution: The town will complete the necessary upgrades to allow for support of sheltering.</p>	<p>1. No Progress 2. Financial constraints</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>
2020-East Otto-010	Salt and Sand Barn	Severe Storm, Severe Winter Storm	Highway	<p>Problem: The Town of East Otto requires a sand/salt structure to protect the salt and sand supplies from exposure to precipitation and runoff into the locally protected stream. The stream is used by the NYS DEC hatchery. Relocation across the street is not currently feasible due to private property ownerships.</p> <p>Solution: The town will construct a salt sand barn with a structurally sound and weather-proof structure to protect the town salt and sand supply for winter storm response. The Highway Department will be responsible for construction.</p>	<p>1. No Progress 2. Financial constraints</p>	<p>1. Include 2. Not applicable 3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-East Otto-011	Emergency Operations Plan Update	All Hazards	OEM	<p>Problem: The Emergency Operations Plan requires update.</p> <p>Solution: The town will update the Emergency Operations Plan, using information collected during the hazard mitigation plan update.</p>	<p>1. No Progress</p> <p>2. Town prioritized other projects</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

12.7.3 Proposed Hazard Mitigation Actions for the HMP Update

East Otto participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that East Otto would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 12-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 12-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 12-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X				X					X
Flood	X	X		X	X		X		X	X
Landslide	X	X			X					X
Pandemic	X			X			X			X
Severe Storm	X	X			X				X	X
Severe Winter Storm	X	X			X				X	X
Utility Failure	X	X							X	X
Wildfire	X	X		X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 12-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-EastOttoT-01	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-EastOttoT-02	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-EastOttoT-03	Landslide Mitigation	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-EastOttoT-04	Temporary Sheltering	1	0	1	1	1	1	0	1	1	1	1	1	1	0	11	High
2025-EastOttoT-05	Repetitive Loss Properties	1	1	1	1	1	0	1	1	1	0	1	1	0	1	11	High
2025-EastOttoT-06	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-EastOttoT-07	Undersized Culverts	1	1	1	1	1	0	1	0	1	1	1	1	1	0	11	High
2025-EastOttoT-08	Dam Owner Partnership	1	1	1	1	1	1	0	1	1	0	1	1	1	0	11	High
2025-EastOttoT-09	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-EastOttoT-10	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-EastOttoT-11	Streambank Erosion	1	1	1	1	0	0	1	1	1	1	1	1	0	1	11	High
2025-EastOttoT-12	Salt and Sand Storage Shed	0	0	1	1	1	0	1	1	1	1	1	1	1	0	10	Medium
2025-EastOttoT-13	Comprehensive Emergency Management Plan Update	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-EastOttoT-14	Pandemic Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-EastOttoT-15	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-EastOttoT-01. Floodplain Management Training

Lead Agency:	Code Enforcement										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.										
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 3, 4										
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.										
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.										
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.										
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.										
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.										
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Hire outside contractors for floodplain administration</td><td>Costly</td></tr><tr><td>Establish shared service agreements for floodplain administration from neighboring municipalities</td><td>Neighboring municipalities are unlikely to have the staff capacity to take on this role</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Hire outside contractors for floodplain administration	Costly	Establish shared service agreements for floodplain administration from neighboring municipalities	Neighboring municipalities are unlikely to have the staff capacity to take on this role
Action	Evaluation										
No Action	Current problem exists										
Hire outside contractors for floodplain administration	Costly										
Establish shared service agreements for floodplain administration from neighboring municipalities	Neighboring municipalities are unlikely to have the staff capacity to take on this role										

Action 2025-EastOttoT-02. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-EastOttoT-03. Landslide Mitigation

Lead Agency:	Highway Department		
Supporting Agencies:	Engineering		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire		
Description of the Problem:	<p>Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. There are several locations in Town exposed to the landslide hazard:</p> <ul style="list-style-type: none"> • Connoisarauley Road • Hammond Hill Road <ul style="list-style-type: none"> • Zoar Valley area experiences significant slides • Snake Run Road <ul style="list-style-type: none"> • Steep banks are vulnerable, especially during flash flooding • Crumb Hill Road <ul style="list-style-type: none"> • Edge of ravine • Traffic Street 		
Description of the Solution:	<p>The Town Engineer will complete an assessment to identify an appropriate, cost-effective method to mitigation landslide risk. Possible mitigation measures include:</p> <ul style="list-style-type: none"> • Construction of retaining walls, soil nailing, ground anchor walls • Install horizontal drains to reduce soil saturation • Cut banks along water ways to prevent oversaturated soils from falling • Install netting 		
Estimated Cost:	TBD after mitigation technique is chosen		
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by landslide near the Allegany River. Keeping the roadway open to traffic also permits vulnerable populations to travel to critical appointments.		
Impact on Future Development:	Future development in the impacted area will be less likely to be impacted by landslides.		
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
	Action		Evaluation

Alternatives:	No Action	Current problem exists
	Reconstruct roadway outside of hazard area	Not feasible
	Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers

DRAFT

Action 2025-EastOttoT-04. Temporary Sheltering

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County Office of Emergency Services, Neighboring Jurisdictions, American Red Cross										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Town needs to identify locations for the placement of temporary sheltering.										
Description of the Solution:	The Town Supervisor will lead efforts to identify a suitable location to temporarily relocate residents or visitors in need of temporary sheltering. The Town will consider options to partner with neighboring jurisdictions for a regional location. The Town will contact the Cattaraugus County Office of Emergency Services for assistance as needed to identify a suitable, approved location.										
Estimated Cost:	Medium										
Potential Funding Sources:	Town Budget, County Budget, Neighboring Jurisdictions, American Red Cross, HSGP										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 4, 6										
Benefits:	Providing a safe, climate-controlled location for individuals in need following an emergency can provide a sense of gratitude and normalcy to an otherwise negative event. Removing individuals from at-risk locations and offering a temporary locations for impacted persons to gather, increases the safety of the overall community.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations are often the most risk during emergencies and disaster events. Offering a safe location for these populations can ensure their health is looked after and they are removed from harm's way.										
Impact on Future Development:	The temporary sheltering facility will be able to support population increases brought in from potential future development.										
Impact on Critical Facilities/Lifelines:	This action would create, or expand on already existing, critical facilities, as sheltering locations are critical facilities.										
Impact on Capabilities:	This action will create a new capability of the Town by offering a resource for its visitors and residents to utilize should they be in need of temporary sheltering.										
Climate Change Considerations:	The changing climate may lead to the Town, its residents, and visitors being exposed to hazards more frequently. Extreme temperatures have occurred more often in recent years which lead to drought; heavier rainfalls during severe storms have increased the occurrence of flooding. A temporary sheltering facility can provide a safe location for impacted individuals.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Utilize County facilities	May require signed agreements; reliant on County opening facilities										
Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility										

Action 2025-EastOttoT-05. Repetitive Loss Properties

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Frequent flooding events have resulted in damages to residential properties. These properties have been repetitively flooded as documented by paid NFIP claims. The Town has four repetitive loss properties, but other properties may be impacted by flooding as well.		
Description of the Solution:	The Town will conduct outreach to the impacted properties and will provide information on mitigation alternatives. After preferred mitigation measures are identified, the Town will collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/purchase/moving/elevating of the affected properties that experience frequent flooding. The parameters for this initiative would be funding, benefits versus cost, and willing participation of property owners.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA FMA, FMA SWIFT, Town Budget, County Budget, Property Owners		
Implementation Timeline:	3 years		
Goals Met:	1		
Benefits:	This action would foster comprehensive floodplain management by removing at risk properties from the flood hazard area or elevating properties to reduce the flood risk.		
Impact on Socially Vulnerable Populations:	Collecting data regarding homeowners that reside within flood prone areas provides an opportunity to introduce location-specific opportunities for assistance. Socially vulnerable populations may be able to have houses elevated or acquired when it would otherwise be unaffordable.		
Impact on Future Development:	Increased outreach to homeowners within a flood prone area will limit construction in areas that are prone to hazard events. Homes may be acquired, which will remove those structures from the floodplain and prevent future development on those sites.		
Impact on Critical Facilities/Lifelines:	Removing structures from the floodplain decreases the demand on utilities and emergency services including health and medical, law enforcement, and search and rescue.		
Impact on Capabilities:	Outreach which promotes the removal of risk from the immediate floodplain via acquisition of properties will free up resources for search and rescue and other emergency operations as needed. This action will enhance the Town's current NFIP capabilities.		
Climate Change Considerations:	Climate change is likely to increase the frequency and severity of severe rainfall, flash flooding, riverine flooding, and coastal flooding from sea level rise and storm surge events. Removing structures from the floodplain will reduce the response and recovery costs as a result of these events and decrease the loss of human life as a result of these events. Elevating structures will reduce the recovery costs.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Levee around floodplain		Costly, not enough room.
	Deployable flood barriers		Requires deployment. Residents may not have adequate time to deploy, especially those who are elderly or disabled.

Action 2025-EastOttoT-06. Floodprone Roads

Lead Agency:	Highway Department		
Supporting Agencies:	Code Enforcement, Engineering, County Public Works		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	<p>Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:</p> <ul style="list-style-type: none"> • Hammond Hill Road • Utley Road • Swamp Road • Harvey Road • Traffic Street • Maynard Road • Mason Road • County Road 12 		
Description of the Solution:	<p>The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include:</p> <ul style="list-style-type: none"> • Elevation of roadways • Installation or improvement of drainage systems • Regrading of roadway and soils • Resurfacing or reshaping roadways 		
Estimated Cost:	TBD after mitigation technique is chosen		
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists

	Relocate all flood-prone road system	Not feasible
	Raise all flood prone roads	Cost prohibitive

DRAFT

Action 2025-EastOttoT-07. Undersized Culverts

Lead Agency:	Highway										
Supporting Agencies:	Code Enforcement, Engineer										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters including culverts located on the following roads: <ul style="list-style-type: none">• Traffic Street• Maynard Road										
Description of the Solution:	The Town Engineer will complete an engineering survey of the culverts in Town that are undersized and contribute to flooding to determine the proper size necessary to provide stormwater capacity. The Town Highway Department will complete the necessary upsizing for the culverts.										
Estimated Cost:	TBD after study is complete										
Potential Funding Sources:	FEMA HMA, CHIPS, Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4										
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.										
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.										
Impact on Capabilities:	Identifying the culverts that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes culvert sizes to meet changing stormwater needs as the result of climate change.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Remove roadway</td><td>Roadway cannot be removed</td></tr><tr><td>Raingardens</td><td>Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Remove roadway	Roadway cannot be removed	Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.		
Action	Evaluation										
No Action	Current problem exists										
Remove roadway	Roadway cannot be removed										
Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.										

Action 2025-EastOttoT-08. Dam Owner Partnership

Lead Agency:	Town Board										
Supporting Agencies:	NYS DEC, Dam Owners										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Town has dams within its jurisdiction. Despite not being high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.										
Description of the Solution:	The Town will work with the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3										
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within for those living near areas where the dams are located.										
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Town will be unaware of any safety concerns for the dam or its condition</td> </tr> <tr> <td>Utilize information from NYS DEC</td> <td>Owners may not be required to submit a safety plan to the State</td> </tr> <tr> <td>Utilize information from the National Inventory of Dams</td> <td>Not all dams are listed on the inventory</td> </tr> </tbody> </table>		Action	Evaluation	No Action	Town will be unaware of any safety concerns for the dam or its condition	Utilize information from NYS DEC	Owners may not be required to submit a safety plan to the State	Utilize information from the National Inventory of Dams	Not all dams are listed on the inventory	
Action	Evaluation										
No Action	Town will be unaware of any safety concerns for the dam or its condition										
Utilize information from NYS DEC	Owners may not be required to submit a safety plan to the State										
Utilize information from the National Inventory of Dams	Not all dams are listed on the inventory										

Action 2025-EastOttoT-09. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Town</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-EastOttoT-10. Generators at Critical Facilities

Lead Agency:	Engineering		
Supporting Agencies:	Town Board		
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Town Hall, a designated emergency shelter, does not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.		
Description of the Solution:	The Town Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Town will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.		
Estimated Cost:	High		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4, 5		
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.		
Impact on Future Development:	This action results in protection of critical facilities that could support future development.		
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.		
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives	Action		Evaluation
	No Action		-
	Microgrid		Costly and difficult to implement.
	Solar panels and battery backup		Solar power is unlikely to be able to provide battery power for extended power failure events.

Action 2025-EastOttoT-11. Streambank Erosion

Lead Agency:	Engineering										
Supporting Agencies:	Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	In the Zoar Valley, the Connoisarauley Creek and Cattaraugus Creek have stream bank erosion issues, threatening encroachment onto nearby roads. Stream banks become eroded due to heavy rains from severe storms, degradation from flood waters and compacted snow and ice from severe winter storms. Stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements, should be considered to prevent flooding and potential landslide issues.										
Description of the Solution:	The Town Engineer will assess the feasibility and cost-effectiveness of various stabilization measures, such as including gabions, riprap, drainpipes and/or related improvements to prevent future flooding surrounding the Connoisarauley Creek and Cattaraugus Creek.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, Town Budget, NYS DEC										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2										
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage to properties.										
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.										
Impact on Future Development:	Future development surrounding the Connoisarauley Creek and Cattaraugus Creek will have its risk of flood impacts reduced.										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. These events can lead to an influx of water, resulting in flooding conditions.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Elevate nearby roads</td><td>Cost prohibitive</td></tr><tr><td>Acquire all properties which flood</td><td>Cost prohibitive</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Elevate nearby roads	Cost prohibitive	Acquire all properties which flood	Cost prohibitive
Action	Evaluation										
No Action	Current problem exists										
Elevate nearby roads	Cost prohibitive										
Acquire all properties which flood	Cost prohibitive										

Action 2025-EastOttoT-12. Salt and Sand Storage Shed

Lead Agency:	Highway Department										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Open air storage of salt and sand leads to loss of materials from erosion and leaching. These materials exposed to heavy rains, snowfalls, and flooding conditions negatively impacts the environment and disrupts natural ecosystems. The loss of materials can result in the reduction in effectiveness of mitigating impacts from severe winter storms, as salt and sand is utilized to minimize potential risks on roadways, including ice and snow.										
Description of the Solution:	Construct a shed to house bulk salt and sand storage. The construction of this shed will reduce loss of material to erosion and leaching from rain and snow melt and ensure that there are enough critical materials for roadway treatment during storms.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Town Budget										
Implementation Timeline:	Within 2 years										
Goals Met:	1, 4, 5										
Benefits:	This action will support the continuity of operations for the critical services within the Town, including the Highway Department and first responders. The Highway Department will maintain its capability to provide road treatments in time of need, ensuring roads are accessible for first responders and regular travelers.										
Impact on Socially Vulnerable Populations:	Vulnerable populations will have access to maintained roads, ensuring safe travel,										
Impact on Future Development:	Individuals living within future development in the Town will have access to safe, treated roadways.										
Impact on Critical Facilities/Lifelines:	The construction of this structure will enhance the transportation lifeline by ensuring roads are safe to traverse during severe winter storms. Furthermore, it will create an additional critical facility.										
Impact on Capabilities:	This action will ensure the Highway Department is able to maintain its capabilities.										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. These events would further expose materials stored outside to the elements, degrading not just the materials, but pushing them into the environment, potentially disrupting the ecosystem.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Install underground salt and sand facility</td><td>Not feasible</td></tr><tr><td>Share a facility with another municipality</td><td>Administratively burdensome</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Install underground salt and sand facility	Not feasible	Share a facility with another municipality	Administratively burdensome
Action	Evaluation

Share a facility with another municipality	Administratively burdensome										

Action 2025-EastOttoT-13. Comprehensive Emergency Management Plan Update

Lead Agency:	Town Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Town will update the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Town will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Town will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Town to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Town performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped										

Action 2025-EastOttoT-14. Pandemic Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)

Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-EastOttoT-15. Bridge Evaluations

Lead Agency:	Highway Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none">• East Otto 26• East Otto 27• East Otto 29• East Otto 30										
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

13. TOWN OF ELLICOTTVILLE

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Ellicottville with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Ellicottville, describes who participated in the planning process, assesses Ellicottville's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

13.1 HAZARD MITIGATION PLANNING TEAM

The Town of Ellicottville identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Town Planner represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 13-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Name/Title: Jesse Klahn, Water Division Supervisor. Method of Participation: Review meetings and site visits.	

13.2 COMMUNITY PROFILE

The Town of Ellicottville lies in the northcentral part of Cattaraugus County in western New York State. The town has a total area of 45 square miles. The Town of Ellicottville is bordered by the Town of Ashford to the north, the Town of Machias to the northeast, the Town of Franklinville to the east, the Town of Great Valley to the south, the Town of Mansfield to the west, and the Town of East Otto to the northwest. There are two hamlets located within

the town, Plato, and Ashford Junction. The following creeks flow through the town: Great Valley, Connoisarauley, Beaver Meadows, Elk, Bryant Hill, and McMurray.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 1.3 percent of the population is 5 years of age or younger, 33.1 percent is 65 years of age or older, 0 percent is non-English speaking, 12 percent is below the poverty threshold, and 7.3 percent is considered disabled.

13.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Ellicottville performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Ellicottville to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

13.3.1 Planning and Regulatory Capability and Integration

Table 13-2 summarizes the planning and regulatory tools that are available to Ellicottville.

Table 13-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 2, 2005: Enforcement of the New York State Uniform Fire Prevention and Building Code	State and Local	Code Enforcement Official

How has or will this be integrated with the HMP and how does this reduce risk?

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------------	--	---	---

This local law shall provide for administration and enforcement of the New York State Uniform Fire Prevention and Building code (Uniform Code) in the Town of Ellicottville. This local law is adopted pursuant to Section 10 of Article 2 of the Municipal Home Rule Law. Except as otherwise provided within this law, state law, or within the Uniform Code, all premises, regardless of use, are subject to the provisions which follow.

Zoning/Land Use Code	Yes	Local Law 3, 2009: Town of Ellicottville Zoning Law	Local	Zoning Official
-----------------------------	-----	---	-------	-----------------

How has or will this be integrated with the HMP and how does this reduce risk?

This Code is designed and enacted to implement the objectives of the Town of Ellicottville Comprehensive Plan and to promote the general health and welfare of the present and future inhabitants of the Town, and to protect property values of the Town and the neighborhoods within the Town and to create an atmosphere attractive to visitors and residents. It is the intention of the Town in adopting this Code to fully exercise all the powers granted to the Town by the provisions of New York State law, and all other powers granted by statute or by common law for the regulation of land uses and improvements. The intention of the Town is to assure the proper and sensitive development of land within Ellicottville in order to protect and enhance the quality of life in general. This Code is intended to allow development in a manner that encourages the preservation of scenic values, historic structures, and the unique urban scale of original Ellicottville, and provides for well-planned commercial and residential centers, smooth traffic circulation, and efficient delivery of municipal services. This Code seeks to prevent development that adds to existing geologic hazards, erosion, flooding, or other conditions that create potential dangers to life and safety of the community or detract from the quality of life in the community.

Subdivision Code	Yes	Local Law 1, 2012: Subdivision Regulations	Local	Planning Board
-------------------------	-----	--	-------	----------------

How has or will this be integrated with the HMP and how does this reduce risk?

The purpose of these regulations as herein adopted shall be to provide for the orderly growth and development of the town with adequate provision for the housing, transportation, distribution, comfort, convenience, safety, health, desirable environment, and welfare of its population.

Site Plan Code	Yes	Local Law 3, 2009: Town of Ellicottville Zoning Law, Article 7	Local	Planning Board
-----------------------	-----	--	-------	----------------

How has or will this be integrated with the HMP and how does this reduce risk?

The purpose of this Article is to ensure that any new development, substantial redevelopment, special permitted use or change in use in the Town of Ellicottville is in harmony with the character of the town. Another purpose is to minimize conflicts between future development and neighboring existing uses and natural features of the site; this will minimize any potential adverse effects to the health, safety, and general welfare of the residents of the Town of Ellicottville.

Stormwater Management Code	Yes	Local Law 1, 2012: Subdivision Regulations, Section 3.3	Local	Planning Board
-----------------------------------	-----	---	-------	----------------

How has or will this be integrated with the HMP and how does this reduce risk?

To the maximum extent feasible, a site shall be laid out to maintain the natural drainage features of the site. Site grading shall be designed such that the rate and direction of stormwater flow off site does not increase onto adjacent properties or onto the town's right of way in an uncontrolled manner. The overall development plan for the subdivision shall take into account the need to control and receive runoff from the individual lots as they are developed. The design of stormwater management facilities shall assure that the runoff after development does not exceed that existing at the time of the plan submission.

Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
--	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent

How has or will this be integrated with the HMP and how does this reduce risk?

In addition to facing potential liability for failing to disclose under the exceptions to “caveat emptor,” a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.

Growth Management	No	-	-	-
--------------------------	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Environmental Protection Ordinance(s)	Yes	Local Law 3, 2009: Town of Ellicottville Zoning Law, Section 12.6, 12.10, 12.16	Local	Planning Board
--	-----	---	-------	----------------

How has or will this be integrated with the HMP and how does this reduce risk?

Section 12.6 Landscaping Regulations: The purpose and intent of this Section is to conserve and stabilize property values and to otherwise facilitate the creation of a convenient, attractive and harmonious community, and a healthful and pleasant environment by requiring the landscaping of all developments including off-street parking and loading areas; establish minimum standards and criteria for the landscaping of all nonresidential developments, to prevent the unnecessary clearing and disturbing of land and trees, to preserve the natural and existing growth of flora, and to replace removed flora or place new flora indigenous to the Western New York region; relieve the stark, congested and paved appearance of commercial and industrial areas, and reduce the effects of traffic noise and glare; provide unpaved areas for the absorption of surface waters and to prevent soil erosion; reduce the level of carbon dioxide and return pure oxygen to the atmosphere.

Section 12.10 Property in Excess of 25% in Slope: Construction of any public or private roadways, access, or streets on slopes in excess of 25% shall be discouraged. In circumstances that are compelling, the Planning Board may approve construction of such roadways, for a distance not to exceed 125 feet, if it is necessary to cross an area of land with a slope in excess of 25% in order to access an otherwise inaccessible area of land which has a slope less than 25%. In no case shall a structure (residential or non-residential) be constructed on ground which has a slope in excess of 25% if the roadway which is serving the structure is on ground in excess of 20% in slope.

Section 12.16 Hillside Development: Development on hillsides poses special problems which may result in potential hazards to the health, safety and welfare of the residents of the Town of Ellicottville. Hillside development may cause an increase in erosion. Steep road grades may result in difficult access for emergency vehicles. Development on steep slopes can also be aesthetically unsightly, due to areas of large cut and fill and the necessity for large retaining walls, which conflict with the natural, vegetated character of the community. Furthermore, large areas of cut and fill may be unstable unless suitably engineered. For all these reasons, development on hillsides requires special regulation to prevent these adverse impacts.

Flood Damage Prevention Ordinance	Yes	Local Law 1, 2015: Flood Damage Prevention	Federal, State, County and Local	Ellicottville
--	-----	--	----------------------------------	---------------

How has or will this be integrated with the HMP and how does this reduce risk?

It is the purpose of this local law to promote public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas s by provisions designed to:

- A. Regulate uses which are dangerous to health, safety and property due to water or erosion hazards or which result in damaging increases in erosion or in flood heights or velocities.
- B. Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction.
- C. Control the alteration of natural floodplains, stream channels and natural protective barriers which are involved in the accommodation of floodwaters.
- D. Control filling, grading, dredging and other development which may increase erosion or flood damages.

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
E. Regulate the construction of flood barriers which will unnaturally divert floodwaters or which may increase flood hazards to other lands. F. Qualify for and maintain participation in the National Flood Insurance Program.

PLANNING DOCUMENTS				
General/Comprehensive Plan	Yes	Comprehensive Plan, 2019	Local	Planning Board
How has or will this be integrated with the HMP and how does this reduce risk? The intent of the Plan is to balance preservation of the rural character of the community and protection of the environment, while at the same time fostering and encouraging appropriate development. The primary objective of this Plan is to formulate public policy for the effective and harmonious physical, economic, and social development of the Town. The Plan seeks to promote the public health, safety, convenience, and general welfare of the community. In doing so, the Plan seeks to foster a proper balance among diverse requirements. Hence, it takes into consideration community need, physical and economic constraints to development, goals of the community, and the natural and manmade environment. This Plan is expected to serve as a guide and framework for development for the next decade. The overarching purpose of the Plan is to provide a rational basis for public policies and decision-making and to encourage orderly development and land use change that is in accordance with the policies contained within this document. This Plan will also serve as the basis for developing future amendments to the Town's zoning ordinance and other land use regulations.				
Capital Improvement Plan	Yes	Capital Improvement Plan	Local	Administration
How has or will this be integrated with the HMP and how does this reduce risk? Entities will submit desired capital projects with project titles, descriptions, and anticipated costs. The submitted projects may include those with relevance to hazard mitigation, including stormwater management or making facilities more sustainable.				
Disaster Debris Management Plan	Yes	Disaster Debris Management Plan	County	County OES
How has or will this be integrated with the HMP and how does this reduce risk? The plan establishes procedures and guidelines for managing disaster debris in a coordinated, environmentally responsible, and cost-effective manner.				
Floodplain Management or Watershed Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency

13.3.2 Development and Permitting Capability

Table 13-3 summarizes the capabilities of Ellicottville to oversee and track development.

Table 13-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits? <ul style="list-style-type: none">If you issue development permits, what department is responsible?If you do not issue development permits, what is your process for tracking new development?	Yes	Code Enforcement
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	Floodplain
Do you have a buildable land inventory? <ul style="list-style-type: none">If you have a buildable land inventory, please describe	Yes	Located within the Town's Comprehensive Plan
Describe the level of buildout in your jurisdiction.	N/A	According to the Town's 2019 Comprehensive Plan, 45.62 percent of the Town's land is identified as Vacant and may be available for future development.

13.3.3 Administrative and Technical Capability

Table 13-4 summarizes potential staff and personnel resources available to Ellicottville and their current responsibilities that contribute to hazard mitigation.

Table 13-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	The Planning Board has the authority to make investigations, maps, reports and recommendations relating to the planning and development of the Town; reviews and approves all applications for special use permits, site plan review, master plan developments and amendments to the zoning ordinance; reviews and approves all applications for subdivisions under the provisions of the Town of Ellicottville subdivision regulations. The Planning Board makes recommendations to the Town Board on any proposed Town comprehensive plan or zoning amendments.

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Zoning Board of Adjustment	Yes	The Zoning Board of Appeals shall have the power and authority to after a public hearing, approve, approve with conditions, or deny each application for a use or area variance; hear and determine appeals from and review any order, requirement, decision or determination made by the Zoning Official; after a hearing, revoke any decision to grant a variance, if the current owner or operator fails to comply with any conditions of approval of the original application; prescribe rules for the conduct of its affairs and forms for the submission of applications for its consideration; call upon any department, agency, employee of or consultant to the Town for such assistance as shall be deemed necessary and as shall be authorized by the Town Board.
Planning Department	Yes	The Town employees EVL Engineering to perform Planning Department activities.
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	The Town Highway Division is responsible for the maintenance, operation, and improvement of the Town of Ellicottville's 55 miles of roadways. The Town Highway department keeps roadways safe by patching and re-paving our roads, plowing snow in the winter, and repairing and/or replacing storm drainage structures throughout the Town.
Construction/Building/Code Enforcement Department	Yes	The Town employees EVL Engineering to perform Code Enforcement activities.
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	Yes	The Town Highway Division is responsible for the maintenance, operation, and improvement of the Town of Ellicottville's 55 miles of roadways. The Town Highway department keeps roadways safe by patching and re-paving our roads, plowing snow in the winter, and repairing and/or replacing storm drainage structures throughout the Town.
Mutual aid agreements	Yes	With multiple communities for emergency response
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	Yes	Planning Board

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Engineers or professionals trained in building or infrastructure construction practices	Yes	Engineer/CEO
Planners or engineers with an understanding of natural hazards	Yes	Engineer/Planner
Staff with expertise or training in benefit/cost analysis	Yes	Engineer/Planner
Professionals trained in conducting damage assessments	Yes	Engineer
Personnel skilled or trained in GIS and/or Hazus applications	Yes	Engineer/Planner
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	Yes	Planner
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

13.3.4 Fiscal Capability

Table 13-5 summarizes financial resources available to Ellicottville.

Table 13-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	Yes
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	Yes
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

13.3.5 Education and Outreach Capability

Table 13-6 summarizes the education and outreach resources available to Ellicottville.

Table 13-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	No	-
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	Yes	Website
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	Yes	NY-Alert, County system
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

13.3.6 Community Classifications

Table 13-7 summarizes classifications for community programs available to Ellicottville.

Table 13-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

13.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future

conditions, and changing risk. Table 13-8 summarizes the adaptive capacity for each identified hazard of concern and the Town's capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 13-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Interruption	Moderate
Wildfire	Moderate

13.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 13-1 is responsible for maintaining this information.

13.4.1 NFIP Statistics

Table 13-9 summarizes the NFIP policy and claim statistics for Ellicottville.

Table 13-9. Ellicottville NFIP Summary of Policy and Claim Statistics

# Policies	24
# Claims (Losses)	6
Total Loss Payments	\$43,067.23
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

13.4.2 Flood Vulnerability Summary

Table 13-10 provides a summary of the NFIP program in Ellicottville.

Table 13-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Areas with residences and/or commercial structures located within floodplain zone AE.
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Unknown
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Cost to restore a structure in the SFHA to pre-damage condition equals or exceeds 50 percent of the market value of the structure before damage occurred.
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	None
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	Yes, CFM training and certification

NFIP Topic	Comments
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit reviews, education and outreach to applicants, inspections.
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Cost to rebuild or improve a structure in the SFHA, whether damaged or not, is equal to or more than 50 percent of the market value of structure prior to work.
What are the barriers to running an effective NFIP program in the community, if any?	Lack of education and support.
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	Yes, garage built in floodplain without proper flood vent installation.
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: April 12, 2005 CAV: October 1, 2020
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 1, 2015: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	March 17, 2015
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Yes, Planning and Zoning boards take floodplain into consideration.
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

13.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 13-11 through Table 13-13.

Table 13-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	4	2	0	6
Permits within SFHA	0	0	0	0
2020				
Total Permits	4	0	0	4
Permits within SFHA	0	0	0	0
2021				
Total Permits	10	2	0	12

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
Permits within SFHA	0	0	0	0
2022				
Total Permits	10	2	0	12
Permits within SFHA	0	0	0	0
2023				
Total Permits	9	1	0	10
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 13-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

There has been no recent major development or infrastructure between 2019 to present.

* Only location-specific hazard zones or vulnerabilities identified.

Table 13-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
------------------------------	---------------------	-------------------------	---	---------------------	-------------------------------------

There are no known or anticipated major development or infrastructure in the next five years.

13.6 JURISDICTIONAL RISK ASSESSMENT

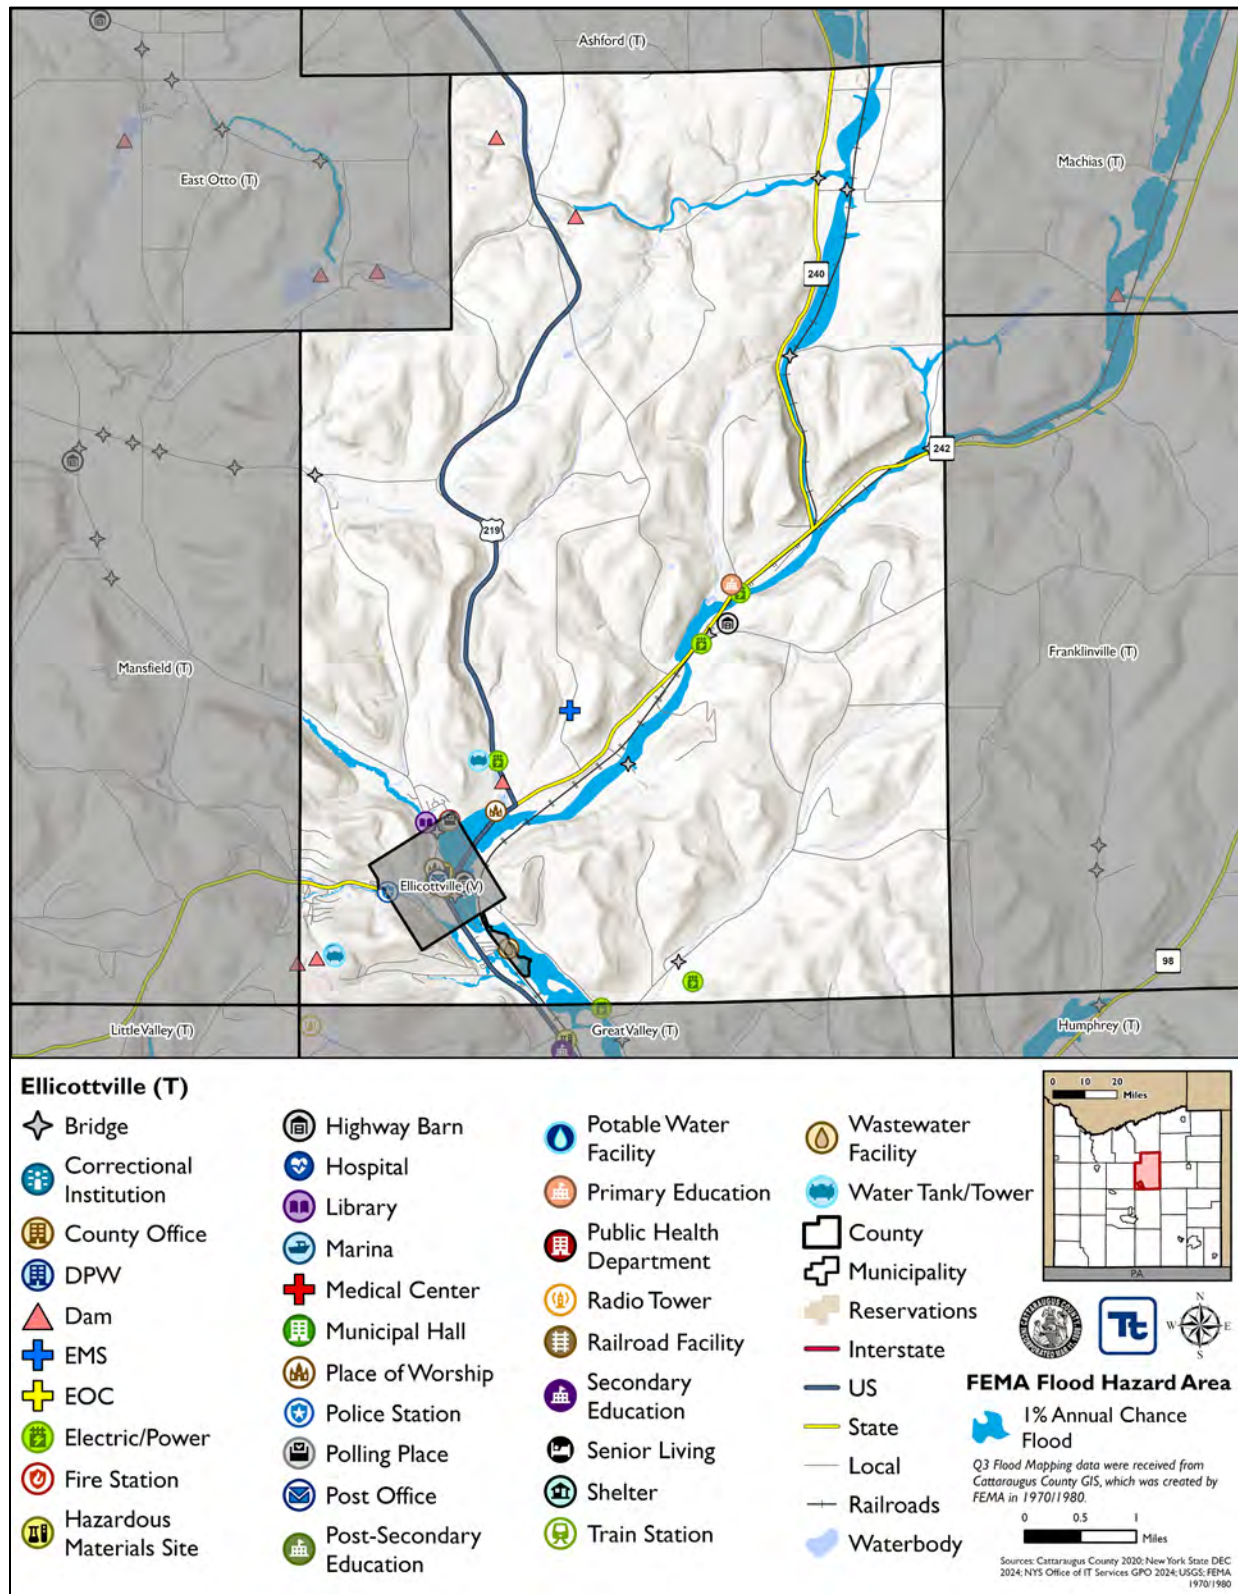

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Ellicottville's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

13.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 13-1 through Figure 13-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Ellicottville has significant exposure. The maps show the location of potential new development, where available.

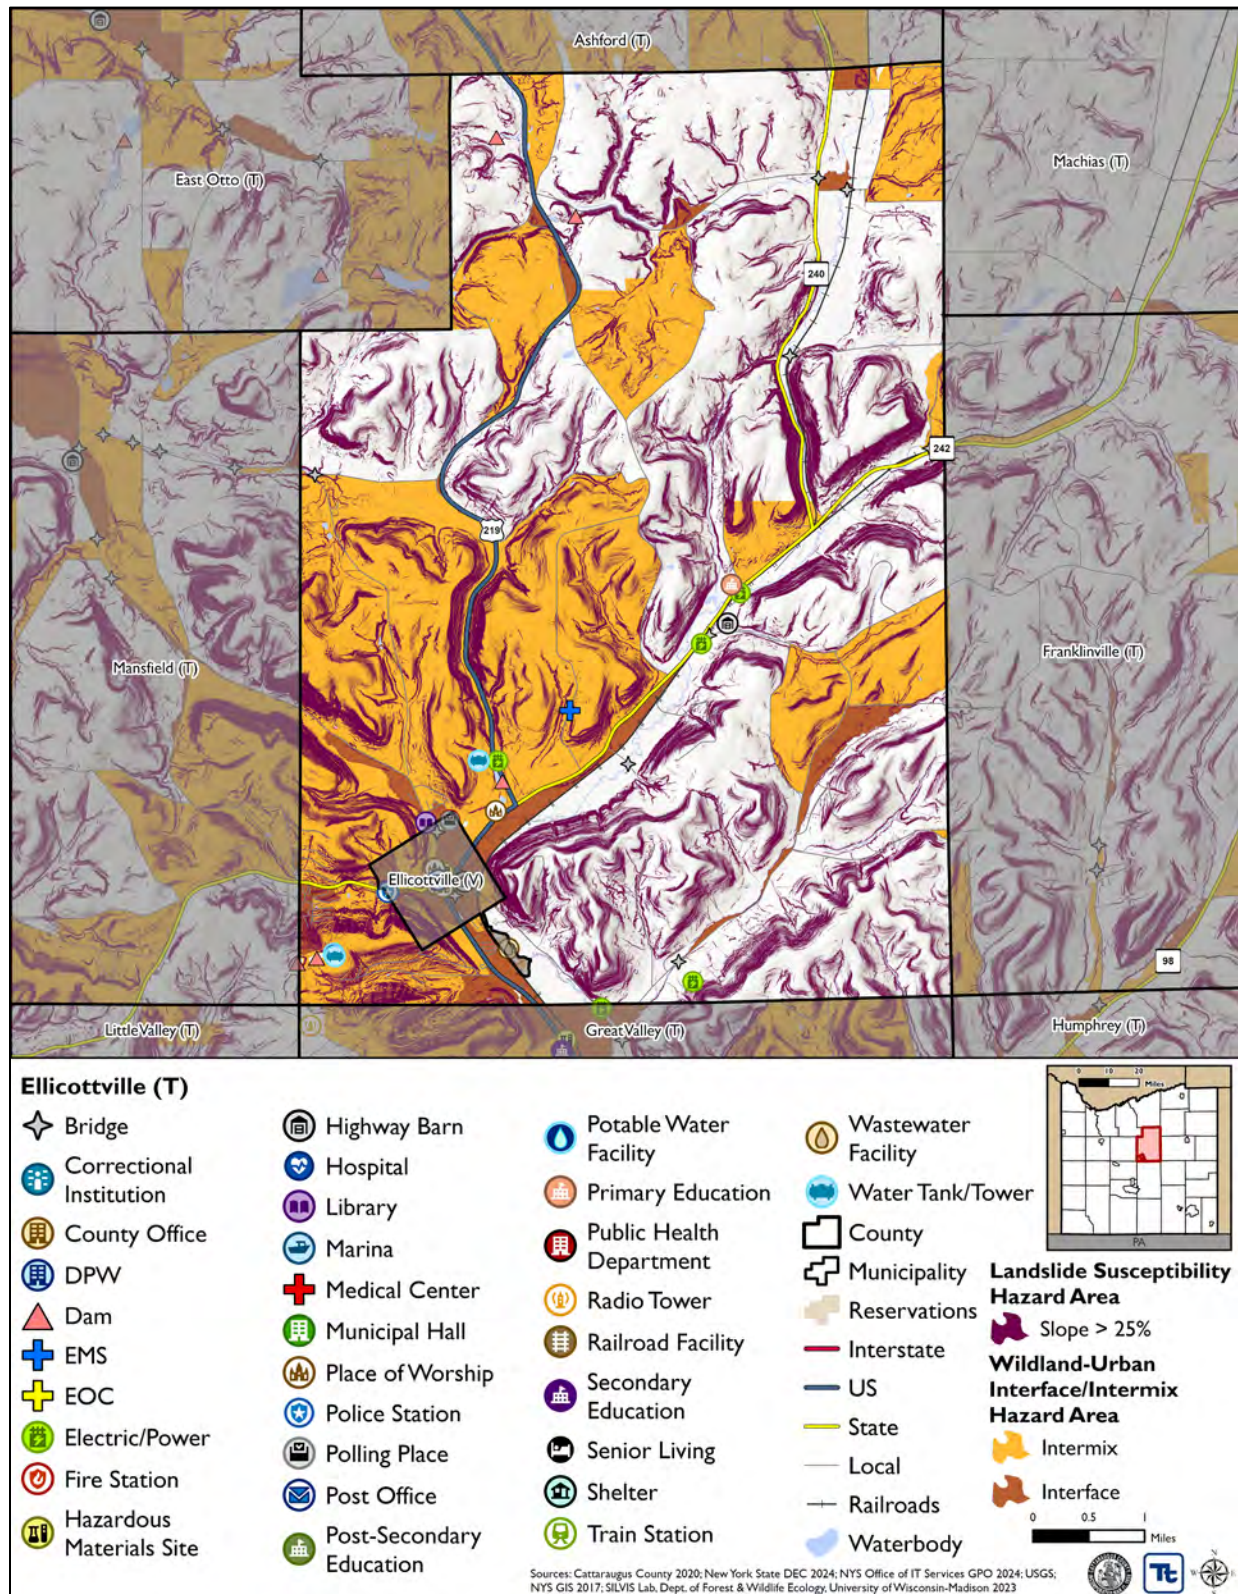

Figure 13-1. Ellicottville Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 13-2. Ellicottville Landslide and Wildfire Hazard Area Extent and Location Map

13.6.2 Hazard Event History

The history of natural and non-natural hazard events in Ellicottville is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 13-14 provides details on loss and damage in Ellicottville during hazard events since the last hazard mitigation plan update.

Table 13-14. Hazard Event History in Ellicottville

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Ellicottville
October 31- November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town adhered to the COVID-19 guidelines, with individuals working from home or practicing social distancing.
January 12, 2020	High Wind	N/A	High wind	The Town did not incur damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	Trees down, but no damage to property.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur damage or losses.
March 6, 2022	High Wind	N/A	High wind	The Town did not incur damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	Trees down, but no damage to property.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	Highway Department snow removal.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

13.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Ellicottville.

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Ellicottville reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town agreed with the preliminary rankings.

Table 13-15 shows Ellicottville's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 13-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Medium
Flood	Medium
Landslide	High
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Low

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 13-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 13-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event

Source: Cattaraugus County 2024

In addition to critical facilities that are exposed to flooding, the following high hazard dam is located in Ellicottville:

- Tannenbaum Reservoir Dam

13.6.4 Identified Issues

After a review of Ellicottville's hazard event history, hazard rankings, hazard location, and current capabilities, Ellicottville identified the following vulnerabilities within the community:

- Ellicottville Memorial Library, St Paul Lutheran Church, and Niagara Mohawk Power Corporation are located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.
- Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters including culverts located on the following roads:
 - 7075 Irish Hill Road
 - 6705 Poverty Hill Road
 - 7000 Irish Hill Road
 - 6694 Poverty Hill Road
 - 7500 Poverty Hill Road
 - 6679 Linberg Road
 - 6521 Somerville Valley Road
 - 6460 Witch Hollow Road
 - 7092 Crane Road
 - 5190 Heffri Road
- The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing

a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.

- Critical facilities require backup power to ensure continuity of operations. The Town Hall, Town Center, and the Highway Garage Facilities, do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:
 - Sommerville Valley Road area/valley (ice jam potential)
 - Lower Cotter Road, Lindburg Road
 - Southeast area of the Village (along Elk Creek near the Tops grocery store)
 - Route 219
 - Route 242 into the Village of Ellicottville
- Tannenbaum Reservoir Dam is a Class I High Hazard Dam that is located on the Spruce Lake. The dam is owned by the Win-Sum Ski Corporation. Failure of the dam could result in inundation of residential properties, woodland areas, agricultural and rural lands, and transportation routes including Multon Hollow Road. Although the dam was last inspected in 2023, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.
- The Town has several dams within its jurisdiction, including one high-hazard potential dam. These structures have the potential to impact the people, property, infrastructure, and environment nearby.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The Town does not have an inventory of roads which may be impacted by landslides.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Ellicottville 10
 - Ellicottville 39
 - Ellicottville 48
 - Ellicottville 49
 - Ellicottville 50

13.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

13.7.1 Past Mitigation Action Status

Table 13-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

13.7.2 Additional Mitigation Efforts

Ellicottville did not identify any additional mitigation efforts completed since the last HMP.

DRAFT

Table 13-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Town of Ellicottville-001	Floodplain Outreach	Flood	FPA	<p>Problem: The St Paul Lutheran Church is located at NYS Rte 242 E. The facility is located in the Special Flood Hazard Area. The facility is privately owned. The Sun-Up Holiday Mobile Home Park is also located in the special flood hazard area</p> <p>Solution: The FPA will conduct outreach to the facility managers to discuss flood exposure and potential mitigation actions.</p>	<p>1. No Progress</p> <p>2. Limited staffing and financial resources.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Town of Ellicottville-002	Flood Study	Flood	Engineer, Village of Ellicottville	<p>Problem: Sommerville Valley Road area/valley (ice jam potential), Lower Cotter Road, Lindburg Road, and the southeast area of the Village (along Elk Creek near the Tops grocery store) are areas prone to flooding</p> <p>Solution: The Town and Village of Ellicottville will conduct a feasibility study to determine the cause and extent of flooding. The town and village will then identify potential actions that can be taken to reduce flood risk</p>	<p>1. No Progress</p> <p>2. Limited staffing and financial resources.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>
2020-Town of Ellicottville-003	Route 219 and 242 Flood Protection	Flood	Engineer	<p>Problem: Route 219 and Route 242 into the Village of Ellicottville (if the village floods, there are very limited means of entrance</p>	<p>1. No Progress</p> <p>2. Limited staffing and financial resources.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. 2020-Town of Ellicottville-009	Culvert Upgrades	Flood, Severe Storm	Highway Department	<p>Problem: The following culverts are undersized and require replacement and upgrade:</p> <ul style="list-style-type: none">• 7075 Irish Hill• 6705 Poverty Hill• 7000 Irish Hill• 6694 Poverty Hill• 7500 Poverty Hill• 6679 Linberg• 6349 Cutter Road• 6521 Somerville Valley• 6460 Witch Hollow• 7092 Crane Road• 5190 Heffri Road <p>Solution: The town will replace and upsize the repetitively damaged/undersized culverts.</p>	<p>1. In Progress</p> <p>2. 6349 Cotter Road replaced in 2024. Design underway for 7092 Crane Road.</p>	<p>1. Include</p> <p>2. Remove 6349 Cotter Road</p> <p>3. Not applicable</p>
2020-Town of Ellicottville-010	Ellicottville Memorial Library	Flood	FPA	<p>Problem: Ellicottville Memorial Library is located in the Special Flood Hazard Area. The library is not municipally owned.</p> <p>Solution: The FPA will conduct outreach to the facility manager to discuss flood exposure and potential mitigation actions</p>	<p>1. No Progress</p> <p>2. Limited staffing and financial resources.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

13.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Ellicottville participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Ellicottville would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 13-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 13-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 13-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA					CRS

Flood	X	X			X				X	X
Landslide	X				X					
Pandemic				X			X			
Severe Storm	X	X			X				X	X
Severe Winter Storm	X	X			X				X	X
Utility Failure	X	X							X	X
Wildfire				X			X			

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 13-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-EllicottvilleT-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-EllicottvilleT-02	Undersized Culverts	1	1	1	1	1	0	1	0	1	1	1	1	1	0	11	High
2025-EllicottvilleT-03	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-EllicottvilleT-04	Pandemic Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-EllicottvilleT-05	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-EllicottvilleT-06	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-EllicottvilleT-07	Tannenbaum Reservoir Dam Rehab	1	1	1	1	0	0	1	1	1	0	1	1	1	1	11	High
2025-EllicottvilleT-08	Dam Owner Partnership	1	1	1	1	1	1	0	1	1	0	1	1	1	0	11	High
2025-EllicottvilleT-09	Landslide Prone Roads Inventory	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-EllicottvilleT-10	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-EllicottvilleT-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Ellicottville Memorial Library, St Paul Lutheran Church, and Niagara Mohawk Power Corporation are located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.										
Description of the Solution:	<p>The Town will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. The Town will work with facility managers to identify the most effect flood mitigation methods. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the Town will carry out the option.</p>										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget										
Implementation Timeline:	Within 5 Years										
Goals Met:	1, 3, 5										
Benefits:	Ensures continuity of operations of several critical facilities in the Town.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.										
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.										
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.										
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.										
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facility</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr><tr><td>Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events</td><td>Reduction in response times and delay of critical services in the immediate area.</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.		
Action	Evaluation										
No Action	Current problem exists										
Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area										
Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.										

Action 2025-EllicottvilleT-02. Undersized Culverts

Lead Agency:	Highway		
Supporting Agencies:	Code Enforcement, Engineer		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	<p>Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter winters including culverts located on the following roads:</p> <ul style="list-style-type: none">• 7075 Irish Hill Road• 6705 Poverty Hill Road• 7000 Irish Hill Road• 6694 Poverty Hill Road• 7500 Poverty Hill Road• 6679 Linberg Road• 6521 Somerville Valley Road• 6460 Witch Hollow Road• 7092 Crane Road• 5190 Heffri Road		
Description of the Solution:	The Town Engineer will complete an engineering survey of the culverts in Town that are undersized and contribute to flooding to determine the proper size necessary to provide stormwater capacity. The Town Highway Department will complete the necessary upsizing for the culverts.		
Estimated Cost:	TBD after study is complete		
Potential Funding Sources:	FEMA HMA, CHIPS, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.		
Impact on Capabilities:	Identifying the culverts that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes culvert sizes to meet changing stormwater needs as the result of climate change.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists

	Remove roadway	Roadway cannot be removed
	Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.

DRAFT

Action 2025-EllicottvilleT-03. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)

Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-EllicottvilleT-04. Pandemic Education and Outreach

Lead Agency:	Town Supervisor		
Supporting Agencies:	Town Board, Cattaraugus County		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.		
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	1 year		
Goals Met:	1, 2, 3, 4		
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.		
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.		
Impact on Future Development:	Not applicable		
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.		
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.		
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action	Evaluation	
	No Action	Current problem exists	
	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	
	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance	

Action 2025-EllicottvilleT-05. Generators at Critical Facilities

Lead Agency:	Engineering		
Supporting Agencies:	Town Board, Highway Department		
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Town Hall, Town Center, and the Highway Garage Facilities, do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at the critical facility. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.		
Description of the Solution:	The Town Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Town will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.		
Estimated Cost:	High		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4, 5		
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.		
Impact on Future Development:	This action results in protection of critical facilities that could support future development.		
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.		
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives	Action		Evaluation
	No Action		-
	Microgrid		Costly and difficult to implement.
	Solar panels and battery backup		Solar power is unlikely to be able to provide battery power for extended power failure events.

Action 2025-EllicottvilleT-06. Floodprone Roads

Lead Agency:	Highway Department										
Supporting Agencies:	Code Enforcement, Engineering, Village of Ellicottville										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including: <ul style="list-style-type: none"> • Sommerville Valley Road area/valley (ice jam potential) • Lower Cotter Road, Lindburg Road • Southeast area of the Village (along Elk Creek near the Tops grocery store) • Route 219 • Route 242 into the Village of Ellicottville 										
Description of the Solution:	The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include: <ul style="list-style-type: none"> • Elevation of roadways • Installation or improvement of drainage systems • Regrading of roadway and soils • Resurfacing or reshaping roadways 										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Relocate all flood-prone road system</td> <td>Not feasible</td> </tr> <tr> <td>Raise all flood prone roads</td> <td>Cost prohibitive</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Relocate all flood-prone road system	Not feasible	Raise all flood prone roads	Cost prohibitive
Action	Evaluation										
No Action	Current problem exists										
Relocate all flood-prone road system	Not feasible										
Raise all flood prone roads	Cost prohibitive										

Action 2025-EllicottvilleT-07. Tannenbaum Reservoir Dam Rehab

Lead Agency:	Win-Sum Ski Corporation										
Supporting Agencies:	County Engineer, County OES, NYDEC, Municipal Engineer										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Tannenbaum Reservoir Dam is a Class I High Hazard Dam that is located on the Spruce Lake. The dam is owned by the Win-Sum Ski Corporation. Failure of the dam could result in inundation of residential properties, woodland areas, agricultural and rural lands, and transportation routes including Multon Hollow Road. Although the dam was last inspected in 2023, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.										
Description of the Solution:	The Municipal Engineer will work with the Win-Sum Ski Corporation to complete an engineering study of Tannenbaum Reservoir Dam. The Town will also request information and input from its Highway department and the County regarding impacted roadways. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Town and the Win-Sum Ski Corporation will pursue funding support, permit approval from NYSDEC, and implement the cost-effective measures.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, HHPD										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3, 4, 6, 7										
Benefits:	This action will improve the safety and security of those who live within the dam inundation areas of the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within the Special Flood Hazard Area and inundation areas where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	Future development located in or near the dam inundation area will be further protected from a dam failure event.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event due to projected increases in precipitation. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Decommission Dam</td><td>High cost, flood risk for nearby infrastructure increased, loss of an environmental and recreational resource.</td></tr><tr><td>Elevate nearby structures</td><td>Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Decommission Dam	High cost, flood risk for nearby infrastructure increased, loss of an environmental and recreational resource.	Elevate nearby structures	Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions
Action	Evaluation										
No Action	Current problem exists										
Decommission Dam	High cost, flood risk for nearby infrastructure increased, loss of an environmental and recreational resource.										
Elevate nearby structures	Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions										

Action 2025-EllicottvilleT-08. Dam Owner Partnership

Lead Agency:	Town Board		
Supporting Agencies:	NYS DEC, Dam Owners		
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	The Town has several dams within its jurisdiction, including one high-hazard potential dam. These structures have the potential to impact the people, property, infrastructure, and environment nearby.		
Description of the Solution:	The Town will work with the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 2, 3		
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.		
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within for those living near areas where the dams are located.		
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.		
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.		
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.		
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Town will be unaware of any safety concerns for the dam or its condition
	Utilize information from NYS DEC		Owners may not be required to submit a safety plan to the State
	Utilize information from the National Inventory of Dams		Not all dams are listed on the inventory

Action 2025-EllicottvilleT-09. Landslide Prone Roads Inventory

Lead Agency:	Engineering										
Supporting Agencies:	Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The Town does not have an inventory of roads which may be impacted by landslides.										
Description of the Solution:	The Town Engineer will complete an assessment to identify roads in Town which have slopes at grades greater than 20 percent. Once identified, The Engineer will work with the Highway Department to prioritize roadways and identify possible mitigation measures.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	3 years										
Goals Met:	1, 4, 6										
Benefits:	This action will identify locations with steep grades (above 20 percent) and provide the Highway Department and Engineer with future locations to implement mitigation measures to protect any nearby property and infrastructure.										
Impact on Socially Vulnerable Populations:	This action may identify socially vulnerable populations whose properties may be at risk to the landslide hazard. If identified, the Town may educate the populations on how to mitigate potential risks.										
Impact on Future Development:	The identification of at-risk roads may lead to restrictions for future development.										
Impact on Critical Facilities/Lifelines:	This action has the potential to identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action may improve the Town's regulatory capabilities.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Town will be unaware of any safety concerns for the dam or its condition</td> </tr> <tr> <td>Do not use inventory to inform steep slopes ordinance</td> <td>Would not restrict future development, could increase at risk properties and structures</td> </tr> <tr> <td>Do not use inventory to inform future projects</td> <td>Risk would not be reduced</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Town will be unaware of any safety concerns for the dam or its condition	Do not use inventory to inform steep slopes ordinance	Would not restrict future development, could increase at risk properties and structures	Do not use inventory to inform future projects	Risk would not be reduced
Action	Evaluation										
No Action	Town will be unaware of any safety concerns for the dam or its condition										
Do not use inventory to inform steep slopes ordinance	Would not restrict future development, could increase at risk properties and structures										
Do not use inventory to inform future projects	Risk would not be reduced										

Action 2025-EllicottvilleT-10. Bridge Evaluations

Lead Agency:	Highway Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none"> • Ellicottville 10 • Ellicottville 39 • Ellicottville 48 • Ellicottville 49 • Ellicottville 50 										
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Remove bridges</td> <td>May cause significant traffic problems</td> </tr> <tr> <td>Replace bridges</td> <td>Cost prohibitive</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Remove bridges	May cause significant traffic problems	Replace bridges	Cost prohibitive
Action	Evaluation										
No Action	Current problem exists										
Remove bridges	May cause significant traffic problems										
Replace bridges	Cost prohibitive										

14. VILLAGE OF ELLICOTTVILLE

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Village of Ellicottville with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Ellicottville, describes who participated in the planning process, assesses Ellicottville's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

14.1 HAZARD MITIGATION PLANNING TEAM

The Village of Ellicottville identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Village departments. The Village Planner represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 14-1 summarizes Village officials who participated in the development of the annex and in what capacity. Additional documentation of the Village's planning activities through Steering Committee meetings is included in Volume I.

Table 14-1. Hazard Mitigation Planning Team

14.2 COMMUNITY PROFILE

The Village of Ellicottville lies in the southwest corner of the Town of Ellicottville. The village has a total area of 0.85 square miles. The village is bordered on all sides by the Town of Ellicottville. Elk Creek and Great Valley Creek flow through the village.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 15.6 percent of the population is 5 years of age or younger, 45.7 percent is 65 years of age or older, 0 percent is non-English speaking, 5.1 percent is below the poverty threshold, and 15.2 percent is considered disabled.

14.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Ellicottville performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Ellicottville to identify opportunities for integrating mitigation concepts into ongoing Village procedures.

14.3.1 Planning and Regulatory Capability and Integration

Table 14-2 summarizes the planning and regulatory tools that are available to Ellicottville.

Table 14-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------	--	---	--

CODES, ORDINANCES, & REGULATIONS

Building Code	Yes	Local Law 8, 2006: Enforcement of the New York State Uniform Fire Prevention and Building Code	State and Local	Code Enforcement Officer
----------------------	-----	--	-----------------	--------------------------

How has or will this be integrated with the HMP and how does this reduce risk?

This local law provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code) and the State Energy Conservation Construction Code (the Energy Code) in this Village. This local law is adopted pursuant to section 10 of the Municipal Home Rule Law. Except as otherwise provided in the Uniform Code, other state law, or other section of this local law, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions this local law.

Zoning/Land Use Code	Yes	Local Law 1, 2005: Zoning Local Law	Local	Village
-----------------------------	-----	-------------------------------------	-------	---------

How has or will this be integrated with the HMP and how does this reduce risk?

The Code is designed and enacted to implement the objectives of the Village of Ellicottville Comprehensive Plan and to promote the general health and welfare of the present and future inhabitants of the Village, and to protect property values of the Village and the neighborhoods within the Village and to create an atmosphere attractive to visitors and residents. It is the intention of the Village in adopting this Code to fully exercise all of the powers granted to the Village by the provisions of New York Law, and all other powers granted by statute or by common law for the regulation of land uses and improvements. The intention of the Village is to assure the proper and sensitive development of land within the Village of Ellicottville to protect and enhance the quality of life in general. The Code is intended to allow development in a manner that encourages the preservation of scenic values, historic structures, the unique urban scale of original Ellicottville, and provides for well-planned- commercial and residential centers, smooth traffic circulation, and efficient delivery of municipal services.

The Code seeks to prevent development that adds to existing geologic hazards, erosion, flooding, or other conditions that create potential dangers to life and safety in the community or detract from the quality of life in the community.

Subdivision Code	Yes	Local Law 2, 2011: Subdivision Regulations	Local	Village
-------------------------	-----	--	-------	---------

How has or will this be integrated with the HMP and how does this reduce risk?

The purpose of these regulations as herein adopted shall be to provide for the orderly growth and development of the Village with adequate provision for the housing, transportation, distribution, comfort, convenience, safety, health, and welfare of its population.

Site Plan Code	Yes	Local Law 1, 2005: Zoning Local Law, Section 6 Site Plan Review	Local	Village
-----------------------	-----	---	-------	---------

How has or will this be integrated with the HMP and how does this reduce risk?

An individual site plan is required for all permitted and special permitted uses in the Village of Ellicottville. The intent is to require Site Plan review for all new structures proposed for construction in the Village and all structures proposed for substantial improvement. Such proposals shall be subject to site plan review.

Historically, the Village has developed along the creeks and major roadways within the valley floor. However, as a result of demands for second home sites, development on hill sides has become more attractive. Along with hillside development comes special concerns regarding soil erosion, stormwater runoff, vegetative clearing and scenic views. The purpose of site plan review is to identify potential problems that may result from a building plan and to correct them before construction begins. In addition, Site Plan shall determine if a plan is compatible in scale or use with Village infrastructure and municipal services, and to encourage the preservation of historic structures within the District. Further, the purpose of this section is to ensure that any new development, substantial redevelopment or improvement, special permitted use or change in use in the Village of Ellicottville is in harmony with the character of the village. Another purpose is to minimize conflicts between future development and neighboring existing uses and natural

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
features of the site; this will minimize any potential adverse effects to the health, safety, and general welfare of the residents of the Village of Ellicottville.				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to "caveat emptor," a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.				
Growth Management	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Environmental Protection Ordinance(s)	Yes	Local Law 1, 2005: Zoning Local Law, Section 16.7	Local	Village
How has or will this be integrated with the HMP and how does this reduce risk? Construction of any public or private roadways, access or streets on slopes in excess of 15% shall be discouraged. In circumstances that are compelling, the Planning Board may approve construction of such roadways, for a distance not to exceed 125 feet, if it is necessary to cross an area of land with a slope in excess of 15% in order to access an otherwise inaccessible area of land which has a slope less than 15%. In no case shall a structure (residential or non-residential) be constructed on ground which has a slope in excess of 15% if the roadway which is serving the structure is on ground in excess of 15% slope.				
Flood Damage Prevention Ordinance	Yes	Local Law 3, 2014: Flood Damage Prevention	Local	Ellicottville
How has or will this be integrated with the HMP and how does this reduce risk? It is the purpose of this local law to promote the public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas by provisions designed to: (1) regulate uses which are dangerous to health, safety and property due to water or erosion hazards, or which result in damaging increases in erosion or in flood heights or velocities; (2) require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction; (3) control the alteration of natural floodplains, stream channels, and natural protective barriers which are involved in the accommodation of flood waters; (4) control filling, grading, dredging and other development which may increase erosion or flood damages; (5) regulate the construction of flood barriers which will unnaturally divert flood waters or which may increase flood hazards to other lands, and; (6) qualify and maintain for participation in the National Flood Insurance Program.

PLANNING DOCUMENTS				
General/Comprehensive Plan How has or will this be integrated with the HMP and how does this reduce risk? The purpose of this Comprehensive Plan project is to establish an overall guide for the future growth in the Village of Ellicottville. The plan is a policy document for the Village Board and Planning Board to utilize in making capital improvement and land use decisions. This plan allows for growth in a reasonable manner which is compatible with both its neighboring land uses and the community's physical, economic and social needs as a whole. It should balance growth against protecting the existing community character that has made Ellicottville what it is today.	Yes	Village of Ellicottville Comprehensive Plan September 2015	Local	Planning Board
Capital Improvement Plan How has or will this be integrated with the HMP and how does this reduce risk? Entities submit desired capital projects with project titles, descriptions, and anticipated costs. The submitted projects may include those with relevance to hazard mitigation, including stormwater management or making facilities more sustainable.	Yes	Capital Improvement Plan	Local	Administration

		elements related to steep slopes, creeks and flood plains.

14.3.3 Administrative and Technical Capability

Table 14-4 summarizes potential staff and personnel resources available to Ellicottville and their current responsibilities that contribute to hazard mitigation.

Table 14-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	Yes	The Planning Board has the authority to make investigations, maps, reports and recommendations relating to the planning and development of the Village; review and approve all applications for special use permits, site plan review, master plan developments and amendments to the zoning ordinance; review and approve all applications for subdivisions under the provisions of the Village of Ellicottville subdivision regulations. The Planning Board makes recommendations to the Village Board on any proposed Village comprehensive plan or zoning amendments.
Zoning Board of Adjustment	Yes	The Zoning Board of Appeals shall have the power and authority to after a public hearing, approve, approve with conditions, or deny each application for a use or area variance; hear and determine appeals from and review any order, requirement, decision or determination made by the Zoning Official; after a hearing, revoke any decision to grant a variance, if the current owner or operator fails to comply with any conditions of approval of the original application; prescribe rules for the conduct of its affairs and forms for the submission of applications for its consideration; call upon any department, agency, employee of or consultant to the Village for such assistance as shall be deemed necessary and as shall be authorized by the Village Board.
Planning Department	Yes	The Village employees EVL Engineering to perform Planning Department activities.
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	The Village Public Works Division is responsible for the roadways, storm drainage maintenance, overall utility maintenance, and park/land upkeep in the Village of Ellicottville.
Construction/Building/Code Enforcement Department	Yes	The Village employees EVL Engineering to perform Code Enforcement activities.

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	Yes	The Village Public Works Division is responsible for the roadways, storm drainage maintenance, overall utility maintenance, and park/land upkeep in the Village of Ellicottville.
Mutual aid agreements	Yes	With multiple communities for emergency response
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	Yes	Engineer, Planner
Engineers or professionals trained in building or infrastructure construction practices	Yes	Engineer, CEO
Planners or engineers with an understanding of natural hazards	Yes	Engineer, Planner
Staff with expertise or training in benefit/cost analysis	Yes	Engineer, Planner
Professionals trained in conducting damage assessments	Yes	Engineer
Personnel skilled or trained in GIS and/or Hazus applications	Yes	Engineer, Planner
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	Yes	Planner
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

14.3.4 Fiscal Capability

Table 14-5 summarizes financial resources available to Ellicottville.

Table 14-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	Yes
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	Yes
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

14.3.5 Education and Outreach Capability

Table 14-6 summarizes the education and outreach resources available to Ellicottville.

Table 14-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	No	-
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	Yes	Website
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	Yes	NY-Alert, County system
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	Yes	Website

14.3.6 Community Classifications

Table 14-7 summarizes classifications for community programs available to Ellicottville.

Table 14-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service Storm Ready Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

14.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 14-8 summarizes the adaptive capacity for each identified hazard of concern and the Village’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 14-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Interruption	Moderate
Wildfire	Moderate

14.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 14-1 is responsible for maintaining this information.

14.4.1 NFIP Statistics

Table 14-9 summarizes the NFIP policy and claim statistics for Ellicottville.

Table 14-9. Ellicottville NFIP Summary of Policy and Claim Statistics

# Policies	23
# Claims (Losses)	22
Total Loss Payments	\$108,201.99
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

14.4.2 Flood Vulnerability Summary

Table 14-10 provides a summary of the NFIP program in Ellicottville.

Table 14-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Areas with residences and/or commercial structures located within floodplain zone AE.
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Unknown
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Cost to restore a structure in the SFHA to pre-damage condition equals or exceeds 50 percent of the market value of the structure before damage occurred.
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	None

NFIP Topic	Comments
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	1, Private funding.
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	Yes, CFM training and certification.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit reviews, education and outreach to applicants, inspections.
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Cost to rebuild or improve a structure in the SFHA, whether damaged or not, is equal to or more than 50 percent of the market value of structure prior to work.
What are the barriers to running an effective NFIP program in the community, if any?	Lack of education and support.
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: December 14, 2004 CAV: October 17, 2023
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 3, 2014: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	December 19, 2014
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Yes, Planning and Zoning boards take floodplain into consideration.
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

14.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 14-11 through Table 14-13.

Table 14-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	2	2	0	4
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	1	0	1
Permits within SFHA	0	0	0	0
2021				
Total Permits	1	2	0	3
Permits within SFHA	0	0	0	0
2022				
Total Permits	3	2	0	5
Permits within SFHA	1	0	0	1
2023				
Total Permits	3	0	0	3
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 14-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
There has been no recent major development or infrastructure between 2019 to present.					

* Only location-specific hazard zones or vulnerabilities identified.

Table 14-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
There are no known or anticipated major development or infrastructure in the next five years.					

14.6 JURISDICTIONAL RISK ASSESSMENT

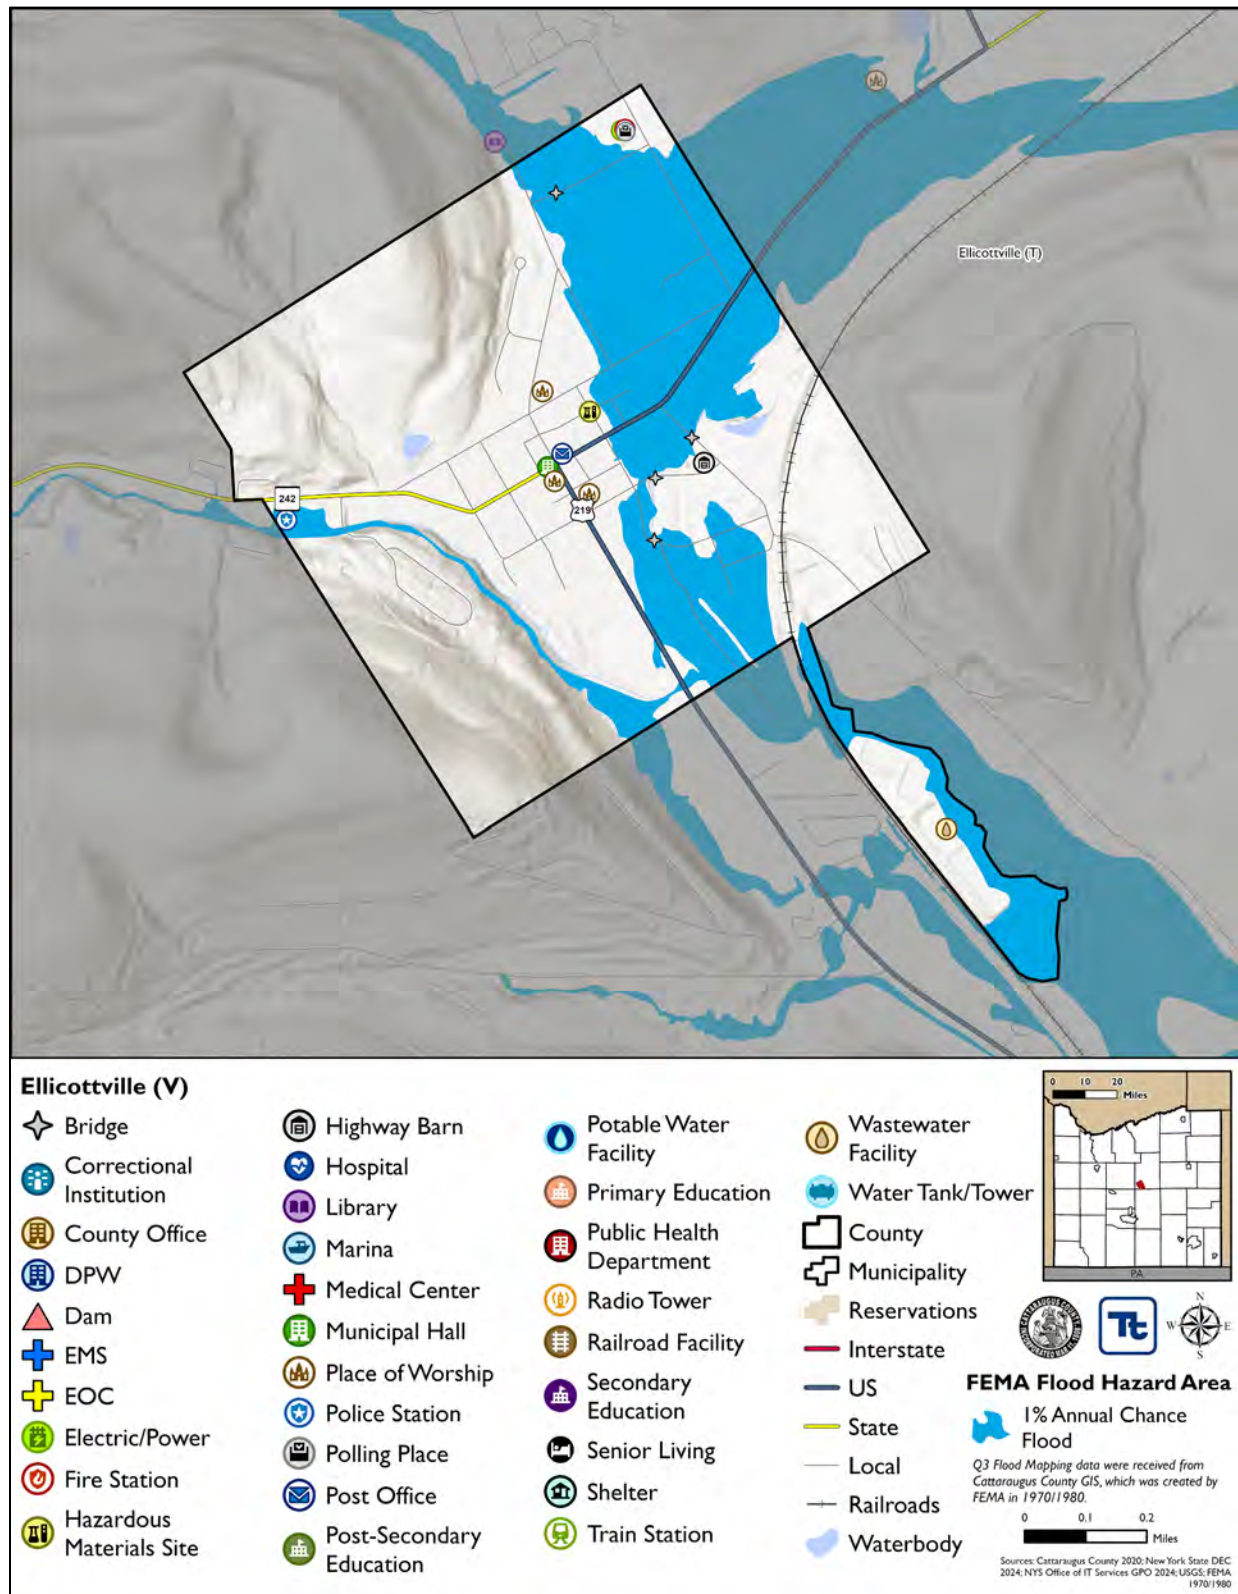

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Ellicottville's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

14.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Village are shown in Figure 14-1 through Figure 14-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Ellicottville has significant exposure. The maps show the location of potential new development, where available.

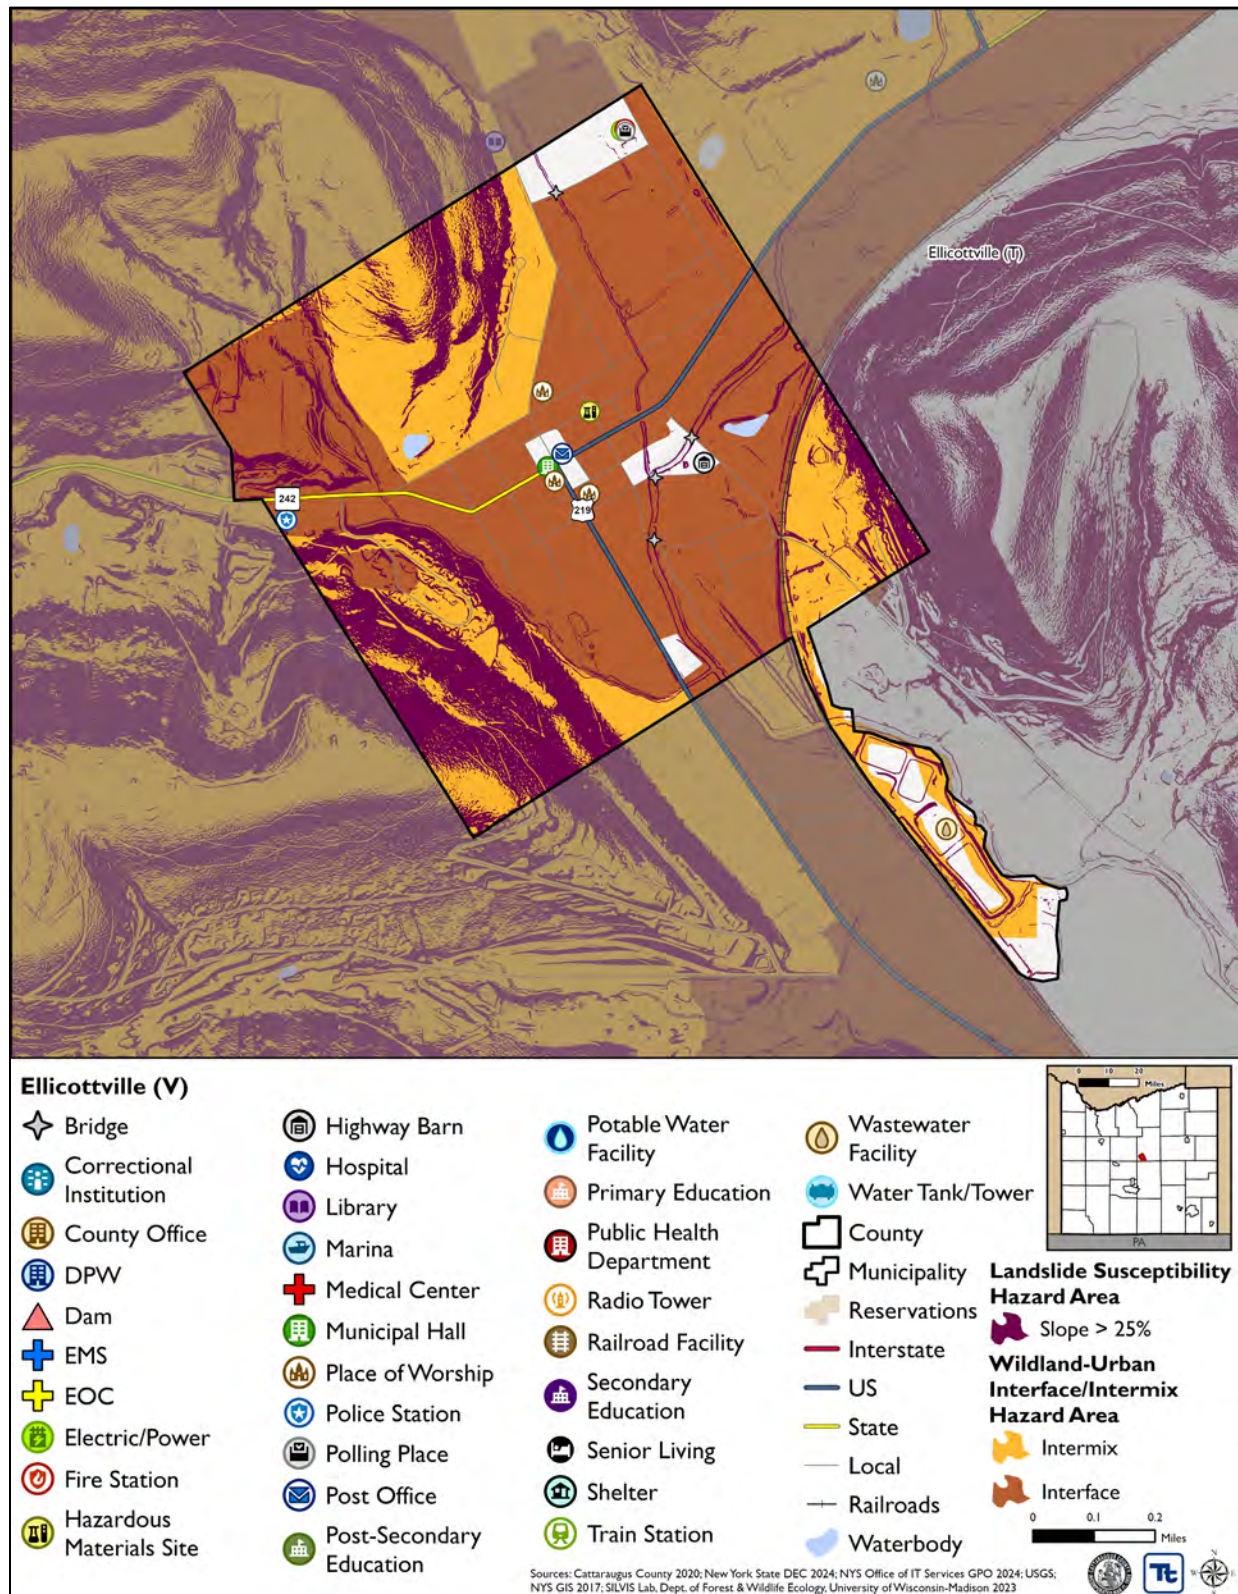

Figure 14-1. Ellicottville Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 14-2. Ellicottville Landslide and Wildfire Hazard Area Extent and Location Map

14.6.2 Hazard Event History

The history of natural and non-natural hazard events in Ellicottville is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 14-14 provides details on loss and damage in Ellicottville during hazard events since the last hazard mitigation plan update.

Table 14-14. Hazard Event History in Ellicottville

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Ellicottville
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Village did not incur damages or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Village adhered to the COVID-19 guidelines, with individuals working from home or practicing social distancing.
January 12, 2020	High Wind	N/A	High wind	The Village did not incur damages or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Village did not incur damages or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Village did not incur damages or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Village did not incur damages or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Village did not incur damages or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Village did not incur damages or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	Trees down, but no damage to property.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Village did not incur damages or losses.
March 6, 2022	High Wind	N/A	High wind	The Village did not incur damages or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	Trees down, but no damage to property.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	Public Works Department snow removal.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

14.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Ellicottville .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Ellicottville reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Village agreed with the preliminary rankings.

Table 14-15 shows Ellicottville's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 14-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Low
Flood	High
Landslide	High
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 14-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 14-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Ellicottville 01	Bridge	X	-	2025-EllicottvilleV-09	-
Ellicottville 53	Bridge	X	-	2025-EllicottvilleV-09	-
Ellicottville Bridge 2	Bridge	X	-	2025-EllicottvilleV-09	-

Source: Cattaraugus County 2024

14.6.4 Identified Issues

After a review of Ellicottville's hazard event history, hazard rankings, hazard location, and current capabilities, Ellicottville identified the following vulnerabilities within the community:

- The Ellicottville Police Department is located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.
- The Wastewater Treatment Plant, a critical facility, is in need of improvements to mitigate utility failure related to system backups and the discharge of untreated water to waterways. The loss of utilities can be detrimental to service users and potentially result in illness and environmental impacts due to untreated waters.
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded roadways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Village which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:
 - Sommerville Valley Road area/valley
 - Lower Cotter Road
 - Lindburg Road
 - Southeast area of the village (along Elk Creek near the Tops grocery store)
 - Mechanic Street
- Critical facilities require backup power to ensure continuity of operations. The Village Hall and Public Works facility do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Van Buren Road is prone to landslides; one home has had multiple flooding and landslide problems. Contractors have rerouted water on the hill, but further studies should be done. Landslides may be able to be mitigated by cutting banks to prevent erosion.
- The Village has dams within its jurisdiction. Despite not being identified as high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.
- The Village faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing

a variety of outreach methods. The v does not currently have hazard mitigation information and outreach on the Village website.

- The Village faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Ellicottville 01
 - Ellicottville 53
 - Ellicottville Bridge 2

14.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

14.7.1 Past Mitigation Action Status

Table 14-17 indicates progress on the Village's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

14.7.2 Additional Mitigation Efforts

Ellicottville did not identify any additional mitigation efforts completed since the last HMP.

Table 14-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Village of Ellicottville-001	Flood Study	Flood	Engineer, Town and Village of Ellicottville	<p>Problem: Sommerville Valley Road area/valley, Lower Cotter Road, Lindburg Road, and the southeast area of the village (along Elk Creek near the Tops grocery store) are areas prone to flooding.</p> <p>Solution: The Town and Village of Ellicottville will conduct a feasibility study to determine the cause and extent of flooding. The town and village will then identify potential actions that can be taken to reduce flood risk</p>	1. No Progress 2. Limited financial and staffing resources.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Ellicottville-002	DPW Backup Power	Utility Failure	Engineer, DPW	<p>Problem: Backup power sources are necessary to maintain critical services for critical facilities. The DPW building does not have backup power.</p> <p>Solution: The village will install a backup generator and necessary electrical hookups at the DPW building.</p>	1. No Progress 2. Limited financial and staffing resources.	1. Include 2. Not applicable 3. Not applicable
2020-Village of Ellicottville-003	Town/Village Hall Backup Power	Utility Failure	Engineer, DPW	<p>Problem: Backup power sources are necessary to maintain critical services for critical facilities. Town/Village Hall does not have backup power.</p> <p>Solution: The village will install a backup generator and necessary electrical hookups at Town/Village Hall.</p>	1. No Progress 2. Limited financial and staffing resources.	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Village of Ellicottville-004	Ellicottville Central School District Backup Power	Utility Failure	Administration	<p>Problem: The Ellicottville Central School only has a manual backup power supply.</p> <p>Solution: The village will assist the school district with applying for funding support for a permanent generator system.</p>	<p>1. No Progress</p> <p>2. Not in the Village's jurisdiction</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. Not in the Village's jurisdiction</p>
2020-Village of Ellicottville-005	FPA Training	Flood	Administration	<p>Problem: Floodplain administration staff require additional training.</p> <p>Solution: The Village FPA and staff who assist with floodplain administration will attend trainings and workshops offered by FEMA and NYS to develop additional floodplain administration skills.</p>	<p>1. Ongoing Capability</p> <p>2. Attendance at NYSFSMA training conferences.</p>	<p>1. Discontinue</p> <p>2. Not applicable</p> <p>3. Attendance at NYSFSMA training conferences.</p>
2020-Village of Ellicottville-006	Mechanic Street Home Elevations	Flood, Severe Storm	NFIP Floodplain Administrator, supported by homeowners	<p>Problem: Multiple homes along Mechanic Street are exposed to flooding.</p> <p>Solution: Conduct outreach to 30 flood-prone property owners and provide information on mitigation alternatives. After preferred mitigation measures are identified, collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement acquisition/purchase/moving/elevating residential homes in the flood prone areas that experience frequent flooding (high risk areas).</p>	<p>1. No Progress</p> <p>2. Limited financial and staffing resources.</p>	<p>1. Include</p> <p>2. Not applicable</p> <p>3. Not applicable</p>

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Village of Ellicottville-007	Elizabeth Street Culvert	Flood, Severe Storm	Public Works	<p>Problem: The Elizabeth Street north side of road's 8" clay tile storm sewer has been damaged in the past. A replacement 12" culvert is needed.</p> <p>Solution: The village will replace and upsize the repetitively damaged/undersized culvert in on Elizabeth Street with a 12" culvert.</p>	1. Complete 2. Project completed	1. Discontinue 2. Not applicable 3. Project completed
2020-Village of Ellicottville-008	Elk Creek	Flood, Severe Storm	Administration, Public Works	<p>Problem: Elk Creek is clogged with debris and sediment in Topps. This increases the risk of flooding.</p> <p>Solution: The village will work with NYS DEC to gain necessary permits to clean Elk Creek and implement the allowable actions.</p>	1. Complete 2. Project completed	1. Discontinue 2. Not applicable 3. Project completed. Ongoing monitoring and cleaning if necessary, occurring annually.
2020-Village of Ellicottville-009	Van Buren Landslide and Flood Protections	Flood, Landslide	Engineer	<p>Problem: Van Buren requires a landslide protection project. 1 home has had multiple flooding/landslide problems. Contractors have rerouted water on the hill, but further studies should be done.</p> <p>Solution: The village will conduct an engineering study to determine what additional mitigation actions can be taken to protect from flooding and landslide. The village will then implement the desired mitigation actions.</p>	1. No Progress 2. Limited financial and staffing resources.	1. Include 2. Not applicable 3. Not applicable

14.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Ellicottville participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Ellicottville would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Village priorities.

Table 14-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 14-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 14-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X				X					
Flood	X	X			X				X	X
Landslide		X			X					
Pandemic				X			X			
Severe Storm	X	X			X				X	X
Severe Winter Storm	X	X			X					X
Utility Failure	X	X							X	X
Wildfire		X		X	X		X			

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 14-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-EllicottvilleV-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-EllicottvilleV-02	Improvements to the Wastewater Treatment Plant	1	1	1	1	1	0	1	1	1	0	0	1	1	1	11	High
2025-EllicottvilleV-03	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-EllicottvilleV-04	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-EllicottvilleV-05	Van Buren Road Landslide Mitigation	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-EllicottvilleV-06	Dam Owner Partnership	1	1	1	1	1	1	0	1	1	0	1	1	1	0	11	High
2025-EllicottvilleV-07	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-EllicottvilleV-08	Pandemic Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-EllicottvilleV-09	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-EllicottvilleV-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Ellicottville Police Department is located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.										
Description of the Solution:	<p>The Village will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the Village will carry out the option.</p>										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Village Budget										
Implementation Timeline:	Within 5 Years										
Goals Met:	1, 3, 5										
Benefits:	Ensures continuity of operations of several critical facilities in the Village.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.										
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.										
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.										
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.										
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.										

Action 2025-EllicottvilleV-02. Improvements to the Wastewater Treatment Plant

Lead Agency:	Engineering		
Supporting Agencies:	Facility Manager, Village Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The Wastewater Treatment Plant, a critical facility, is in need of improvements to mitigate utility failure related to system backups and the discharge of untreated water to waterways. The loss of utilities can be detrimental to service users and potentially result in illness and environmental impacts due to untreated waters.		
Description of the Solution:	The Village Engineer will assess and identify assets at the Wastewater Treatment Plant which are in need of improvement to preserve the facility's capacity and/or create redundancy. Once identified, the Village Engineer will work with the Facility Manager to implement the improvements.		
Estimated Cost:	High		
Potential Funding Sources:	Village Budget,		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 5		
Benefits:	This action will reduce the risk of utility failure to the critical facility, ensuring continuity of operations. The continued operation of this facility is crucial to the facility's service area.		
Impact on Socially Vulnerable Populations:	Populations living near and working at the Wastewater Treatment Plant would have enhanced protections from the utility failure. Services from the critical facility would remain intact to consumers.		
Impact on Future Development:	Future development near the Wastewater Treatment Plant would have enhanced protections from the likelihood of a utility failure at the facility.		
Impact on Critical Facilities/Lifelines:	The Wastewater Treatment Plant would have increased redundancy, assisting in ensuring continuity of operations.		
Impact on Capabilities:	This action will assist in keeping one of the Village's capabilities operational.		
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. Utility failures may be exacerbated by increased extreme heat and drought occurrences; heavier rains and increased winds from severe storms, which may result in utility failure.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input checked="" type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Replace all assets in the facility		Cost prohibitive, not feasible
	Build new facility		Cost prohibitive, not feasible

Action 2025-EllicottvilleV-03. Floodprone Roads

Lead Agency:	Public Works Department		
Supporting Agencies:	Code Enforcement, Engineering, NYS DOT		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	<p>Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in the Village which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:</p> <ul style="list-style-type: none">• Sommerville Valley Road area/valley• Lower Cotter Road• Lindburg Road• Southeast area of the village (along Elk Creek near the Tops grocery store)• Mechanic Street <p>The Village will perform outreach to properties abutting the flood prone roads to provide information on flood mitigation measures (elevation, acquisition, relocation).</p>		
Description of the Solution:	<p>The Village will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include:</p> <ul style="list-style-type: none">• Elevation of roadways• Installation or improvement of drainage systems• Regrading of roadway and soils• Resurfacing or reshaping roadways <p>After preferred mitigation measures are identified for properties abutting the flood prone roads, the Village will collect required property-owner information and develop a FEMA grant application and BCA to obtain funding to implement identified measures of the affected properties that experience frequent flooding. The parameters for this initiative would be funding, benefits versus cost, and willing participation of property owners.</p>		
Estimated Cost:	TBD after mitigation technique is chosen		
Potential Funding Sources:	FEMA HMA, Village Budget, CHIPS		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action improves the Village's reliability in terms of transportation.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		

Alternatives:	Action	Evaluation
	No Action	Current problem exists
	Relocate all flood-prone road system	Not feasible
	Raise all flood prone roads	Cost prohibitive

DRAFT

Action 2025-EllicottvilleV-04. Generators at Critical Facilities

Lead Agency:	Engineering										
Supporting Agencies:	Village Board, Public Works Department										
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Village Hall and Public Works facility do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.										
Description of the Solution:	The Village Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Village will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Village Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of critical facilities that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)

Action	Evaluation										
No Action	-										
Microgrid	Costly and difficult to implement.										
Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.										

Action 2025-EllicottvilleV-05. Van Buren Road Landslide Mitigation

Lead Agency:	Public Works Department										
Supporting Agencies:	Engineering										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Van Buren Road is prone to landslides; one home has had multiple flooding and landslide problems. Contractors have rerouted water on the hill, but further studies should be done. Landslides may be able to be mitigated by cutting banks to prevent erosion.										
Description of the Solution:	<p>The Village Engineer will complete an assessment to identify an appropriate, cost-effective method to mitigation landslide risk on Van Buren Road. Possible mitigation measures include:</p> <ul style="list-style-type: none">• Construction of retaining walls, soil nailing, ground anchor walls• Install horizontal drains to reduce soil saturation• Cut banks along water ways to prevent oversaturated soils from falling• Install netting										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Village Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by landslide on Van Buren Road. Keeping the roadway open to traffic also permits vulnerable populations to travel to critical appointments.										
Impact on Future Development:	Future development in the impacted area will be less likely to be impacted by landslides.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Village's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)

Reconstruct roadway outside of hazard area	Not feasible										
Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers										

Action 2025-EllicottvilleV-06. Dam Owner Partnership

Lead Agency:	Village Board										
Supporting Agencies:	NYS DEC, Dam Owners										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Village has dams within its jurisdiction. Despite not being high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.										
Description of the Solution:	The Village will work with the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3										
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within for those living near areas where the dams are located.										
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Village will be unaware of any safety concerns for the dam or its condition</td></tr><tr><td>Utilize information from NYS DEC</td><td>Owners may not be required to submit a safety plan to the State</td></tr><tr><td>Utilize information from the National Inventory of Dams</td><td>Not all dams are listed on the inventory</td></tr></tbody></table>	Action	Evaluation	No Action	Village will be unaware of any safety concerns for the dam or its condition	Utilize information from NYS DEC	Owners may not be required to submit a safety plan to the State	Utilize information from the National Inventory of Dams	Not all dams are listed on the inventory		
Action	Evaluation										
No Action	Village will be unaware of any safety concerns for the dam or its condition										
Utilize information from NYS DEC	Owners may not be required to submit a safety plan to the State										
Utilize information from the National Inventory of Dams	Not all dams are listed on the inventory										

Action 2025-EllicottvilleV-07. Wildfire Education and Outreach

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire										
Description of the Problem:	The Village faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Village events, the Village newsletters, social media, the Village website, and having the materials on display for the public at Village libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Village by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Village.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Village.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Village's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)

Action 2025-EllicottvilleV-09. Bridge Evaluations

Lead Agency:	Public Works Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none">• Ellicottville 01• Ellicottville 53• Ellicottville Bridge 2										
Description of the Solution:	Public Works will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Remove bridges</td><td>May cause significant traffic problems</td></tr><tr><td>Replace bridges</td><td>Cost prohibitive</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Remove bridges	May cause significant traffic problems	Replace bridges	Cost prohibitive
Action	Evaluation										
No Action	Current problem exists										
Remove bridges	May cause significant traffic problems										
Replace bridges	Cost prohibitive										

15. TOWN OF FARMERSVILLE

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Farmersville with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Farmersville, describes who participated in the planning process, assesses Farmersville's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

15.1 HAZARD MITIGATION PLANNING TEAM

The Town of Farmersville identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. A Town Representative represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 15-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 15-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact

15.2 COMMUNITY PROFILE

The Town of Farmersville is located in the eastern border of Cattaraugus County in western New York State. The Town of Farmersville has a total area of 47.97 square miles. The town is south of the Town of Freedom and north of the towns of Lyndon and Franklinville. The east town line is shared with the Town of Rushford in Allegany County. To the west is the Town of Machias. There are five hamlets located within the Town of Farmersville. The five hamlets are Fairview, Farmersville, Farmersville Station, Hardy Corners, and Laidlaw.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 10.8 percent of the

population is 5 years of age or younger, 30 percent is 65 years of age or older, 0 percent is non-English speaking, 25.8 percent is below the poverty threshold, and 20.3 percent is considered disabled.

15.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Farmersville performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Farmersville to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

15.3.1 Planning and Regulatory Capability and Integration

Table 15-2 summarizes the planning and regulatory tools that are available to Farmersville.

Table 15-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Law Locl 3, 2022	State and Local	Town Board/CEO
How has or will this be integrated with the HMP and how does this reduce risk?				
This chapter provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code) and the State Energy Conservation Construction Code (the Energy Code) in this Town. This chapter is adopted pursuant to Section 10 of the Municipal Home Rule Law. Except as otherwise provided in the Uniform Code, other state law, or other section of this chapter, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions of this chapter.				
Zoning/Land Use Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Subdivision Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Site Plan Code How has or will this be integrated with the HMP and how does this reduce risk?	No	-	-	-

---------------------------	-----	--	--------	--------------------------------------

How has or will this be integrated with the HMP and how does this reduce risk?

The Cattaraugus County Health Department's (CCHD) Strategic Planning Process began in April 2022 using the resources of the New York State Department of Health NYS Public Health Corp Fellows. As a part of this process, the fellows reviewed the 2018–2021 strategic plan for past successes and failures and discussed what was needed for future success. Both an external assessment, in which county demographic data, economic factors, health outcomes, and community health assessment findings that have the potential to affect the agency and strategies were examined, and an internal assessment of a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis was completed.

Other: Community Needs Assessment and Community Health Improvement Plan	Yes	Community Needs Assessment and Community Health Improvement Plan	County	Cattaraugus County Health Department
--	-----	--	--------	--------------------------------------

How has or will this be integrated with the HMP and how does this reduce risk?

The 2022–2024 OGH/BRMC Community Service Plan (CSP) and the CCHD's Community Health Assessment and Community Health Improvement Plan (CHA-CHIP) were conducted to identify significant health needs as outlined by the New York State Department of Health's 2022–2024 Prevention Agenda, where applicable. It also provides critical information OGH/BRMC, the CCHD, and others in a position to make a positive impact on the health of the region's residents. The CSP/CHA-CHIP enables the health department, hospital, and other community partners to strategically establish priorities, develop interventions, and direct resources to improve the health of residents living in the service area.

The CSP/CHA-CHIP includes a detailed examination of priority areas identified in the NYS Prevention Agenda: (1) prevent chronic diseases; (2) promote a healthy and safe environment; (3) promote healthy women, infants and children; (4) promote well-being and prevent mental health and substance use disorders; and (5) prevent communicable diseases. The Prevention Agenda is a six-year effort to make New York the healthiest state. Developed in collaboration with 140 organizations, the plan identifies New York's most urgent health concerns, and suggests ways local health departments, hospitals, and partners from health, business, education, and community organizations can work together to solve them.

15.3.2 Development and Permitting Capability

Table 15-3 summarizes the capabilities of Farmersville to oversee and track development.

Table 15-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?	Yes	Code Enforcement
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development?

Construction/Building/Code Enforcement Department	Yes	Code Enforcement Officer
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	Yes	Fire Department
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

15.3.4 Fiscal Capability

Table 15-5 summarizes financial resources available to Farmersville.

Table 15-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	Yes
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	No
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	No
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	Yes
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	Yes
Open Space Acquisition funding programs	Yes
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	Yes

15.3.5 Education and Outreach Capability

Table 15-6 summarizes the education and outreach resources available to Farmersville.

Table 15-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Town Supervisor
Personnel skilled or trained in website development	Yes	IT Specialist
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	No	-
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	Yes	Newspaper, radio stations, website, Facebook

15.3.6 Community Classifications

Table 15-7 summarizes classifications for community programs available to Farmersville.

Table 15-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	Yes	8	2018
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

15.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 15-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.

- Weak: Capacity does not exist or could use substantial improvement

Table 15-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Moderate

15.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 15-1 is responsible for maintaining this information.

15.4.1 NFIP Statistics

Table 15-9 summarizes the NFIP policy and claim statistics for Farmersville.

Table 15-9. Farmersville NFIP Summary of Policy and Claim Statistics

# Policies	2
# Claims (Losses)	2
Total Loss Payments	\$16,410.66
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

15.4.2 Flood Vulnerability Summary

Table 15-10 provides a summary of the NFIP program in Farmersville.

Table 15-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Areas within the SFHA
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	None that the Town is aware of
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Unknown
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	Unknown
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	NYS building code
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No

NFIP Topic	Comments
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: May 12, 2009 CAV: Not applicable
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law #2, 1992 – Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	October 19, 1992
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	It meets the minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	No
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

15.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 15-11 through Table 15-13.

Table 15-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 15-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
There has been no recent major development or infrastructure between 2019 to present.					

* Only location-specific hazard zones or vulnerabilities identified.

Table 15-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
There are no known or anticipated major development or infrastructure in the next five years.					

15.6 JURISDICTIONAL RISK ASSESSMENT

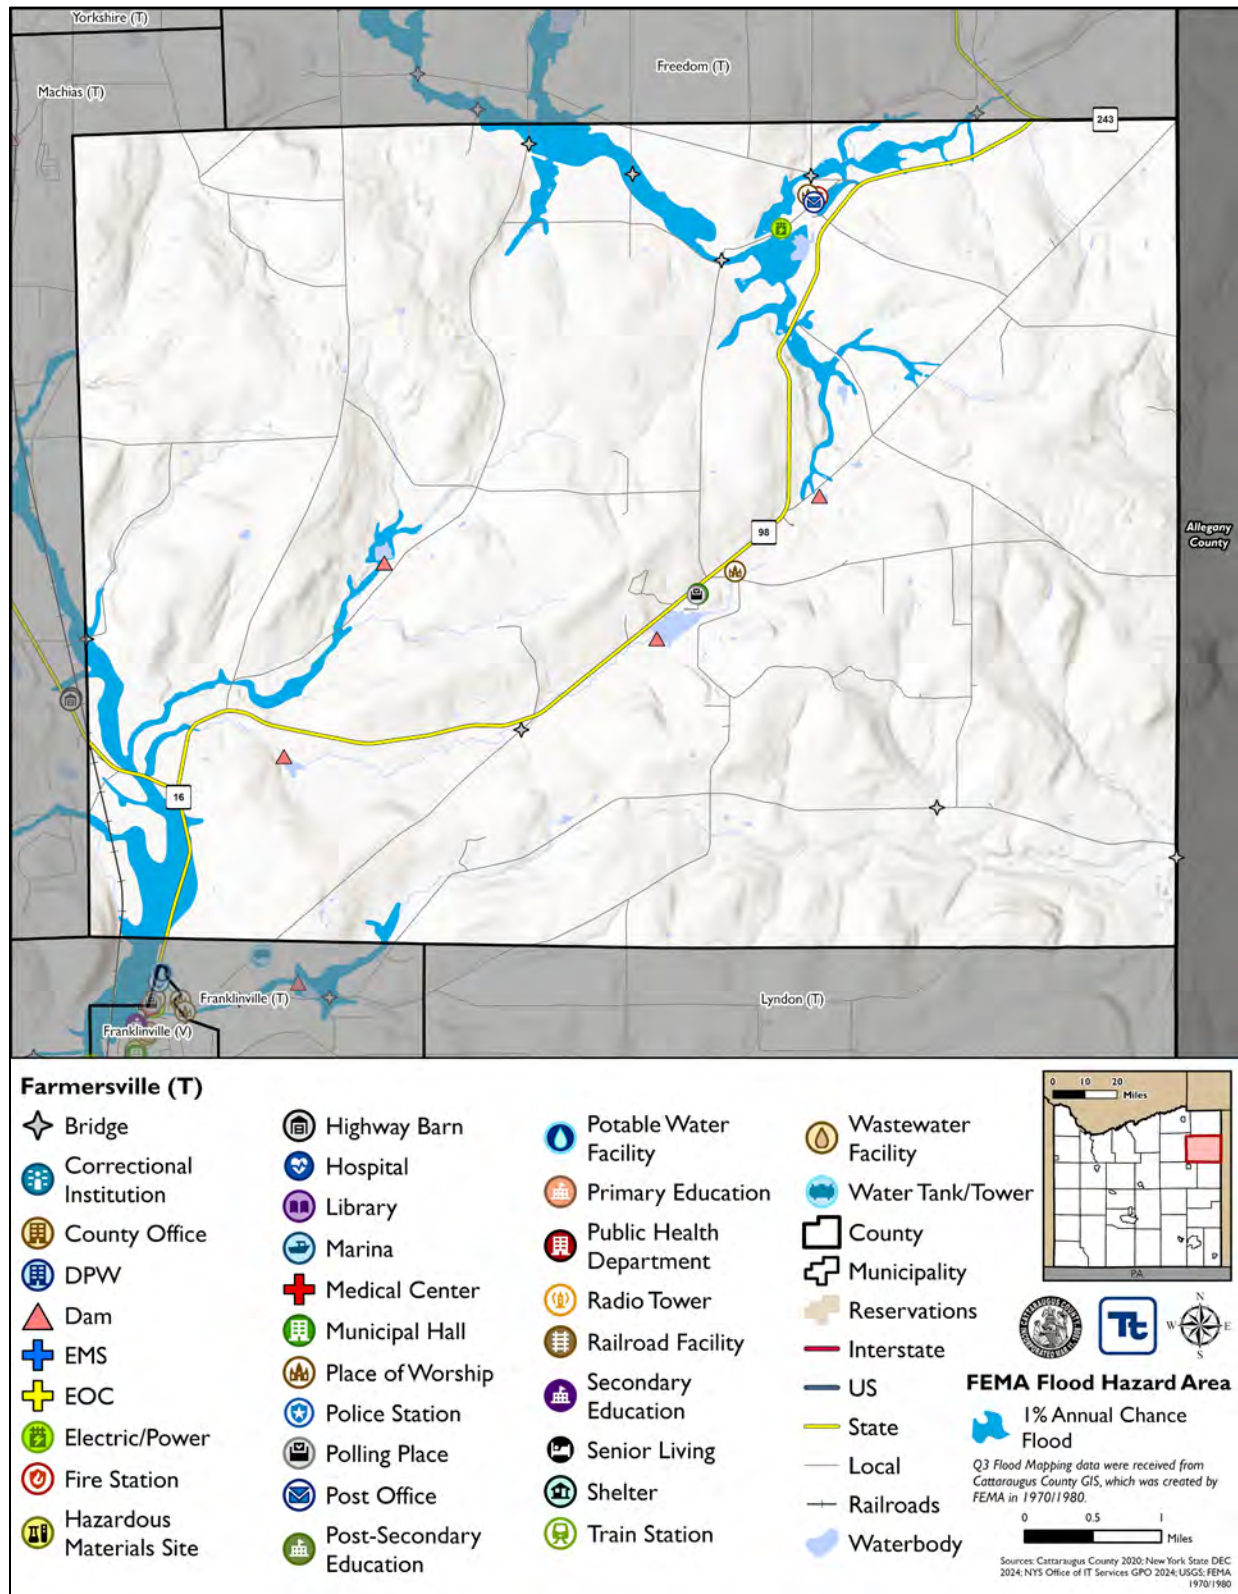

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Farmersville's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

15.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 15-1 through Figure 15-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Farmersville has significant exposure. The maps show the location of potential new development, where available.

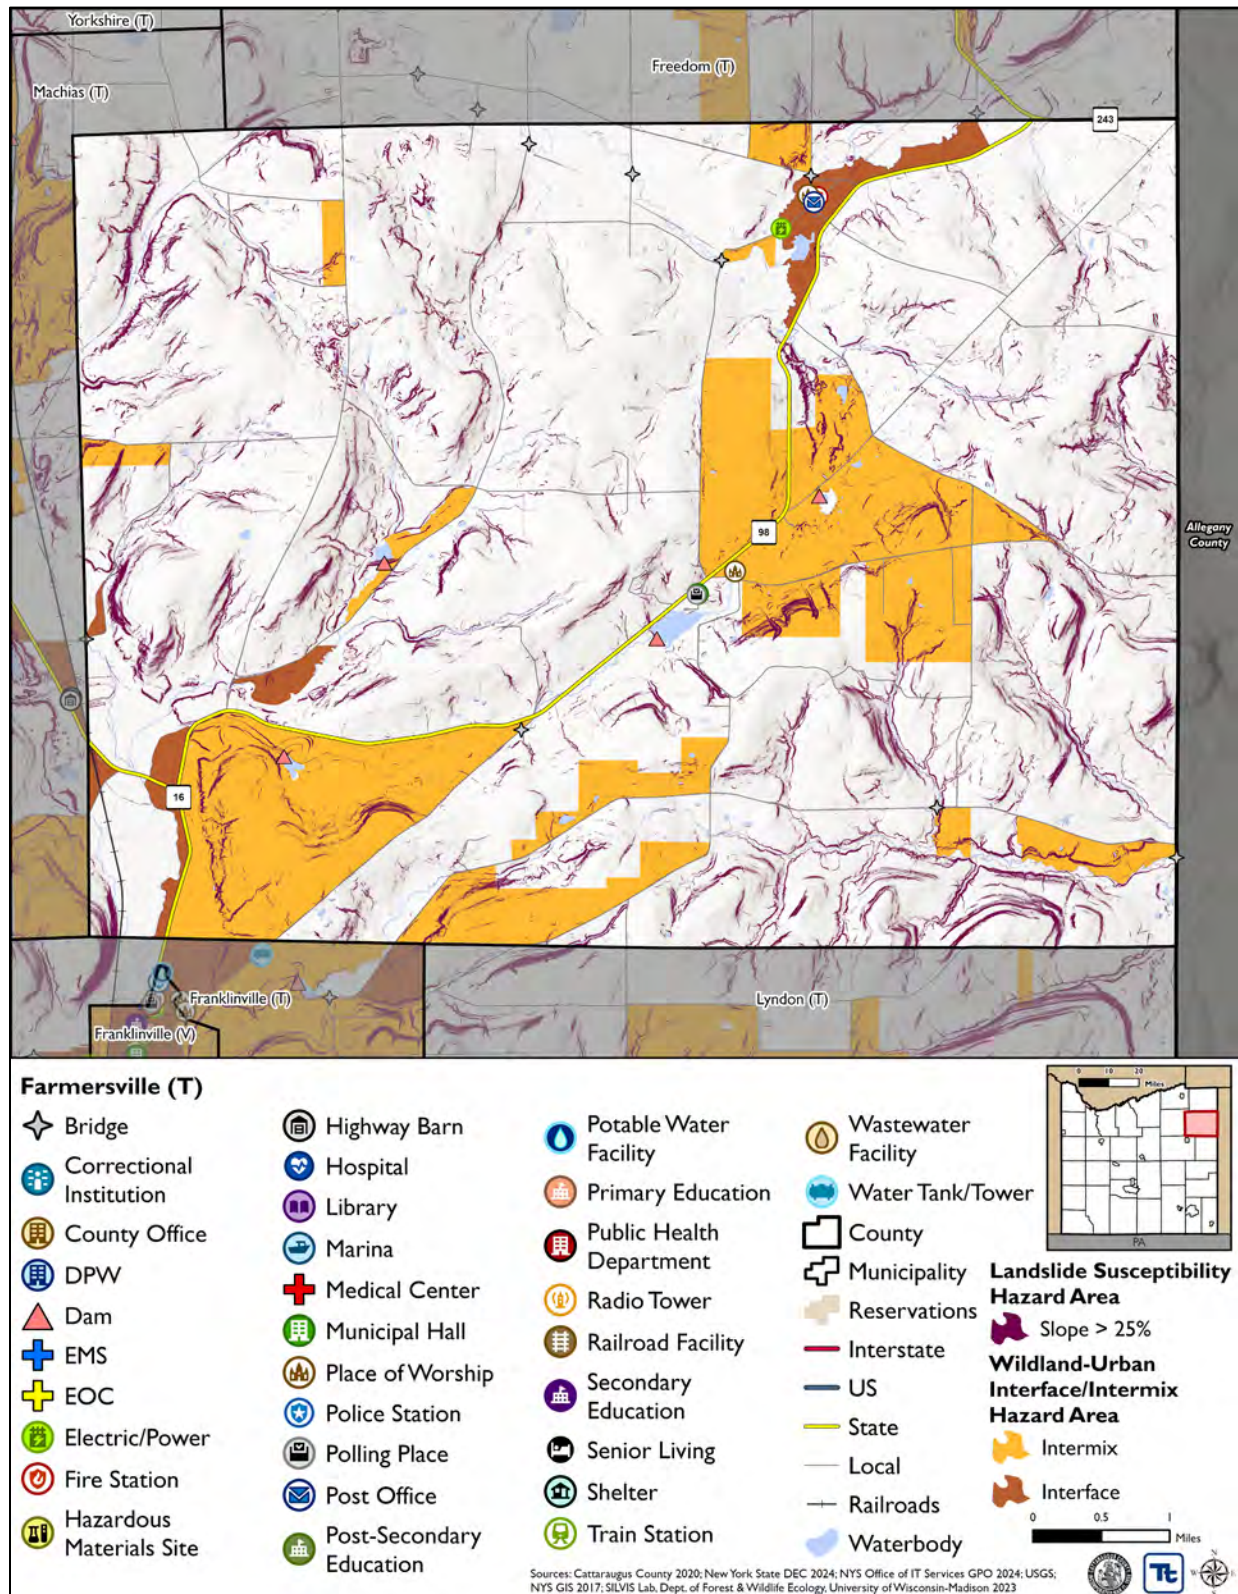

Figure 15-1. Farmersville Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 15-2. Farmersville Landslide and Wildfire Hazard Area Extent and Location Map

15.6.2 Hazard Event History

The history of natural and non-natural hazard events in Farmersville is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 15-14 provides details on loss and damage in Farmersville during hazard events since the last hazard mitigation plan update.

Table 15-14. Hazard Event History in Farmersville

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Farmersville
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur any documented damages or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town abided by social distancing, masking mandates and work from home orders.
January 12, 2020	High Wind	N/A	High wind	Trees and powerlines downed.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur any documented damages or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur any documented damages or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur any documented damages or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur any documented damages or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur any documented damages or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not incur any documented damages or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur any documented damages or losses.
March 6, 2022	High Wind	N/A	High wind	Trees and powerlines downed.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Town did not incur any documented damages or losses.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	Highway Department response to clear roads.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

15.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Farmersville .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Farmersville reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town indicated the rankings were appropriate.

Table 15-15 shows Farmersville's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 15-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Medium
Flood	Medium
Landslide	Medium
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 15-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 15-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Farmersville 05	Bridge	X	-	2025-FarmersvilleT-13	-

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Farmersville 08	Bridge	X	-	2025-FarmersvilleT-13	-
Farmersville 25	Bridge	X	-	2025-FarmersvilleT-13	-
Farmersville 28	Bridge	X	-	2025-FarmersvilleT-13	-
Farmersville 45	Bridge	X	-	2025-FarmersvilleT-13	-

Source: Cattaraugus County 2024

In addition to critical facilities that are exposed to flooding, the following high hazard dams are located in Farmersville:

- Harwood Lake Dam
- Ischua Creek Watershed Dam #2

15.6.4 Identified Issues

After a review of Farmersville's hazard event history, hazard rankings, hazard location, and current capabilities, Farmersville identified the following vulnerabilities within the community:

- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding.
- The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The Town is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. The Town has many steep sloped areas throughout its jurisdiction and should determine local vulnerabilities to landslides threatening primary roadways and properties.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- The Town currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- Critical facilities require backup power to ensure continuity of operations. The Town Hall does not have automatic backup power, which could impact the continuity of operations at the facility in the event of a

utility or power failure. High winds severe weather and severe winter weather are known to cause utility failures, which would impact the continuity of operations at the critical facility.

- Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter storms.
- Stormwater infrastructure in the Town has experienced damages from beavers. Debris from beavers will clog the infrastructure, potentially causing damages. Trees cut down by beavers may also damage roadways, in addition, the dams built by beavers can cause occurrences of roadway flooding by backing up waters and causing a backflow. The Town will reach out to NYS DEC and USACE regarding permitting to remove beaver dams.
- The Town currently lacks a complete inventory of culverts within their jurisdiction. Identifying the location of culverts can assist in the mitigation of flood-related risks through the upsizing, replacement, or repairing the stormwater management infrastructure. Operational and debris-free culverts successfully reduce the flood-risk by keeping waters moving toward an outfall.
- Ischua Creek Watershed Dam #2 is a Class I High Hazard Dam that is located on the Johnson Creek. The dam is owned by the County of Cattaraugus. Failure of the dam could result in inundation of a residential property, woodland areas, agricultural and rural lands, and transportation routes including Laidlaw Road. Although the dam was last inspected in 2022, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.
- Harwood Lake Dam is a Class I High Hazard Dam that is located on the Harwood Lake. The dam is owned by the New York State Division of Fish and Wildlife. Failure of the dam could result in inundation of residential properties, woodland areas, agricultural and rural lands, recreational areas, and transportation routes including State Route 98 and local roadways Brennan Hill Road, Lake Avenue, and Peet Hill Road. Although the dam was last inspected in 2024, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Farmersville 05
 - Farmersville 08
 - Farmersville 25
 - Farmersville 28
 - Farmersville 45

15.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

15.7.1 Past Mitigation Action Status

Table 15-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

15.7.2 Additional Mitigation Efforts

Farmersville has not identified any additional mitigation efforts completed since the last HMP.

DRAFT

Table 15-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Farmersville-001	Flood Zone Mapping	County Soil and Water	Flood	Problem: Lack of updated flood zone maps for the town Solution: Update flood hazard mapping for the town	1. Completed 2. FEMA and NYS DEC updating flood maps.	1. Discontinue 2. Not applicable 3. FEMA and NYS DEC updating flood maps.
2020-Farmersville-002	Generator for Town Hall	Town Board	All Hazards	Problem: Town Hall lacks a generator Solution: Install generators for Town Hall building	1. No Progress 2. Lack of funding to support action	1. Include 2. Not applicable 3. Not applicable
2020-Farmersville-003	Update the Flood Damage Prevention Ordinance	Town Board	Flood	Problem: The Town of Farmersville lacks an updated flood damage prevention ordinance Solution: the town will develop and adopt an updated flood damage prevention ordinance	1. No Progress 2. Town prioritized completion of other actions	1. Include 2. Not applicable 3. Not applicable
2020-Farmersville-004	Floodplain Administrator to attend training on floodplain management	Emergency Management/ Codes Department	Flood	Problem: Floodplain Managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Solution: Obtain/host specialist training and certification for floodplain managers.	1. No Progress 2. Lack of funding to support action	1. Include 2. Not applicable 3. Not applicable
2020-Farmersville-005	Provide information to residents,	Emergency Management, County	Wildfire	Problem: Additional public education on wildfire risk is needed	1. No Progress 2. Lack of funding to support action	1. Include 2. Expand action to include public outreach to all hazards

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
	business owners, and organizations about what they can do to protect their structures from wildfires.	Planning, local municipal agencies		Solution: Provide information to community members on ways they can protect their facilities from wildfires.		3. Not applicable
2020-Farmersville-006	Update Building Codes	County, Town	All Hazards	Problem: Outdated building codes Solution: Update the town's building codes	1. Completed 2. Town's building codes updated in 2022	1. Discontinue 2. Not applicable 3. Town's building codes updated in 2022
2020-Farmersville-007	Culvert upgrade for Bush Hill culvert	Town, DPW, DEC	Flood, Severe storm	Problem: During heavy rainfall and significant snowmelt, the culvert is undersized and causes flood over the roadway. This can result in shoulder and roadway damages. The culvert is prone to clogging from beaver activity. Solution: The town DPW will replace the culvert with a larger one to allow water to flow during periods of increased volume and reduce the likelihood of debris buildup from beaver activity.	1. No Progress 2. Lack of funding to support action	1. Include 2. Not applicable 3. Not applicable
2020-Farmersville-008	Town wide assessment of culverts	Town, Highway Department	Flood, Severe storm	Problem: Town currently lacks a complete inventory of culverts within their jurisdiction Solution: in order to ensure that culverts in need of preventative	1. No Progress 2. Lack of funding to support action	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				maintenance are identified in advance of a storm or other hazard event, the town would conduct an inventory of culverts and identify potential means of upgrading or hardening infrastructure		

15.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Farmersville participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Farmersville would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 15-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 15-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 15-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure		X		X			X		X	
Flood	X	X		X	X		X	X	X	X
Landslide		X		X	X		X			
Pandemic				X			X			
Severe Storm	X	X		X	X		X		X	X
Severe Winter Storm	X	X		X	X		X		X	X
Utility Failure	X	X		X			X		X	X
Wildfire		X		X	X		X			

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 15-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-FarmersvilleT-01	Floodprone Roads	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-FarmersvilleT-02	Substantial Damage Management Plan	1	1	1	1	1	1	1	1	1	1	1	1	1	0	13	High
2025-FarmersvilleT-03	Landslide Mitigation	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-FarmersvilleT-04	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-FarmersvilleT-05	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-FarmersvilleT-06	Comprehensive Outreach Program	1	1	1	1	1	1	0	1	1	1	1	1	0	1	12	High
2025-FarmersvilleT-07	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High

2025-FarmersvilleT-11	Ischua Creek Watershed Dam #2 Rehab	1	1	1	1	0	0	1	1	1	0	1	1	1	1	11	High
2025-FarmersvilleT-12	Harwood Lake Dam Rehab	1	1	1	1	0	0	1	1	1	0	1	1	1	1	11	High

Project Number	Project Name	Scores for Evaluation Criteria														Total	High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives		
2025-FarmersvilleT-13	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-FarmersvilleT-01. Floodprone Roads

Lead Agency:	Highway Department		
Supporting Agencies:	Code Enforcement, Engineering		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding.		
Description of the Solution:	The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include: <ul style="list-style-type: none"> • Elevation of roadways • Installation or improvement of drainage systems • Regrading of roadway and soils • Resurfacing or reshaping roadways 		
Estimated Cost:	TBD after mitigation technique is chosen		
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.		
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.		
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Relocate all flood-prone road system		Not feasible
	Raise all flood prone roads		Cost prohibitive

Action 2025-FarmersvilleT-02. Substantial Damage Management Plan

Lead Agency:	Code Enforcement										
Supporting Agencies:	Town Board, Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Officials in NFIP-participating communities are responsible for regulating all development in SFHAs by issuing permits and enforcing local floodplain requirements, including Substantial Damage, for the repairs of damaged buildings. After any disaster event, they must:</p> <ul style="list-style-type: none"> Determine where the damage occurred within the community and if the damaged structures are in an SFHA. Determine what to use for "market value" and cost to repair; uniformly applying regulations will protect against liability and promote equitable administration. Determine if repairing plus improving the damaged structure equals or exceeds 50% of the structure's pre-damage value. Require permits for floodplain development. <p>The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The Town is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.</p>										
Description of the Solution:	<p>The Town will develop a Substantial Damage Management Plan, following the six-step planning process in 2021 Developing a Substantial Damage Management Plan (https://crsresources.org/files/500/developing_subst_damage_mgmt_plan.pdf). This plan will outline responsibilities for Substantial Damage determinations, determining market value, and permit approval processes following a disaster event.</p>										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will provide a guidance document to determine substantial damage in the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may disproportionately be impacted by substantial damages.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	This action will produce substantial damage guidance for Town officials to use.										
Climate Change Considerations:	Climate change is leading to an increase in frequency and intensity of precipitation events, which also increases flooding and may lead to a main failure.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources following disaster events</td> <td>Resources may not be available during major widespread events</td> </tr> <tr> <td>Establish MOUs with outside agencies to conduct Substantial Damage Determinations</td> <td>A plan outlining responsibility is still necessary to prevent missing important requirements</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources following disaster events	Resources may not be available during major widespread events	Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources following disaster events	Resources may not be available during major widespread events										
Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements										

Action 2025-FarmersvilleT-03. Landslide Mitigation

Lead Agency:	Engineering										
Supporting Agencies:	Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. The Town has many steep sloped areas throughout its jurisdiction and should determine local vulnerabilities to landslides threatening primary roadways and properties.										
Description of the Solution:	The Town Engineer will complete an assessment to identify an appropriate, cost-effective method to mitigation landslide risk within primary roads throughout the Town. Possible mitigation measures include: <ul style="list-style-type: none"> • Construction of retaining walls, soil nailing, ground anchor walls • Install horizontal drains to reduce soil saturation • Cut banks along water ways to prevent oversaturated soils from falling • Install netting 										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by landslide along Town roads. Keeping the roadway open to traffic also permits vulnerable populations to travel to critical appointments.										
Impact on Future Development:	Future development in the impacted area will be less likely to be impacted by landslides.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Reconstruct roadways outside of hazard area</td> <td>Not feasible</td> </tr> <tr> <td>Close roads and reroute traffic around hazard area</td> <td>Not feasible, would cause confusion amongst travelers</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Reconstruct roadways outside of hazard area	Not feasible	Close roads and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers		
Action	Evaluation										
No Action	Current problem exists										
Reconstruct roadways outside of hazard area	Not feasible										
Close roads and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers										

Action 2025-FarmersvilleT-04. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities.		
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-FarmersvilleT-05. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-FarmersvilleT-06. Comprehensive Outreach Program

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on hazard risks and methods of mitigation measures, including those for dam and levee failure, flood, landslide, pandemic, severe storm, severe winter storm, utility failure, and wildfire. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for each individual hazard of concern.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the current public education and outreach program in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the various hazards which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of potential hazards. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's already existing public education and outreach program and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from hazards and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Town</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-FarmersvilleT-07. Generators at Critical Facilities

Lead Agency:	Engineering										
Supporting Agencies:	Town Board										
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Town Hall does not have automatic backup power, which could impact the continuity of operations at the facility in the event of a utility or power failure. High winds severe weather and severe winter weather are known to cause utility failures, which would impact the continuity of operations at the critical facility.										
Description of the Solution:	The Town Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Town will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for this critical facility and its operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of a critical facility that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>-</td> </tr> <tr> <td>Microgrid</td> <td>Costly and difficult to implement.</td> </tr> <tr> <td>Solar panels and battery backup</td> <td>Solar power is unlikely to be able to provide battery power for extended power failure events.</td> </tr> </tbody> </table>		Action	Evaluation	No Action	-	Microgrid	Costly and difficult to implement.	Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.	
Action	Evaluation										
No Action	-										
Microgrid	Costly and difficult to implement.										
Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.										

Action 2025-FarmersvilleT-08. Undersized Culverts

Lead Agency:	Engineering										
Supporting Agencies:	Code Enforcement, Highway Superintendent										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. Several culverts in the Town are undersized or have been damaged from instances of flooding and the debris caused by severe storms and severe winter storms.										
Description of the Solution:	The Town Engineer will complete an engineering survey of the culverts located in the Town that are undersized and contribute to flooding to determine the proper size necessary to provide stormwater capacity. The Town Highway Department will complete the necessary upsizing for the culverts.										
Estimated Cost:	TBD after study is complete										
Potential Funding Sources:	FEMA HMA, CHIPS, Town Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4										
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.										
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.										
Impact on Capabilities:	Identifying the culverts that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.										
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes culvert sizes to meet changing stormwater needs as the result of climate change.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Remove roadway</td> <td>Roadway cannot be removed</td> </tr> <tr> <td>Raingardens</td> <td>Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Remove roadway	Roadway cannot be removed	Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.		
Action	Evaluation										
No Action	Current problem exists										
Remove roadway	Roadway cannot be removed										
Raingardens	Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.										

Action 2025-FarmersvilleT-09. Beaver Removal

Lead Agency:	Highway Department										
Supporting Agencies:	Code Enforcement, Town Board, NYS DEC, USACE										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Stormwater infrastructure in the Town has experienced damages from beavers. Debris from beavers will clog the infrastructure, potentially causing damages. Trees cut down by beavers may also damage roadways, in addition, the dams built by beavers can cause occurrences of roadway flooding by backing up waters and causing a backflow. The Town will reach out to NYS DEC and USACE regarding permitting to remove beaver dams.										
Description of the Solution:	The Town will reach out to NYS DEC and USACE regarding permitting to remove the beavers and any dams, as beavers are a protected species in the State of New York. Once permitted, the Town will continue to work with NYS DEC, USACE, and approved contractors to safely remove the beaver dams and relocate the beavers.										
Estimated Cost:	Medium										
Potential Funding Sources:	Town Budget, NYS DEC										
Implementation Timeline:	Within 3 years										
Goals Met:	1										
Benefits:	This action will remove beavers and their dams which are causing or contributing to roadway flooding in the Town. The reduction of flood risk to Town roads will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.										
Impact on Future Development:	Future development will not incur flood damages caused by beavers.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses. Water systems will be protected as well due to debris no longer being able to impact stormwater infrastructure.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation and stormwater infrastructure.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input checked="" type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Remove dams without permit</td><td>Town will face fines from NYS DEC and potentially other entities</td></tr><tr><td>Trap beaver and do not remove dam</td><td>Flooding will still occur; Town may incur fines from NYS DEC and other entities</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Remove dams without permit	Town will face fines from NYS DEC and potentially other entities	Trap beaver and do not remove dam	Flooding will still occur; Town may incur fines from NYS DEC and other entities
Action	Evaluation										
No Action	Current problem exists										
Remove dams without permit	Town will face fines from NYS DEC and potentially other entities										
Trap beaver and do not remove dam	Flooding will still occur; Town may incur fines from NYS DEC and other entities										

Action 2025-FarmersvilleT-10. Culvert Mapping

Lead Agency:	Code Enforcement										
Supporting Agencies:	Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Town currently lacks a complete inventory of culverts within their jurisdiction. Identifying the location of culverts can assist in the mitigation of flood-related risks through the upsizing, replacement, or repairing the stormwater management infrastructure. Operational and debris-free culverts successful reduce the flood-risk by keeping waters moving toward an outfall.										
Description of the Solution:	The Town will create an internal inventory of the location of all culverts located in the Town. This inventory will identify its location by GPS coordinates, who the culvert is maintained by the road it is located on or near, who has jurisdiction over the roadway, and the current condition of the culvert. This information will allow the Town to enforce a maintenance schedule for all culverts in the Town.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 2 years										
Goals Met:	1, 4										
Benefits:	This information will allow the Town to enforce a maintenance schedule for all culverts in the Town. A maintenance schedule for all culverts can reduce the likelihood of experiencing flood-related impacts by regular debris removal, culvert upsizing, and addressing potential deteriorating conditions. This action will also reduce the potential for flood roadways.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties may be near a culvert which is impacted by debris or clogging, which can result in the flooding of roadways and properties.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.										
Impact on Capabilities:	While having an inventory of culvert locations will be a new capability of the Town, it will also enhance and strengthen its stormwater management capabilities by improving maintenance.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Having an inventory of culverts can assist in ensuring the infrastructure is clear of debris and in working condition prior to heavy rains.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Inventory culverts only on Town-maintained roads</td><td>Full inventory not captured</td></tr><tr><td>Inventory culverts only maintained by Town</td><td>Full inventory not captured</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Inventory culverts only on Town-maintained roads	Full inventory not captured	Inventory culverts only maintained by Town	Full inventory not captured		
Action	Evaluation

Inventory culverts only on Town-maintained roads	Full inventory not captured										
Inventory culverts only maintained by Town	Full inventory not captured										

Action 2025-FarmersvilleT-11. Ischua Creek Watershed Dam #2 Rehab

Lead Agency:	County of Cattaraugus										
Supporting Agencies:	County Engineer, County OES, NYDEC, Municipal Engineer										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Ischua Creek Watershed Dam #2 is a Class I High Hazard Dam that is located on the Johnson Creek. The dam is owned by the County of Cattaraugus. Failure of the dam could result in inundation of a residential property, woodland areas, agricultural and rural lands, and transportation routes including Laidlaw Road. Although the dam was last inspected in 2022, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.										
Description of the Solution:	The Municipal Engineer will work with the County of Cattaraugus to complete an engineering study of Ischua Creek Watershed Dam #2. The Town will also request information and input from its Highway department and the County regarding impacted roadways. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Town and the County of Cattaraugus will pursue funding support, permit approval from NYSDEC, and implement the cost-effective measures.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, HHPD										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3, 4, 6, 7										
Benefits:	This action will improve the safety and security of those who live within the dam inundation areas of the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within the Special Flood Hazard Area and inundation areas where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	Future development located in or near the dam inundation area will be further protected from a dam failure event.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event due to projected increases in precipitation. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Decommission Dam	High cost, flood risk for nearby infrastructure increased, loss an environmental, flood control, and stormwater management resource.										
Elevate nearby structures	Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions										

Action 2025-FarmersvilleT-12. Harwood Lake Dam Rehab

Lead Agency:	New York State Division of Fish and Wildlife										
Supporting Agencies:	County Engineer, County OES, NYDEC, Municipal Engineer										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Harwood Lake Dam is a Class I High Hazard Dam that is located on the Harwood Lake. The dam is owned by the New York State Division of Fish and Wildlife. Failure of the dam could result in inundation of residential properties, woodland areas, agricultural and rural lands, recreational areas, and transportation routes including State Route 98 and local roadways Brennan Hill Road, Lake Avenue, and Peet Hill Road. Although the dam was last inspected in 2024, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.										
Description of the Solution:	The Municipal Engineer will work with the New York State Division of Fish and Wildlife to complete an engineering study of Harwood Lake Dam. The Town will also request information and input from its Highway department and the County regarding impacted roadways. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Town and the New York State Division of Fish and Wildlife will pursue funding support, permit approval from NYSDEC, and implement the cost-effective measures.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, HHPD										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3, 4, 6, 7										
Benefits:	This action will improve the safety and security of those who live within the dam inundation areas of the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within the Special Flood Hazard Area and inundation areas where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	Future development located in or near the dam inundation area will be further protected from a dam failure event.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.

Action	Evaluation										
No Action	Current problem exists										
Decommission Dam	High cost, flood risk for nearby infrastructure, loss of an environmental and recreational resource.										
Elevate nearby structures	High cost and not feasible for commercial properties. Will not reduce potential for dam failure due to dam conditions										

Action 2025-FarmersvilleT-13. Bridge Evaluations

Lead Agency:	Highway Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none"> • Farmersville 05 • Farmersville 08 • Farmersville 25 • Farmersville 28 • Farmersville 45 										
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

No Action	Current problem exists										
Remove bridges	May cause significant traffic problems										
Replace bridges	Cost prohibitive										

16. TOWN OF FRANKLINVILLE

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Franklinville with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Franklinville, describes who participated in the planning process, assesses Franklinville's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

16.1 HAZARD MITIGATION PLANNING TEAM

The Town of Franklinville identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Town Supervisor represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 16-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 16-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Catie Campbell, Supervisor Address: 11 Park Square, PO Box 146, Franklinville NY 14737 Phone Number: (716) 676-3077 Email: townsupervisor@franklinvilleny.org	Name/Title: Andrea Stanbro, Town Clerk Address: 11 Park Square, PO Box 146, Franklinville NY 14737 Phone Number: (716) 676-3077 ext. 1 Email: franklinvilletownclerk@gmail.com
National Flood Insurance Program Floodplain Administrator	
Name/Title: Ben McDonnell, Code Enforcement Officer Address: 11 Park Square, PO Box 146, Franklinville NY 14737 Phone Number: (716) 676-3077 Ext. 5 Email: towncode@franklinvilleny.org	
Additional Contributors	
Name/Title: Scott Stanbro, Highway Superintendent Method of Participation: Assisted with information gathering with previous hazard events, NFIP administration, and permitting.	

16.2 COMMUNITY PROFILE

The Town of Franklinville is located in the northeast quadrant of Cattaraugus County in western New York State. The Town of Franklinville has a total area of 51.98 square miles. Ischua Creek flows southward through the town. The town is west of the Town of Lyndon and south of the towns of Machias and Farmersville. It is north of the towns Humphrey and Ischua and east of the Town of Ellicottville. There are four hamlets located within the Town of

Franklinville. The four hamlets are Cadiz, Devereaux, Fitch, and The Narrows. The Village of Franklinville is also located within the town.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 1.8 percent of the population is 5 years of age or younger, 27.3 percent is 65 years of age or older, 2.3 percent is non-English speaking, 7.2 percent is below the poverty threshold, and 11.7 percent is considered disabled.

16.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Franklinville performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Franklinville to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

16.3.1 Planning and Regulatory Capability and Integration

Table 16-2 summarizes the planning and regulatory tools that are available to Franklinville.

Table 16-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 3, 2007: New York State Uniform Fire Prevention and Building Code	State and Local	Code Enforcement

How has or will this be integrated with the HMP and how does this reduce risk?

This local law provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code) and the State Energy Conservation Construction Code (the Energy Code) in this

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Zoning/Land Use Code	Yes	Local Law 1, 1999: Zoning	Local	Code Enforcement
<p>Town. This local law is adopted pursuant to section 10 of the Municipal Home Rule Law. Except as otherwise provided in the Uniform Code, the energy Code other state law, or other section of this local law, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions this local law.</p> <p>How has or will this be integrated with the HMP and how does this reduce risk? It is the intent and purpose of this law to promote the public health, safety, and general welfare. Specifically, the purposes of this law are:</p> <ol style="list-style-type: none"> 1. To secure safety for residents from flood, fire and other dangers. 2. To provide adequate light and air. 3. To prevent the overcrowding of land and to avoid undue concentration of population. 4. To prevent congestion on the streets and roadways in the Town. 5. To facilitate the adequate provision of transportation, water, sewerage, schools, parks, and other public requirements. 6. To accommodate solar energy systems and equipment and access to sunlight necessary therefor. 7. To implement the broad guidelines contained in the planning document. Vision for the Year 2010: A Statement of Goals and Policy Objectives. 				
Subdivision Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Site Plan Code	Yes	Local Law 1, 1999: Zoning, Article 10	Local	Town Board
<p>How has or will this be integrated with the HMP and how does this reduce risk? The purpose of this article is to ensure that any new development in the Town of Franklinville is in harmony with the character of the town and that new development meets the guidelines established in the Town's statement of goals and policy objectives. Vision For the Year 2010. An additional purpose is to minimize conflicts between future development and neighboring existing uses and natural features of the site; this will minimize any potential adverse effects to the health, safety, and general welfare of the Town of Franklinville.</p>				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
<p>How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to "caveat emptor," a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.</p>				
Growth Management	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Environmental Protection Ordinance(s)	Yes	Local Law 1, 1999: Zoning, Section 12.6	Local	Town Board
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------------	--	---	---

Section 12.6 Stripping of Topsoil: Without a special use permit from the Zoning Board of Appeals, no person shall strip, excavate or otherwise remove top soil for sale or use other than on the premises from which the same shall be taken, except in connection with the construction or alteration of a building or paved parking area on such premises and excavation or grading incidental thereto.

Flood Damage Prevention Ordinance	Yes	Local Law 2, 1987: Flood Damage Prevention	Federal, State, County and Local	Code Enforcement
How has or will this be integrated with the HMP and how does this reduce risk? Promotes public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas. A. Regulate uses which are dangerous to health, safety and property due to water or erosion hazards or which result in damaging increases in erosion or in flood heights or velocities. B. Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction. C. Control the alteration of natural floodplains, stream channels and natural protective barriers which are involved in the accommodation of floodwaters. D. Control filling, grading, dredging and other development which may increase erosion or flood damages. E. Regulate the construction of flood barriers which will unnaturally divert floodwaters, or which may increase flood hazards to other lands. F. Qualify for and maintain participation in the National Flood Insurance Program.

RESPONSE/RECOVERY PLANNING				
Comprehensive Emergency Management Plan	Yes	Comprehensive Emergency Management Plan (CEMP)	County	OES
How has or will this be integrated with the HMP and how does this reduce risk? The CEMP defines the scope of preparedness and emergency management activities necessary in the County. This document assigns responsibility to organizations and individuals for carrying out specific actions that exceed routine responsibility at projected times and places during an emergency; sets lines of authority and organizational relationships and shows how all actions will be coordinated; identifies how people and property are protected; and identifies personnel, equipment, facilities, supplies, and other resources available within the jurisdiction or by agreement with other jurisdictions.				
Continuity of Operations Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Substantial Damage Response Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Threat and Hazard Identification and Risk Assessment	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Public Health Plan	Yes	Health Department Strategic Plan 2022–2025	County	Health Department
How has or will this be integrated with the HMP and how does this reduce risk? The Cattaraugus County Health Department's (CCHD) Strategic Planning Process began in April 2022 using the resources of the New York State Department of Health NYS Public Health Corp Fellows. As a part of this process, the fellows reviewed the 2018–2021 strategic plan for past successes and failures and discussed what was needed for future success. Both an external assessment, in which county demographic data, economic factors, health outcomes, and community health assessment findings that have the potential to affect the agency and strategies were examined, and an internal assessment of a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis was completed.				
Other: Community Needs Assessment and Community Health Improvement Plan	Yes	Community Needs Assessment and Community Health Improvement Plan	County	Health Department
How has or will this be integrated with the HMP and how does this reduce risk? The 2022–2024 OGH/BRMC Community Service Plan (CSP) and the CCHD's Community Health Assessment and Community Health Improvement Plan (CHA-CHIP) were conducted to identify significant health needs as outlined by the New York State Department of Health's 2022–2024 Prevention Agenda, where applicable. It also provides critical information OGH/BRMC, the CCHD, and others in a position to make a positive impact on the health of the region's residents. The CSP/CHA-CHIP enables the health department, hospital, and other community partners to strategically establish priorities, develop interventions, and direct resources to improve the health of residents living in the service area. The CSP/CHA-CHIP includes a detailed examination of priority areas identified in the NYS Prevention Agenda: (1) prevent chronic diseases; (2) promote a healthy and safe environment; (3) promote healthy women, infants and children; (4) promote well-being and prevent mental health and substance use disorders; and (5) prevent communicable diseases. The Prevention Agenda is a six-year effort to make New York the healthiest state. Developed in collaboration				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------	--	---	--

with 140 organizations, the plan identifies New York's most urgent health concerns, and suggests ways local health departments, hospitals, and partners from health, business, education, and community organizations can work together to solve them.

16.3.2 Development and Permitting Capability

Table 16-3 summarizes the capabilities of Franklinville to oversee and track development.

Table 16-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?		
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 	Yes	Code Enforcement Officer and Zoning Board of Appeals
Are permits tracked by hazard area? (For example, floodplain development permits.)	No	-
Do you have a buildable land inventory?		
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 	No	-
Describe the level of buildout in your jurisdiction.	N/A	20%

16.3.3 Administrative and Technical Capability

Table 16-4 summarizes potential staff and personnel resources available to Franklinville and their current responsibilities that contribute to hazard mitigation.

Table 16-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	No	Local Law 1, 2010 was repealed, abolishing the Town of Franklinville Planning Board and transferring all power, function, responsibility or duty to the Town Board as per Law Local 1, 2021.
Zoning Board of Adjustment	Yes	With due consideration for the purpose and intent of this zoning law, the Zoning Board of Appeals shall hear and determine appeals from any order, requirement, decision, interpretation or determination made by the Code Enforcement Officer charged with the enforcement of this law. The board may reverse or affirm, wholly or partly, or may modify the order, requirement, decision, interpretation or determination appealed from and shall make such order, requirement, decision, interpretation or determination as, in

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
		its opinion, ought to have been made in the matter; decide any question involving the interpretation of any provision of this law, including determination of the exact location of any district boundary, if there is uncertainty with respect thereto; have the power, upon an appeal from a decision or determination of the Code Enforcement Officer, to grant area variances and use variances; have the power to approve, disapprove or approve with conditions applications for special use permit; hear and decide all matters referred to it.
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	Highway Department maintains the Town's roads and grounds.
Construction/Building/Code Enforcement Department	Yes	Code Enforcement enforces the construction code and administers the NFIP.
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	Yes	Highway Department maintains the Town's roads and grounds.
Mutual aid agreements	Yes	County and surrounding municipalities for emergency response.
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

16.3.4 Fiscal Capability

Table 16-5 summarizes financial resources available to Franklinville.

Table 16-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	No
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	No
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	No
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

16.3.5 Education and Outreach Capability

Table 16-6 summarizes the education and outreach resources available to Franklinville.

Table 16-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Supervisor
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	Yes	Website
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	Yes	County
Natural disaster/safety programs in place for schools	Yes	Fire and Severe Storm Programs provided yearly by schools
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

16.3.6 Community Classifications

Table 16-7 summarizes classifications for community programs available to Franklinville.

Table 16-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

16.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 16-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.

- Weak: Capacity does not exist or could use substantial improvement

Table 16-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Moderate

16.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 16-1 is responsible for maintaining this information.

16.4.1 NFIP Statistics

Table 16-9 summarizes the NFIP policy and claim statistics for Franklinville.

Table 16-9. Franklinville NFIP Summary of Policy and Claim Statistics

# Policies	2
# Claims (Losses)	2
Total Loss Payments	\$11,319.09
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

16.4.2 Flood Vulnerability Summary

Table 16-10 provides a summary of the NFIP program in Franklinville.

Table 16-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	County Road 69 between Baker St. and Rd and NYS Rt 16, Along the Ischua Valley Creek
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Unknown
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	No process
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	Unknown
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	None
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Yes, but it is outdated
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	Need a certified flood plain management training and there is no local trainings available.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permits, inspections for new construction
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Unknown
What are the barriers to running an effective NFIP program in the community, if any?	Staffing, funding & finances, lack of training
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No

NFIP Topic	Comments
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: January 23, 2021 CAV: April 2, 1996
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law 2, 1987
What is the date that your flood damage prevention ordinance was last amended?	April 13, 1987
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets expectations
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Local law – zoning 1-1999 –The Zoning Board of Appeals shall consider the Variance Procedure contained in Section 6.0 of that Local Law and the special criteria that must be met in order to grant an application for a variance.
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

16.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 16-11 through Table 16-13.

Table 16-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	7	0	4	11
Permits within SFHA	0	0	0	0
2020				
Total Permits	2	0	9	11
Permits within SFHA	0	0	0	0
2021				
Total Permits	5	0	17	22
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023

The Town did not indicate any known or anticipated major development or infrastructure in the next five years.					

16.6 JURISDICTIONAL RISK ASSESSMENT

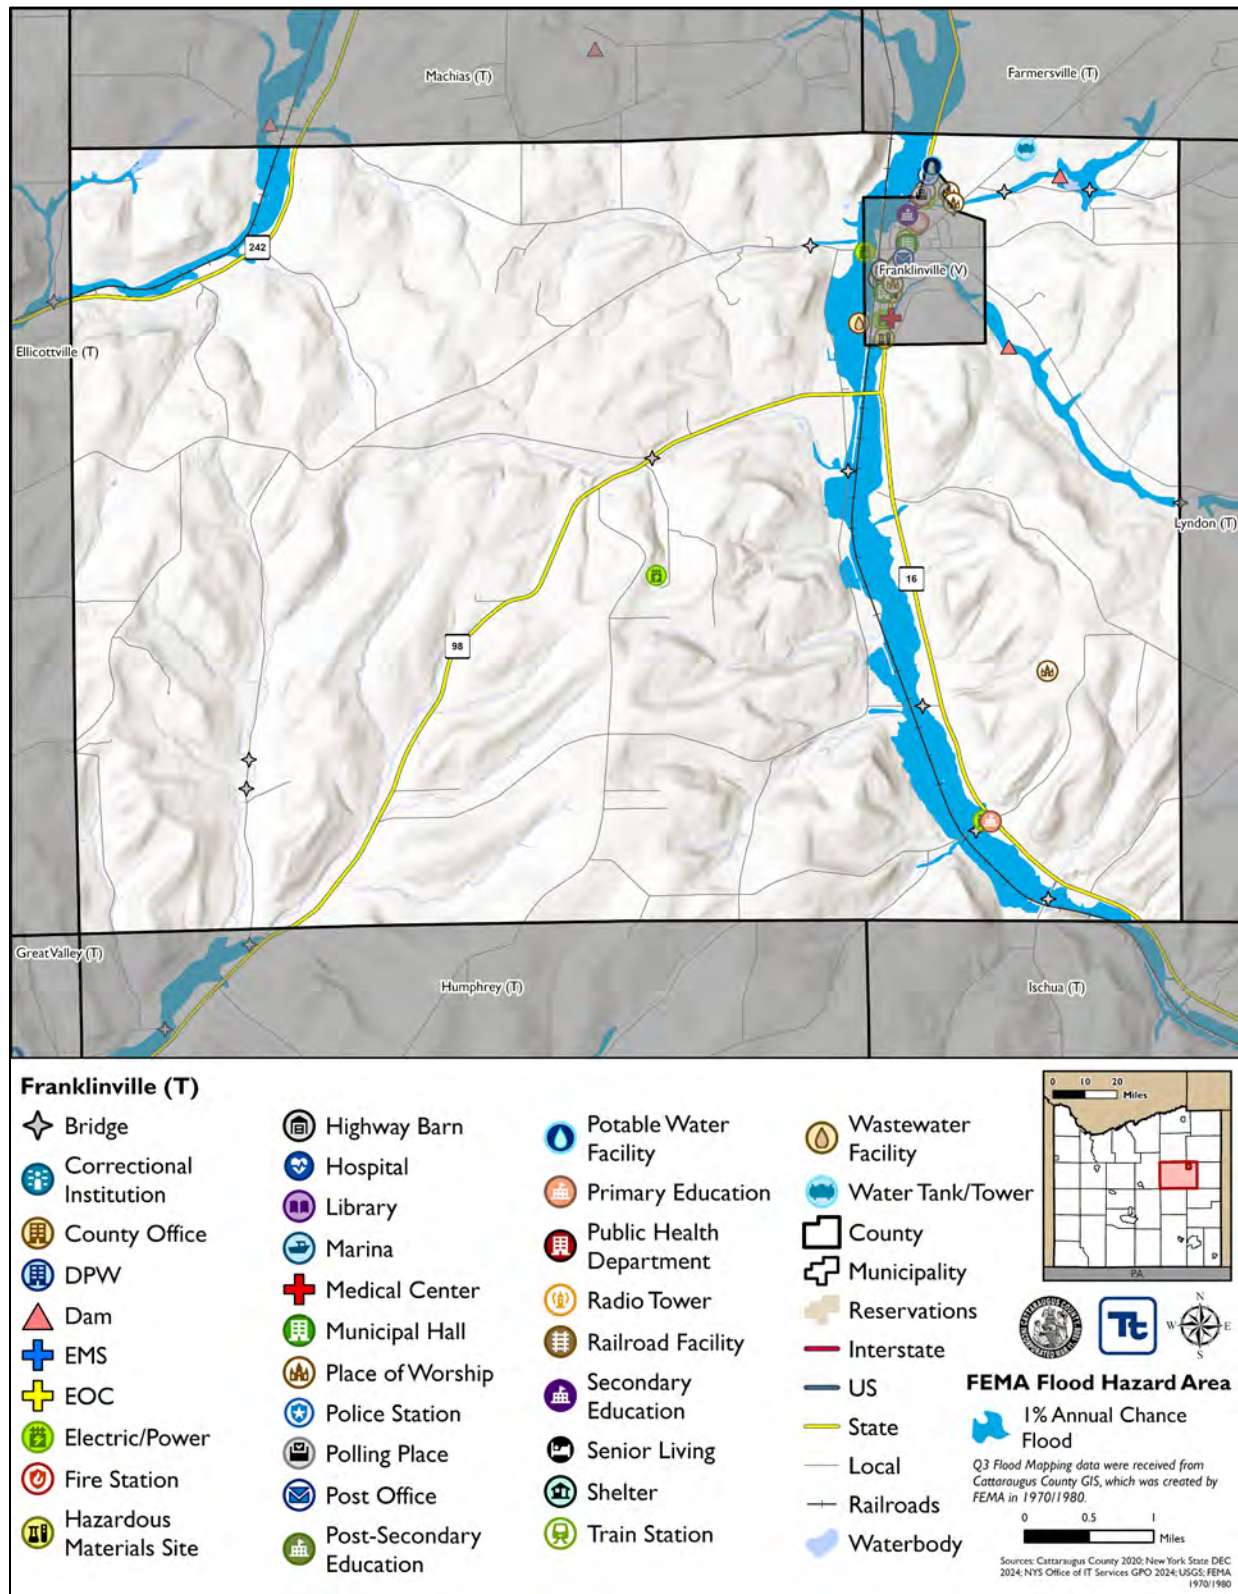

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Franklinville's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

16.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 16-1 through Figure 16-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Franklinville has significant exposure. The maps show the location of potential new development, where available.

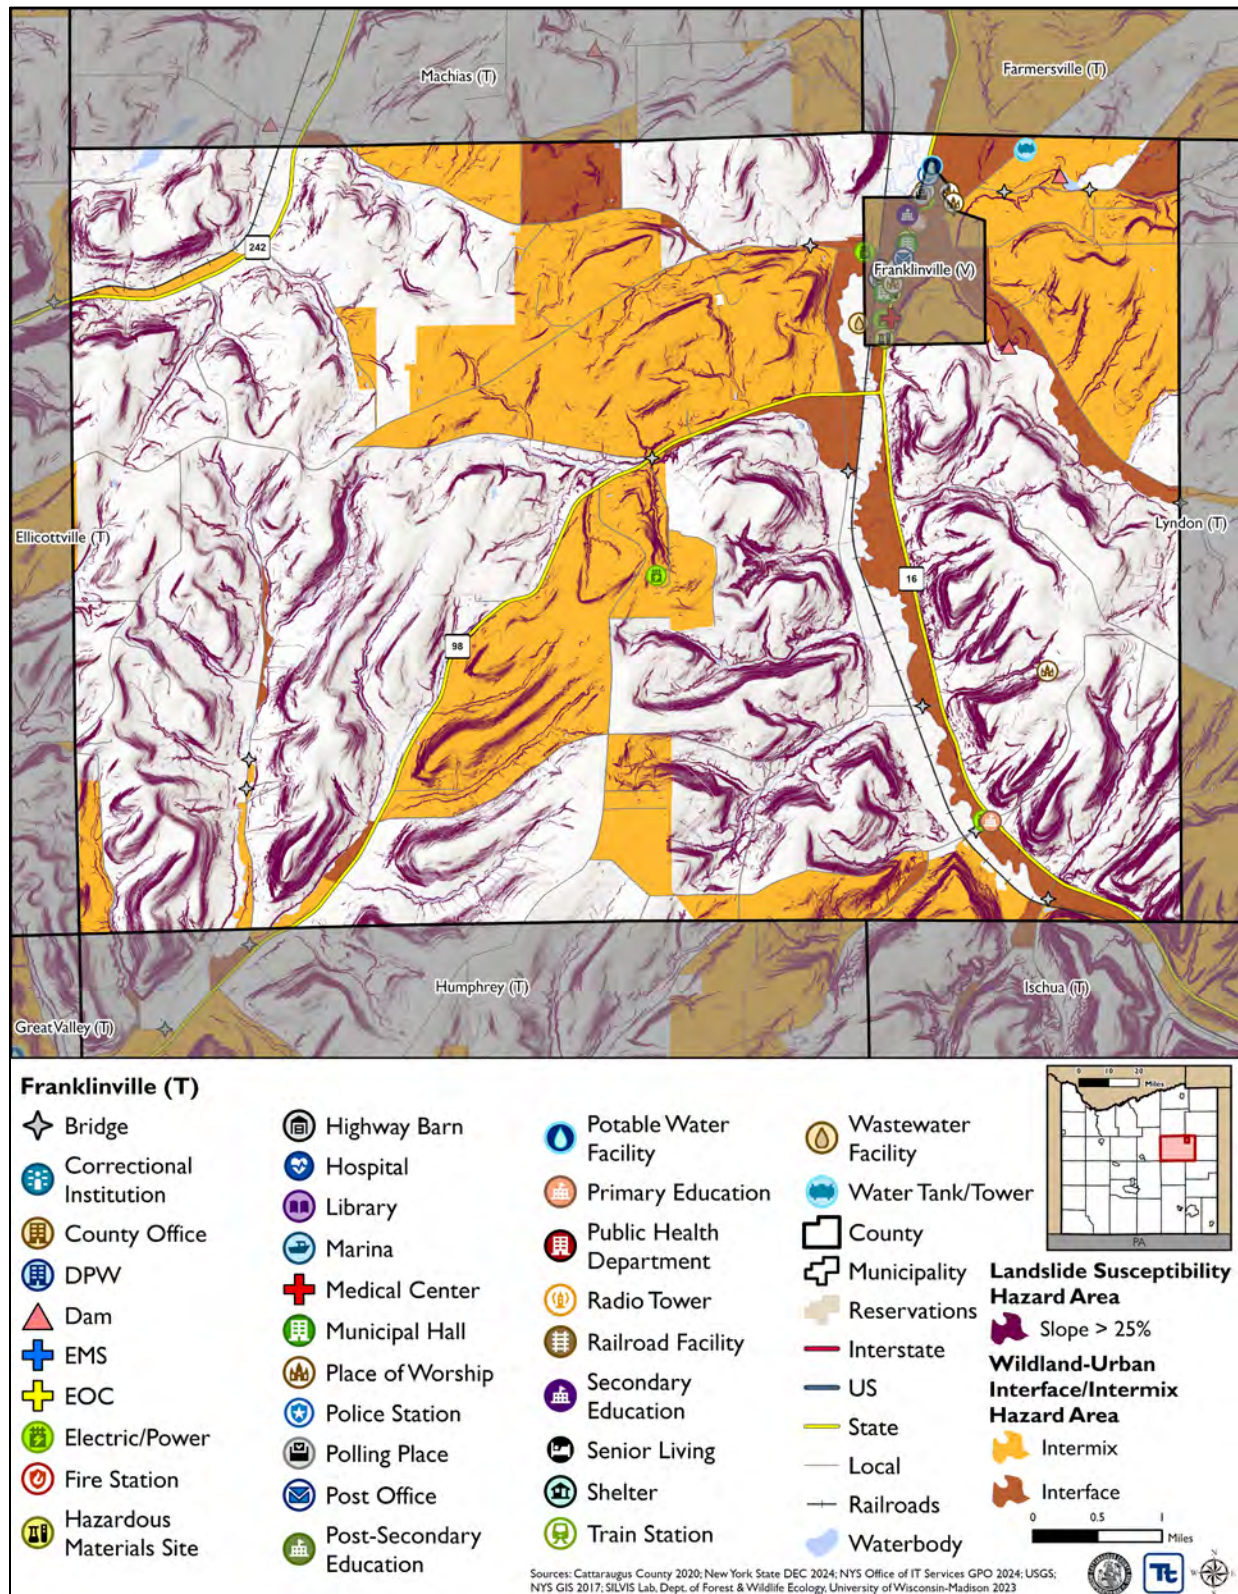

Figure 16-1. Franklinville Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 16-2. Franklinville Landslide and Wildfire Hazard Area Extent and Location Map

16.6.2 Hazard Event History

The history of natural and non-natural hazard events in Franklinville is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 16-14 provides details on loss and damage in Franklinville during hazard events since the last hazard mitigation plan update.

Table 16-14. Hazard Event History in Franklinville

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Franklinville
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur any documented damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town did not incur any documented damage or losses.
January 12, 2020	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur any documented damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur any documented damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur any documented damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur any documented damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur any documented damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not incur any documented damage or losses.
August 19, 2021	Heavy Rain	N/A	The remnants of Tropical Storm Fred resulted in moderate to heavy rainfall.	The Town did not incur any documented damage or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur any documented damage or losses.
February 2-4, 2022	Winter Storm	N/A	A slow changeover from rain to snow occurred, leaving soils unstable.	Public Works Department was called out at night and took a few days to fix ditching which became plugged following a landslide.

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Franklinville
March 6, 2022	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Town did not incur any documented damage or losses.
September 22, 2022	Thunderstorm	N/A	Thunderstorms developed resulting in a few damaging wind gusts.	Trees were reported downed.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Town did not incur any documented damage or losses.
April 1, 2023	Thunderstorm	N/A	Severe thunderstorms produced wind gusts over 60 mph and widespread wind damage.	Trees and wires were downed, which led to power outage.
July 20, 2023	Thunderstorm	N/A	Thunderstorms formed and caused widespread wind damage.	Trees and wires were downed, which led to power outage.
March 10-11, 2024	Winter Storm	N/A	A winter storm with windy conditions lead to 6.4 inches of snow across Cattaraugus County and reported power outages.	Trees and wires were downed, which led to power outage.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

16.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Franklinville .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Franklinville reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town agreed with the preliminary rankings.

Table 16-15 shows Franklinville's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 16-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Medium
Flood	Medium
Landslide	High
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 16-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 16-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event

Village of Franklinville	Wastewater Facility	X	-	2025-FranklinvilleT-01	-

Source: Cattaraugus County 2024

In addition to critical facilities that are exposed to flooding, the following high hazard dams are located in Franklinville:

- Ischua Creek Watershed Dam #4

- Ischua Creek Watershed Dam #6a

16.6.4 Identified Issues

After a review of Franklinville's hazard event history, hazard rankings, hazard location, and current capabilities, Franklinville identified the following vulnerabilities within the community:

- Christian Missionary, New Life Christian School, and the Town Wastewater Facility are located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.
- The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The Town is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.
- Debris, including sediment accumulation, fallen tree branches and limbs, and rubbish, accumulate in waterbodies when heavy rains from severe storms or heavy snowmelt from severe winter storms cause the items to collect and get taken downstream. Morgan Hollow Creek is experiencing debris buildup which increases flood risk. There may be restrictions in place by the Army Corps and NYS DEC for the protection of the waterway.
- Critical facilities require backup power to ensure continuity of operations. The Highway Barn and Fuel Depot do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. The Fuel Depot also serves the Village of Franklinville's DPW and Police. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.
- Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:
 - Cadiz Road
 - Bakerstand Road
 - NYS Route 16
 - NYS Route 98
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a

variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.

- The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- Outdated building codes put new construction at risk during hazard events, as high winds can cause damage to structures, snow loads can impact roofs, and older construction materials may lead a structure to be more susceptible to landslide, severe storm, severe winter storm, and wildfire damages. Swift flowing waters from floods or dam and levee failures can cause structures to buckle or come off its foundation due to the immense pressure.
- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The Town does not have an inventory of roads which may be impacted by landslides, nor is there a local law restricting construction on areas with steep slopes.
- Ischua Creek Watershed Dam #6a is a Class I High Hazard Dam that is located where Gates Creek meets Case Lake. The dam is owned by the County of Cattaraugus. Failure of the dam could result in inundation of residential properties, woodland areas, agricultural and rural lands, recreational areas, and transportation routes including Lyndon Road and Lyndon Center Road. Although the dam was last inspected in 2022, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.
- Ischua Creek Watershed Dam #4 is a Class I High Hazard Dam that is located on the Saunders Creek. The dam is owned by the County of Cattaraugus. Failure of the dam could result in inundation of residential properties, woodland areas, agricultural and rural lands, and transportation routes including Rushford Road. Although the dam was last inspected in 2022, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Franklinville 07
 - Franklinville 14
 - Franklinville 22
 - Franklinville 31
 - Franklinville 34
 - Franklinville 35

16.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

16.7.1 Past Mitigation Action Status

Table 16-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

16.7.2 Additional Mitigation Efforts

Franklinville did not identify any additional mitigation efforts completed since the last HMP.

DRAFT

Table 16-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Town of Franklinville-001	Replace culvert on Clare Valley Road	Flood, Severe Storm	Highway Department	<p>Problem: Undersized pipe overflows in severe storms. Pipe overflows washing out roadway causing hazards to the public on the roads.</p> <p>Solution: The town will install a larger pipe using town equipment and labor. Install new headwalls using precast concrete blocks. Riprap creek banks leading to the pipe and below the pipe and plunge pool.</p>	1. Completed 2. Completed in 2021	1. Discontinue 2. Not applicable 3. Completed in 2021
2020-Town of Franklinville-002	Construct riprap in creek along Raub Road	Flood, Severe Storm	Town Hwy Dept	<p>Problem: The creek along Raub Road is prone to flooding and eroding.</p> <p>Solution: Construct riprap along the roadside of the creek to stabilize creek on Raub Rd.</p>	1. Completed 2. Completed in 2021	1. Discontinue 2. Not applicable 3. Completed in 2021
2020-Town of Franklinville-003	Morgan Hollow Creek debris removal.	Flood	Cattaraugus Soil and Water, Highway Department	<p>Problem: Morgan Hollow creek is experiencing debris buildup which increases flood risk.</p> <p>Solution: Remove debris from stream.</p>	1. In Progress 2. Some debris has been removed from creek.	1. Include 2. Not applicable 3. Not applicable
2020-Town of Franklinville-004	Generator for the Highway Department	All Hazards	Town Hwy Dept	<p>Problem: No backup power for highway barn or fuel depot in the event of a power outage. Fuel depot also serves as the village DPW and police</p> <p>Solution: Change power service to a single service to serve both the highway barn and fuel depot, install 22,000-watt generator, install gas line to generator.</p>	1. No Progress 2. Funding constraints	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Town of Franklinville-005	County Road 17 and Cadiz Road culvert	Flood, Severe Storm	Town Hwy Dept and County	Problem: Flooding happens each spring and during hard rains at County Road 17 and Cadiz Road Solution: Construct culvert to allow for flash flooding events	1. No Progress 2. Financial constraints	1. Include 2. Not applicable 3. Not applicable
2020-Town of Franklinville-006	Cadiz Road and County Road South Route 98 cleaning and culvert	Flood, Severe Storm	Town Hwy Dept and County	Problem: Flooding on Cadiz Road near County Road South Route 98 Solution: Clean creek bed and construct culvert to allow for flash flooding events	1. No Progress 2. Financial constraints	1. Include 2. Not applicable 3. Not applicable
2020-Town of Franklinville-007	Update the Flood Damage Prevention Ordinance	Flood	Town board	Problem: The Town of Franklinville lacks an updated flood damage prevention ordinance. Solution: the town will develop and adopt an updated flood damage prevention ordinance	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable
2020-Town of Franklinville-008	Floodplain Administrator to attend training on floodplain management	Flood	Cattaraugus County Emergency Management/ Cattaraugus County Codes Department	Problem: Floodplain Managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Solution: Obtain/host training and certification for floodplain managers	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable
2020-Town of Franklinville-009	Provide information to residents, business owners, and organizations	Wildfires	Town board	Problem: Additional public education on wildfire risk is needed Solution: the town will develop an outreach program to educate the	1. In Progress 2. Materials placed in Town Hall, need to identify other methods of distribution.	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. 				protect the facility to the 0.2% annual chance flood event.		
2020-Town of Franklinville-013	Protect the Village of Franklinville Wastewater Treatment Plant to the 0.2% annual chance flood event.	Flood	Facilities manager	<p>Problem: The Wastewater Facility is in the special flood hazard area and vulnerable to flooding.</p> <p>Solution: The FPA will work with the Village of Franklinville to discuss the facility's flood exposure and possible mitigation actions to protect the facility to the 0.2% annual chance flood event.</p>	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable
2020-Town of Franklinville-014	Code Enforcement Training	All Hazards	Cattaraugus County	<p>Problem: Officials need additional training for code enforcement</p> <p>Solution: Provide code enforcement training</p>	1. Ongoing Capability 2. Training provided on ongoing, as-needed basis.	1. Discontinue 2. Not applicable 3. Training provided on ongoing, as-needed basis.
2020-Town of Franklinville-015	Update the Emergency Operations Plan.	All Hazards	County, Town	<p>Problem: Outdated Emergency Operations Plan</p> <p>Solution: Update town's Emergency Operation Plan to include current hazards</p>	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable
2020-Town of Franklinville-016	Update Building Code	All Hazards	County, Town	<p>Problem: Building codes are outdated</p> <p>Solution: Update building codes so buildings are built to withstand hazards they face</p>	1. No Progress 2. Town prioritized other projects	1. Include 2. Not applicable 3. Not applicable

16.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Franklinville participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Franklinville would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 16-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 16-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 16-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X	X			X				X	X
Flood	X	X	X	X	X		X	X	X	X
Landslide	X				X					X
Pandemic	X			X			X			X
Severe Storm	X	X	X		X			X	X	X
Severe Winter Storm	X	X			X					X
Utility Failure	X	X							X	X
Wildfire	X			X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 16-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-FranklinvilleT-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Christian Missionary, New Life Christian School, and the Town Wastewater Facility are located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.		
Description of the Solution:	<p>The Town will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the Town will carry out the option.</p>		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget		
Implementation Timeline:	Within 5 Years		
Goals Met:	1, 3, 5		
Benefits:	Ensures continuity of operations of several critical facilities in the Town.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.		
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.		
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.		
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.		
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Relocate facility		Relocation is expensive and results in loss or delay of critical services in the immediate area
	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events		Reduction in response times and delay of critical services in the immediate area.

Action 2025-FranklinvilleT-02. Substantial Damage Management Plan

Lead Agency:	Highway Department										
Supporting Agencies:	Code Enforcement, Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	<p>Officials in NFIP-participating communities are responsible for regulating all development in SFHAs by issuing permits and enforcing local floodplain requirements, including Substantial Damage, for the repairs of damaged buildings. After any disaster event, they must:</p> <ul style="list-style-type: none">• Determine where the damage occurred within the community and if the damaged structures are in an SFHA.• Determine what to use for "market value" and cost to repair; uniformly applying regulations will protect against liability and promote equitable administration.• Determine if repairing plus improving the damaged structure equals or exceeds 50% of the structure's pre-damage value.• Require permits for floodplain development. <p>The Town does not have a Substantial Damage Management Plan in place, nor do they have a formal process in place when conducting substantial damage determinations. The municipality is in need of a formal process and plan to provide a framework for conducting such inspections and determinations.</p>										
Description of the Solution:	The Town will develop a Substantial Damage Management Plan, following the six-step planning process in 2021 Developing a Substantial Damage Management Plan (https://crsresources.org/files/500/developing_subst_damage_mgmt_plan.pdf). This plan will outline responsibilities for Substantial Damage determinations, determining market value, and permit approval processes following a disaster event.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	This action will provide a guidance document to determine substantial damage in the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations may disproportionately be impacted by substantial damages.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Not applicable										
Impact on Capabilities:	This action will produce substantial damage guidance for Town officials to use.										
Climate Change Considerations:	Climate change is leading to an increase in frequency and intensity of precipitation events, which also increases flooding and may lead to a main failure.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources following disaster events</td><td>Resources may not be available during major widespread events</td></tr><tr><td>Establish MOUs with outside agencies to conduct Substantial Damage Determinations</td><td>A plan outlining responsibility is still necessary to prevent missing important requirements</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources following disaster events	Resources may not be available during major widespread events	Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources following disaster events	Resources may not be available during major widespread events										
Establish MOUs with outside agencies to conduct Substantial Damage Determinations	A plan outlining responsibility is still necessary to prevent missing important requirements										

Action 2025-FranklinvilleT-03. Debris Removal

Lead Agency:	Highway Department		
Supporting Agencies:	Town Board, NYS DEC, USACE		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Debris, including sediment accumulation, fallen tree branches and limbs, and rubbish, accumulate in waterbodies when heavy rains from severe storms or heavy snowmelt from severe winter storms cause the items to collect and get taken downstream. Morgan Hollow Creek is experiencing debris buildup which increases flood risk. There may be restrictions in place by the Army Corps and NYS DEC for the protection of the waterway.		
Description of the Solution:	The Highway Department will assess the feasibility and cost-effectiveness of a debris maintenance/removal program to prevent future flooding surrounding Morgan Hollow Creek. The Town will work with USACE and NYS DEC to obtain any necessary permitting for debris removal.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, Town Budget, NYS DEC		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 2		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage to properties. The natural ecosystem is cleaned and can return to a thriving habitat.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development along or near Morgan Hollow Creek will have its risk of flood impacts reduced.		
Impact on Critical Facilities/Lifelines:	Not applicable		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action removed debris from waterways, reducing the risk of back-flooding from debris pile-ups.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input checked="" type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input checked="" type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Elevate nearby roads		Cost prohibitive
	Acquire all properties which flood		Cost prohibitive

Action 2025-FranklinvilleT-04. Generators at Critical Facilities

Lead Agency:	Engineering		
Supporting Agencies:	Town Board, Highway Department		
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Critical facilities require backup power to ensure continuity of operations. The Highway Barn and Fuel Depot do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. The Fuel Depot also serves the Village of Franklinville's DPW and Police. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.		
Description of the Solution:	The Town Engineer will conduct a study to determine the required generator capacity to support the critical facility. The Town will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for the critical facilities and their operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.		
Estimated Cost:	High		
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4, 5		
Benefits:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.		
Impact on Future Development:	This action results in protection of critical facilities that could support future development.		
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of critical facilities and their essential functions during a power outage.		
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.		
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives	Action		Evaluation
	No Action		-
	Microgrid		Costly and difficult to implement.
	Solar panels and battery backup		Solar power is unlikely to be able to provide battery power for extended power failure events.

Action 2025-FranklinvilleT-05. Floodprone Roads

Lead Agency:	Highway Department										
Supporting Agencies:	Code Enforcement, Engineering, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	<p>Flood prone roads not only interrupt the movement of persons and goods but can lead to isolation issues where first responders are unable to reach their destination and cause evacuation routes to be inaccessible. Flooded road ways may be caused by debris in culverts from severe storms and severe winter storms. There are multiple roads in Town which may benefit from flood mitigation strategies, such as the elevation of the roadways or the hardening of the infrastructure surrounding them to reduce likelihood of flooding including:</p> <ul style="list-style-type: none">• Cadiz Road• Bakerstand Road• NYS Route 16• NYS Route 98										
Description of the Solution:	<p>The Town will develop specific mitigation solutions for flood-prone road systems after conducting a flood study. Possible solutions may include:</p> <ul style="list-style-type: none">• Elevation of roadways• Installation or improvement of drainage systems• Regrading of roadway and soils• Resurfacing or reshaping roadways										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Town Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by flooding along flood-prone roads.										
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate all flood-prone road system</td><td>Not feasible</td></tr><tr><td>Raise all flood prone roads</td><td>Cost prohibitive</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Relocate all flood-prone road system	Not feasible	Raise all flood prone roads	Cost prohibitive		
Action	Evaluation										
No Action	Current problem exists										
Relocate all flood-prone road system	Not feasible										
Raise all flood prone roads	Cost prohibitive										

Action 2025-FranklinvilleT-06. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.		
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will update and adopt the Flood Damage Prevention Ordinance.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 3 years		
Goals Met:	1, 2, 4		
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.		
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.		
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.		
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.		
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.		
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Update only freeboard requirements		Other areas of the ordinance which need to be updated would not be
	Leave NFIP		Residents lose flood insurance coverage

Action 2025-FranklinvilleT-07. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.		
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-FranklinvilleT-08. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-FranklinvilleT-09. Comprehensive Emergency Management Plan Update

Lead Agency:	Town Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town has an outdated Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Town will update the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Town will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Town will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Town to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Town performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will update a planning and response capability for the Town.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Town CEMP will remain undeveloped</td> </tr> </tbody> </table>		Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped	
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Town CEMP will remain undeveloped										

Action 2025-FranklinvilleT-10. Review and Revise Building Codes

Lead Agency:	Code Enforcement										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Outdated building codes put new construction at risk during hazard events, as high winds can cause damage to structures, snow loads can impact roofs, and older construction materials may lead a structure to be more susceptible to landslide, severe storm, severe winter storm, and wildfire damages. Swift flowing waters from floods or dam and levee failures can cause structures to buckle or come off its foundation due to the immense pressure.										
Description of the Solution:	The Town will review and revise building codes to integrate hazard mitigation principles to create a more resilient community. The Town will also use available tools and resources from FEMA and other sources to integrate climate adaptation planning such as FEMA's "Climate Adaptation Planning: Guidance for Emergency Managers" document. Updated building codes will meet the minimum requirements set by the State.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	4 years										
Goals Met:	1, 4										
Benefits:	Mitigation considerations being taken when developing or updating building and zoning codes can lessen the risk of damage from a hazard event and increase overall community resiliency.										
Impact on Socially Vulnerable Populations:	Communities that collaborate and coordinate their regulatory efforts are more likely to have identified ways to best work with vulnerable populations to increase their level of preparedness.										
Impact on Future Development:	Updated building and zoning codes ensure that any new development that does take place is built to the safest standards based upon the best available data.										
Impact on Critical Facilities/Lifelines:	Integrating mitigation into building and zoning protects existing infrastructure and guides the safe development of new construction.										
Impact on Capabilities:	A consolidated review process brings together the capabilities of agencies and departments and better identifies what resources are available at any given point in time and where they are needed most.										
Climate Change Considerations:	As the climate changes, regulatory processes will require a more intense focus on maintenance and gathering of the best data to remain current and accurate over time. The Town will use available tools and resources from FEMA and other sources to integrate climate adaptation planning such as FEMA's "Climate Adaptation Planning: Guidance for Emergency Managers" document.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)

Adopt building code without integrating hazard mitigation principles	Will not increase Town's resiliency										

Action 2025-FranklinvilleT-11. Pandemic Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance

No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-FranklinvilleT-12. Steep Slope Ordinance

Lead Agency:	Code Enforcement										
Supporting Agencies:	Engineering, Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. The Town does not have an inventory of roads which may be impacted by landslides, nor is there a local law restricting construction on areas with steep slopes.										
Description of the Solution:	The Town Engineer will complete an assessment to identify roads in Town which have slopes at grades greater than 20 percent. Once identified, Code Enforcement will work with Engineering and the Town Board to develop a local law restricting future development in these identified hazard areas.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, Town Budget										
Implementation Timeline:	3 years										
Goals Met:	1, 4, 6										
Benefits:	This action will identify locations with steep grades (above 20 percent) and lead to the adoption of a local law to restrict future development in these hazard areas. Furthermore, the identification of the locations with the steep grades will provide the Highway Department and Engineer with future locations to implement mitigation measures to protect any nearby property and infrastructure.										
Impact on Socially Vulnerable Populations:	This action may identify socially vulnerable populations whose properties may be at risk to the landslide hazard. If identified, the Town may educate the populations on how to mitigate potential risks.										
Impact on Future Development:	Future development will be restricted in locations with identified steep slopes.										
Impact on Critical Facilities/Lifelines:	This action has the potential to identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Town's regulatory capabilities.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Restrict development on slopes greater than 5 percent grade</td><td>May be too restrictive and discourage any future development</td></tr><tr><td>Create inventory but do not develop local law</td><td>Would not restrict future development, could increase at risk properties and structures</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Restrict development on slopes greater than 5 percent grade	May be too restrictive and discourage any future development	Create inventory but do not develop local law	Would not restrict future development, could increase at risk properties and structures

Restrict development on slopes greater than 5 percent grade	May be too restrictive and discourage any future development										
Create inventory but do not develop local law	Would not restrict future development, could increase at risk properties and structures										

Action 2025-FranklinvilleT-13. Ischua Creek Watershed Dam #6 Rehab

Lead Agency:	County of Cattaraugus										
Supporting Agencies:	County Engineer, County OES, NYDEC, Municipal Engineer										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Ischua Creek Watershed Dam #6a is a Class I High Hazard Dam that is located where Gates Creek meets Case Lake. The dam is owned by the County of Cattaraugus. Failure of the dam could result in inundation of residential properties, woodland areas, agricultural and rural lands, recreational areas, and transportation routes including Lyndon Road and Lyndon Center Road. Although the dam was last inspected in 2022, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.										
Description of the Solution:	The Municipal Engineer will work with the County of Cattaraugus to complete an engineering study of Ischua Creek Watershed Dam #6a. The Town will also request information and input from its Highway department and the County regarding impacted roadways. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Town and the County of Cattaraugus will pursue funding support, permit approval from NYSDEC, and implement the cost-effective measures.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, HHPD										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3, 4, 6, 7										
Benefits:	This action will improve the safety and security of those who live within the dam inundation areas of the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within the Special Flood Hazard Area and inundation areas where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	Future development located in or near the dam inundation area will be further protected from a dam failure event.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event due to projected increases in precipitation. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Decommission Dam	High cost, flood risk for nearby infrastructure increased, loss an environmental, flood control, and stormwater management resource.										
Elevate nearby structures	Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions										

Action 2025-FranklinvilleT-14. Ischua Creek Watershed Dam #4 Rehab

Lead Agency:	County of Cattaraugus										
Supporting Agencies:	County Engineer, County OES, NYDEC, Municipal Engineer										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Ischua Creek Watershed Dam #4 is a Class I High Hazard Dam that is located on the Saunders Creek. The dam is owned by the County of Cattaraugus. Failure of the dam could result in inundation of residential properties, woodland areas, agricultural and rural lands, and transportation routes including Rushford Road. Although the dam was last inspected in 2022, the risk of dam failure warrants an engineering evaluation to determine if retrofits of the dam would result in safer conditions.										
Description of the Solution:	The Municipal Engineer will work with the County of Cattaraugus to complete an engineering study of Ischua Creek Watershed Dam #4. The Town will also request information and input from its Highway department and the County regarding impacted roadways. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Town and the County of Cattaraugus will pursue funding support, permit approval from NYSDEC, and implement the cost-effective measures.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, HHPD										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 3, 4, 6, 7										
Benefits:	This action will improve the safety and security of those who live within the dam inundation areas of the dams and increase the resilience of responding agencies.										
Impact on Socially Vulnerable Populations:	The action will result in better preparedness within the Special Flood Hazard Area and inundation areas where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	Future development located in or near the dam inundation area will be further protected from a dam failure event.										
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for the dam and strengthen the structural integrity of dam, as needed.										
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event due to projected increases in precipitation. This action will increase the capabilities to respond to these events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem continues</td></tr><tr><td>Decommission Dam</td><td>High cost, flood risk for nearby infrastructure increased, loss an environmental, flood control, and stormwater management resource.</td></tr><tr><td>Elevate nearby structures</td><td>Very high cost and likely not feasible for commercial properties. Elevate nearby structures	Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions
Action	Evaluation										
No Action	Current problem continues										
Decommission Dam	High cost, flood risk for nearby infrastructure increased, loss an environmental, flood control, and stormwater management resource.										
Elevate nearby structures	Very high cost and likely not feasible for commercial properties. Will not reduce potential for dam failure due to poor dam conditions										

Action 2025-FranklinvilleT-15. Bridge Evaluations

Lead Agency:	Highway Department										
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary: <ul style="list-style-type: none"> • Ellicottville 01 • Ellicottville 53 • Ellicottville Bridge 2 										
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.										
Impact on Socially Vulnerable Populations:	Not applicable										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.										
Impact on Capabilities:	Not applicable										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

17. VILLAGE OF FRANKLINVILLE

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Village of Franklinville with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Franklinville, describes who participated in the planning process, assesses Franklinville's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

17.1 HAZARD MITIGATION PLANNING TEAM

The Village of Franklinville identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Village departments. The Highway Superintendent represented the community on the Cattaraugus County HMP Steering Committee supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 17-1 summarizes Village officials who participated in the development of the annex and in what capacity. Additional documentation of the Village's planning activities through Steering Committee meetings is included in Volume I.

Table 17-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Cary Hatch, Highway Superintendent Address: 19 Pennsylvania Ave., Franklinville, NY 14737 Phone Number: (716) 670-5703 Email: chatch@franklinvilleny.org	Name/Title: Patricia Sage, Clerk Address: 19 Pennsylvania Ave., Franklinville, NY 14737 Phone Number: (716) 676-3010 Email: villageclerk@franklinvilleny.org
National Flood Insurance Program Floodplain Administrator	
Name/Title: John Helgager, Code Enforcement Officer Address: 19 Pennsylvania Ave., Franklinville, NY 14737 Phone Number: (716) 676-3067 Email: villagecode@franklinvilleny.org	

17.2 COMMUNITY PROFILE

The Village of Franklinville is located in the Town of Franklinville in Cattaraugus County in western New York State. The Village of Franklinville has a total area of 1.10 square miles. The village is located in Ischua Valley. Part of the Allegany River watershed flows past the west side of the village. Gates Creek joins Ischua Creek south of the village, and Saunders Creek joins it north of the village. The village is on conjoined NY-16 and NY-98.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 7.7 percent of the

population is 5 years of age or younger, 16.5 percent is 65 years of age or older, 0 percent is non-English speaking, 16.6 percent is below the poverty threshold, and 18.4 percent is considered disabled.

17.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Franklinville performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Franklinville to identify opportunities for integrating mitigation concepts into ongoing Village procedures.

17.3.1 Planning and Regulatory Capability and Integration

Table 17-2 summarizes the planning and regulatory tools that are available to Franklinville.

Table 17-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Chapter 150: Building Codes	State and Local	Code Enforcement
How has or will this be integrated with the HMP and how does this reduce risk?				
This chapter provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code) and the State Energy Conservation Construction Code (the Energy Code) in this village. This chapter is adopted pursuant to N.Y. Mun. Home Rule Law § 10. Except as otherwise provided in the Uniform Code, other state law, or other section of this chapter, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions of this chapter.				
Zoning/Land Use Code	Yes	Chapter 152: Zoning	Local	Code Enforcement
How has or will this be integrated with the HMP and how does this reduce risk?				
For the purpose of promoting the public health, safety, morals, comfort and general welfare; conserving and protecting property and property values; securing the most appropriate use of land; lessening or avoiding congestion in the public streets and highways; and facilitating adequate but economical provision of public improvements, all in accordance with				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------	--	---	--

a comprehensive plan, the Village Board finds it necessary and advisable to regulate the location, size and use of buildings and other structures percentages of lot area which may be occupied; setback building lines; sizes of yards, courts and other open spaces; and the use of land for trade, industry, residences, recreation or other purposes, and for that purpose, divides the incorporated area of the village into districts or zones.

Subdivision Code	No	-	-	-
-------------------------	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Site Plan Code	Yes	Chapter 152: Zoning, Section 152.086: Site Plan Approval	Local	Board of Trustees
-----------------------	-----	--	-------	-------------------

How has or will this be integrated with the HMP and how does this reduce risk?

Except as provided herein, it shall be unlawful for an owner to use or to permit the use of any structure or land or part thereof, hereafter created, erected, changed, converted or enlarged, wholly or partly, until an application is made to, and a site plan approval issued by, the Board of Trustees. Where the approval of the County Department of Health or other authority is required, a building permit shall not be issued until the approval has been granted in writing. A site plan approval hereafter granted under the provisions of this chapter shall expire two years from the date of issuance unless the proposed structure or change in use has been completed, unless the site plan approval has been extended by the Board of Trustees.

Stormwater Management Code	No	-	-	-
-----------------------------------	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
--	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
--	-----	--	-------	--

How has or will this be integrated with the HMP and how does this reduce risk?

In addition to facing potential liability for failing to disclose under the exceptions to "caveat emptor," a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.

Growth Management	No	-	-	-
--------------------------	----	---	---	---

How has or will this be integrated with the HMP and how does this reduce risk?

Environmental Protection Ordinance(s)	Yes	Chapter 94: Trees and Shrubs	Local	Board of Trustees
--	-----	------------------------------	-------	-------------------

How has or will this be integrated with the HMP and how does this reduce risk?

Chapter 94: Trees and Shrubs - The Board of Trustees finds and declares that the village enjoys a heritage of trees and other vegetation that is now threatened by external social forces, neglect and the lack of a directed effort to provide reliable information and financial resources to village residents about the care, maintenance, removal and replacement of trees and vegetation. It is the purpose of this subchapter to promote a comprehensive forestry program within the village to assure a positive benefit from village trees planned and managed with adequate recognition of the physical, biotic and social surroundings in which they are encouraged to grow and provide their benefits; trees can serve as a vital link between village residents and their environment, if properly planned and managed; growing site limitations in the village for trees and associated plants are frequent and recurrent problems because of highway and street widening, sidewalk reconstruction, air pollution, modified drainage, erosion, soil fertility depletion, insects and disease, mechanical hazards and other adverse influences resulting from concentrated use of land; an improved and expanded village tree program for planting and maintenance of trees and associated vegetation within the village would help make the village

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------------	--	---	---

a more pleasant and healthful place to live, work and visit; and trees are an important economic asset and resource to the village by increasing land values and by modifying extremes of temperature, humidity and winds and thereby have an important role in reducing the amount of energy consumed in heating and cooling many village buildings and homes.

Flood Damage Prevention Ordinance	Yes	Chapter 153: Flood Damage Prevention	Local	Code Enforcement
--	-----	--------------------------------------	-------	------------------

How has or will this be integrated with the HMP and how does this reduce risk?

Promotes public health, safety, and general welfare, and to minimize public and private losses due to flood conditions in specific areas.

A. Regulate uses which are dangerous to health, safety and property due to water or erosion hazards or which result in damaging increases in erosion or in flood heights or velocities.

B. Require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction.

C. Control the alteration of natural floodplains, stream channels and natural protective barriers which are involved in the accommodation of floodwaters.

D. Control filling, grading, dredging and other development which may increase erosion or flood damages.

E. Regulate the construction of flood barriers which will unnaturally divert floodwaters, or which may increase flood hazards to other lands.

F. Qualify for and maintain participation in the National Flood Insurance Program.

Public Health Plan	Yes	Health Department Strategic Plan 2022–2025	County	Health Department
How has or will this be integrated with the HMP and how does this reduce risk? The Cattaraugus County Health Department's (CCHD) Strategic Planning Process began in April 2022 using the resources of the New York State Department of Health NYS Public Health Corp Fellows. As a part of this process, the fellows reviewed the 2018–2021 strategic plan for past successes and failures and discussed what was needed for future success. Both an external assessment, in which county demographic data, economic factors, health outcomes, and community health assessment findings that have the potential to affect the agency and strategies were examined, and an internal assessment of a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis was completed.				
Other: Community Needs Assessment and Community Health Improvement Plan	Yes	Community Needs Assessment and Community Health Improvement Plan	County	Health Department
How has or will this be integrated with the HMP and how does this reduce risk? The 2022–2024 OGH/BRMC Community Service Plan (CSP) and the CCHD's Community Health Assessment and Community Health Improvement Plan (CHA-CHIP) were conducted to identify significant health needs as outlined by the New York State Department of Health's 2022–2024 Prevention Agenda, where applicable. It also provides critical information OGH/BRMC, the CCHD, and others in a position to make a positive impact on the health of the region's residents. The CSP/CHA-CHIP enables the health department, hospital, and other community partners to strategically establish priorities, develop interventions, and direct resources to improve the health of residents living in the service area. The CSP/CHA-CHIP includes a detailed examination of priority areas identified in the NYS Prevention Agenda: (1) prevent chronic diseases; (2) promote a healthy and safe environment; (3) promote healthy women, infants and children; (4) promote well-being and prevent mental health and substance use disorders; and (5) prevent communicable diseases. The Prevention Agenda is a six-year effort to make New York the healthiest state. Developed in collaboration				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------	--	---	--

with 140 organizations, the plan identifies New York's most urgent health concerns, and suggests ways local health departments, hospitals, and partners from health, business, education, and community organizations can work together to solve them.

17.3.2 Development and Permitting Capability

Table 17-3 summarizes the capabilities of Franklinville to oversee and track development.

	Yes/No	Comment
Do you issue development permits?	Yes	Code Enforcement
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 		
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	Floodplain
Do you have a buildable land inventory?	No	-
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 		
Describe the level of buildout in your jurisdiction.	N/A	20%

17.3.3 Administrative and Technical Capability

Table 17-4 summarizes potential staff and personnel resources available to Franklinville and their current responsibilities that contribute to hazard mitigation.

Table 17-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	No	County
Zoning Board of Adjustment	Yes	The Zoning Board of Appeals is authorized to hear and review appeals and variances. The Board is given the power to grant or deny variances and special permits, and to interpret the provisions of the Village Zoning Law. The Zoning Board is required to consider all technical evaluations, relevant factors and specified standards while making an informed decision. The Board may attach conditions to approvals based upon the Village Code.
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	The Public Works Department consists of five fulltime employees, including a full-time water/wastewater operator to safely operate both systems. The department is responsible for treating and distributing clean water, receiving and treating wastewater, street and sidewalk construction and repair, parks maintenance, building maintenance, and various other tasks that arise throughout the day. The Department of Public Works is responsible for maintaining 7 miles of streets in the Village of Franklinville. DPW crews routinely plow and repair streets, clean and repair/replace street signs and manage the Village streets to protect the public and maintain an efficient transportation infrastructure for the Village's residents and businesses.
Construction/Building/Code Enforcement Department	Yes	The Code Enforcement department assists residents and property owners in the Village with complying with the zoning codes and regulations of our municipality and enforcement of the New York State Property Maintenance, Fire Prevention and Building Codes.
Emergency Management/Public Safety Department	Yes	Mayor
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	Yes	<p>The Village is responsible for all trees on Village owned property and shares the responsibility with property owners within the street right-of-way. If you feel there is a problem with a tree in these areas, please submit the contact form so we can inspect the tree and take the appropriate action.</p> <p>Actions taken include trimming, which doesn't cost the adjacent property owner anything, and removal. If the Village's consulting forester and tree professional determines the tree is a safety hazard and needs to be removed, the village will make the necessary arrangements, and the adjacent property owner will be responsible for half the removal cost (per §94.41). If the property owner chooses to hire a contractor on their own, the village will pay up to half of the cost, not to exceed what the village's contractor would charge.</p>
Mutual aid agreements	No	-
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other: Tree Commission	Yes	The Tree Commission works in conjunction with the DPW to maintain the health of village trees. Dangerous, dead, or dying trees are removed, and the commissioners decide where replacement trees will be planted.
TECHNICAL/STAFFING CAPABILITY		

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

17.3.4 Fiscal Capability

Table 17-5 summarizes financial resources available to Franklinville.

Table 17-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	No
Authority to levy taxes for specific purposes	Yes
User fees for water, sewer, gas, or electric service	Yes
Impact fees for homebuyers or developers of new development/homes	Yes
Stormwater utility fee	No
Incur debt through general obligation bonds	Yes
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Other federal or state funding programs	No
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

17.3.5 Education and Outreach Capability

Table 17-6 summarizes the education and outreach resources available to Franklinville.

Table 17-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	Yes	Mayor
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	Yes	Website and Facebook
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	Yes	Constant Contact platform, used to send text message notifications informing residents of different events e.g., water service interruptions, street closures, community events, annual celebrations, etc. to residents
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

17.3.6 Community Classifications

Table 17-7 summarizes classifications for community programs available to Franklinville.

Table 17-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

17.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 17-8 summarizes the adaptive capacity for each identified hazard of concern and the Village’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 17-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Moderate

17.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 17-1 is responsible for maintaining this information.

17.4.1 NFIP Statistics

Table 17-9 summarizes the NFIP policy and claim statistics for Franklinville.

Table 17-9. Franklinville NFIP Summary of Policy and Claim Statistics

# Policies	4
# Claims (Losses)	1
Total Loss Payments	\$7,186.93
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

17.4.2 Flood Vulnerability Summary

Table 17-10 provides a summary of the NFIP program in Franklinville.

Table 17-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Flooding in the Village is limited to within the SFHA
Do you maintain a list of properties that have been damaged by flooding?	No
Do you maintain a list of property owners interested in flood mitigation?	No
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	Zero
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Inspection performed by Code Office
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	Zero
How many properties have been mitigated (elevation or acquisition) in your jurisdiction? If there are mitigation properties, how were the projects funded?	Zero
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS

NFIP Topic	Comments
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Site Plan Review
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: Not applicable CAV: May 12, 2009
What is the local law number or municipal code of your flood damage prevention ordinance?	Chapter 153: Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	April 13, 1987
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Site Plan Review
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

17.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 17-11 through Table 17-13.

Table 17-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2021				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2022				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2023				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 17-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
There has been no recent major development or infrastructure between 2019 to present.					
* Only location-specific hazard zones or vulnerabilities identified.					

Table 17-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
There are no known or anticipated major development or infrastructure in the next five years.					

17.6 JURISDICTIONAL RISK ASSESSMENT

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Franklinville's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

17.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Village are shown in Figure 17-1 through Figure 17-2. These maps are based on the best available data at the time of the preparation

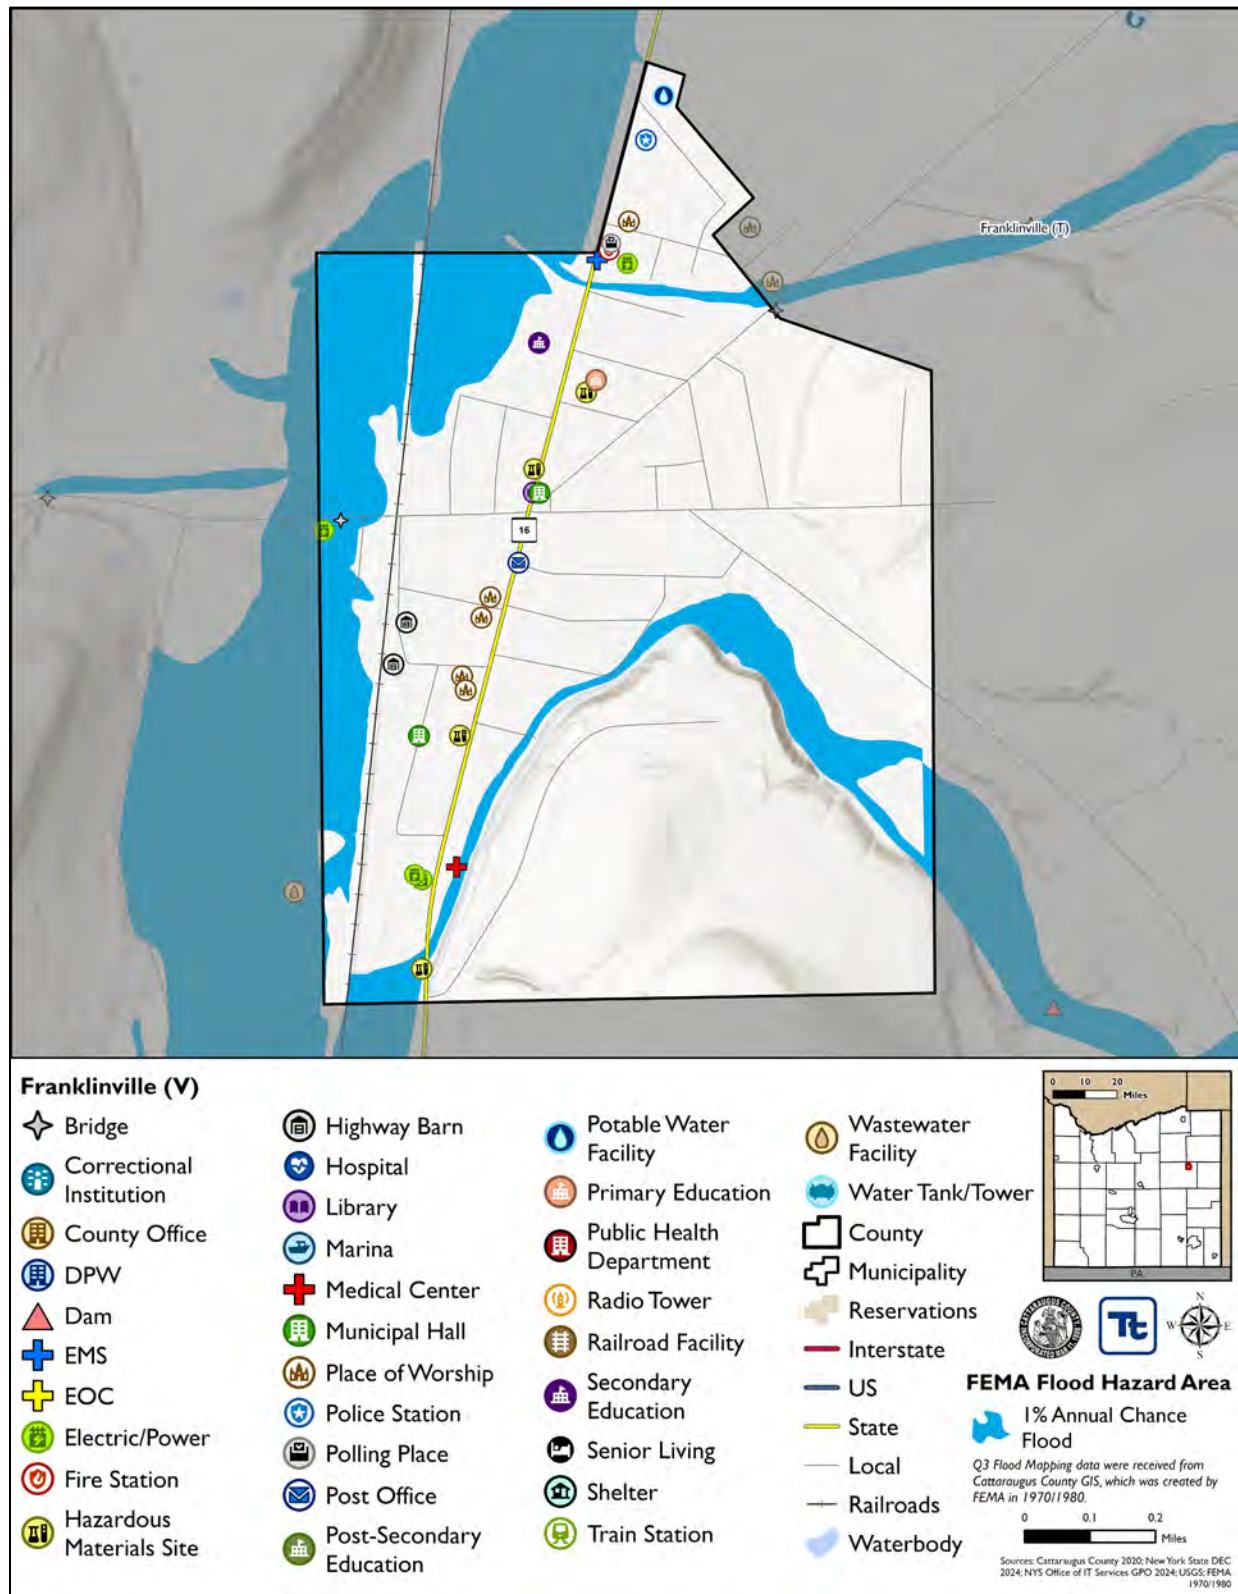

of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Franklinville has significant exposure. The maps show the location of potential new development, where available.

DRAFT

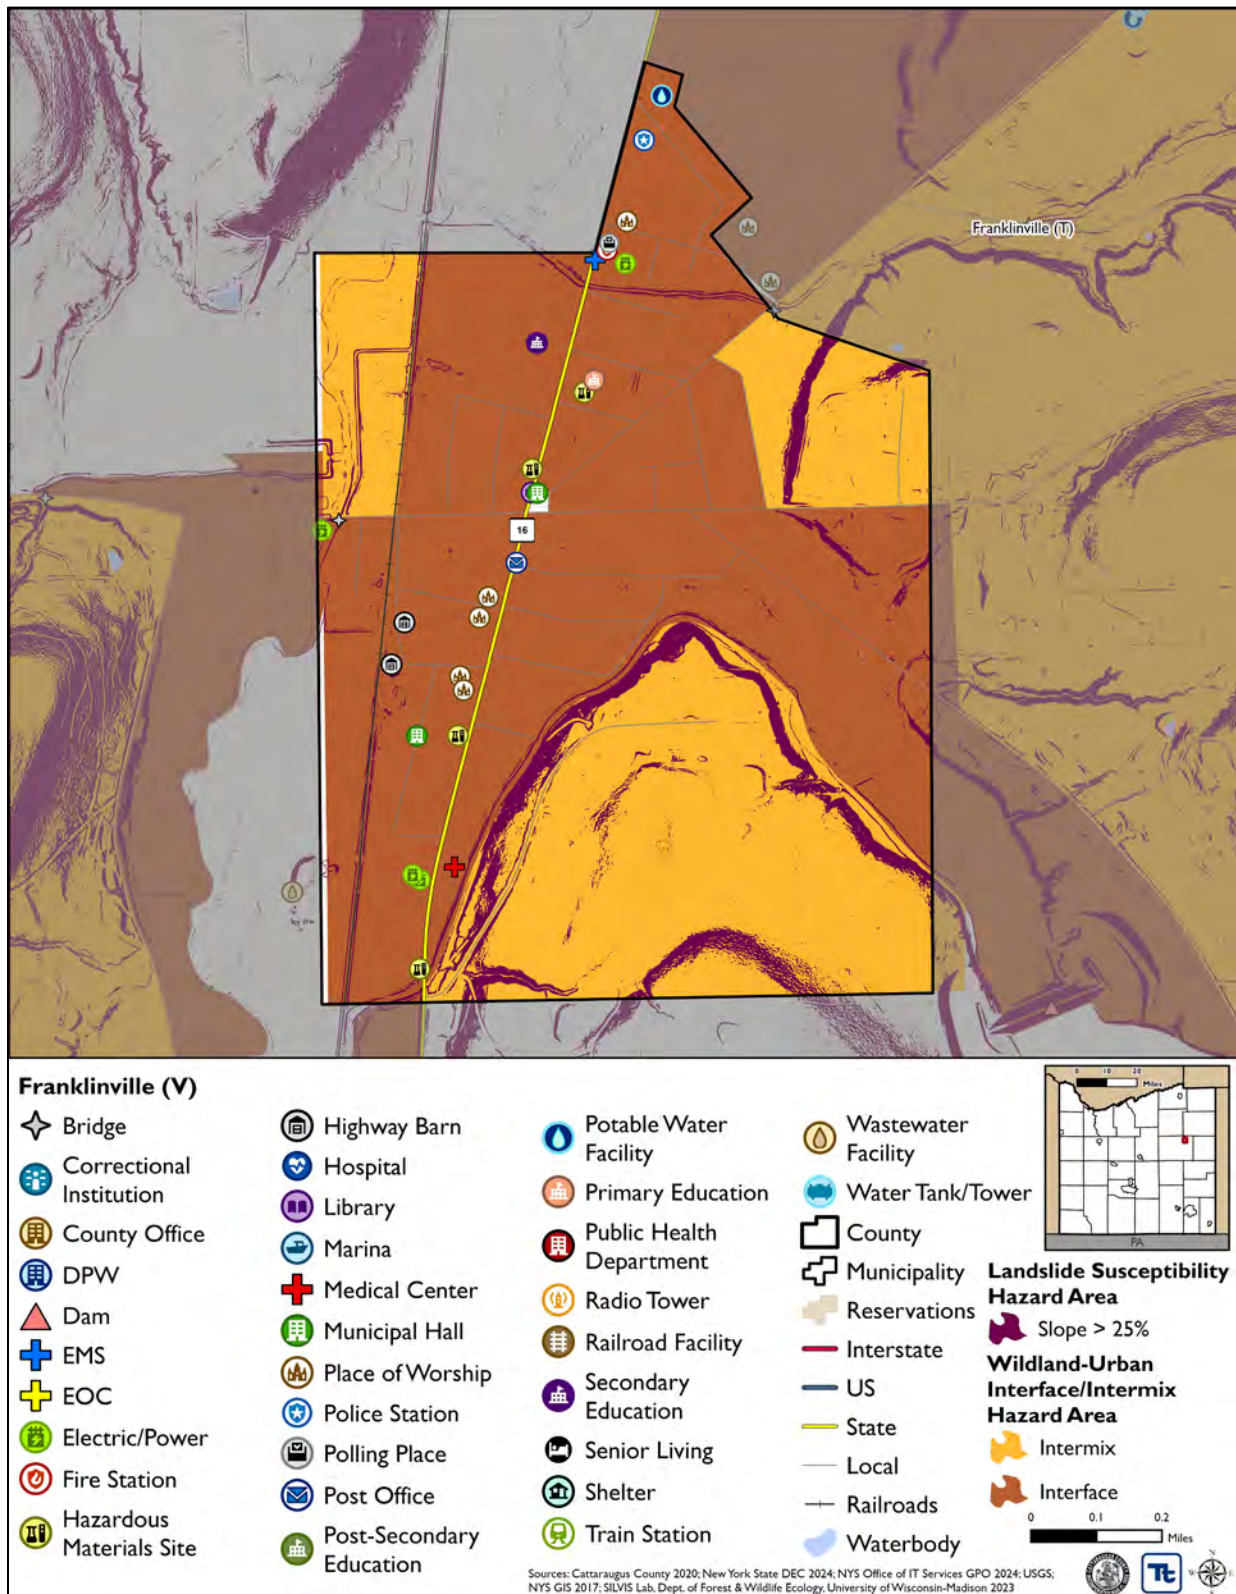

Figure 17-1. Franklinville Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 17-2. Franklinville Landslide and Wildfire Hazard Area Extent and Location Map

17.6.2 Hazard Event History

The history of natural and non-natural hazard events in Franklinville is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 17-14 provides details on loss and damage in Franklinville during hazard events since the last hazard mitigation plan update.

Table 17-14. Hazard Event History in Franklinville

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Franklinville
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Village did not experience any documented damages or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Village adhered to the COVID-19 guidelines, with individuals working from home or practicing social distancing.
January 12, 2020	High Wind	N/A	High wind	Trees and powerlines downed.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Village did not experience any documented damages or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Village did not experience any documented damages or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Village did not experience any documented damages or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Village did not experience any documented damages or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Village did not experience any documented damages or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Village did not experience any documented damages or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Village did not experience any documented damages or losses.

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Franklinville
March 6, 2022	High Wind	N/A	High wind	Trees and powerlines downed.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Village did not experience any documented damages or losses.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	Highway Department response to clear roads.

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

17.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Franklinville .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Franklinville reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Village indicated the rankings were appropriate.

Table 17-15 shows Franklinville's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 17-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Low
Flood	Medium
Landslide	High
Pandemic	Medium
Severe Storm	High
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Medium

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 17-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 17-16. Critical Facilities Flood Vulnerability

Name	Type	Vulnerability		Addressed by Proposed Action	Already Protected to 0.2% Flood Level (describe protections)
		1% Event	0.2% Event		
Franklinville 05	Bridge	X	-	2025-FranklinvilleV-11	-
National Grid- Franklinville SC	Hazardous Materials Site	X	-	2025-FranklinvilleV-01	-
Niagara Mohawk Power Corp	Electric/Power	X	-	2025-FranklinvilleV-01	-

Source: Cattaraugus County 2024

17.6.4 Identified Issues

After a review of Franklinville's hazard event history, hazard rankings, hazard location, and current capabilities, Franklinville identified the following vulnerabilities within the community:

- Critical facilities in the special flood hazard area may have an increased risk to flooding impacts. The following critical facilities in the Village are located in the special flood hazard area:
 - Niagara Mohawk Power Corp
 - National Grid-Franklinville SC
 - Village of Franklinville Wastewater Treatment Plant
- The sewer and wastewater infrastructure throughout the Village is outdated and may result in the flooding due to the inability to handle the influx of water. When water and debris overwhelm pipes, it can cause them to overflow, spilling sewage into the community and threatening the health of both humans and wildlife. Outdated infrastructure can result in utility failure or interruption if not sufficient to keep up with demand.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The Village currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.
- Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Village needs to identify locations for the placement of temporary housing.

- The Village Office and Public Works Garage do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.
- The Village does not have a Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.
- Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. Areas in the Village along Gates Creek are at a higher risk of landslide occurrence due to nearby slopes being over a 25 percent grade.
- Outdated building codes put new construction at risk during hazard events, as high winds can cause damage to structures, snow loads can impact roofs, and older construction materials may lead a structure to be more susceptible to landslide, severe storm, severe winter storm, and wildfire damages. Swift flowing waters from floods or dam and levee failures can cause structures to buckle or come off its foundation due to the immense pressure.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Franklinville 05

17.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

17.7.1 Past Mitigation Action Status

Table 17-17 indicates progress on the Village's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

17.7.2 Additional Mitigation Efforts

Franklinville did not identify any additional mitigation efforts completed since the last HMP.

Table 17-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Village of Franklinville-001	Protect the Niagara Mohawk Power Corp facility to the 0.2% annual chance flood event.	Flood	Facilities manager, FPA	Problem: A Niagara Mohawk Power Corp facility is in the special flood hazard area and vulnerable to flooding. Solution: The FPA will contact the facility manager and discuss options to protect the facility to the 0.2% annual chance flood event.	1. No Progress 2. Floodplain Administrator will contact the facility manager and discuss protection options	1. Include 2. Not applicable 3. Not applicable
2020-Village of Franklinville-002	Protect the National Grid-Franklinville SC facility to the 0.2% annual chance flood event	Flood	Facilities manager, FPA	Problem: The National Grid-Franklinville SC facility is in the special flood hazard area and vulnerable to flooding. Solution: the FPA will contact the facility manager and discuss options to protect the facility to the 0.2% annual chance flood event.	1. No Progress 2. Floodplain Administrator will contact the facility manager and discuss protection options	1. Include 2. Not applicable 3. Not applicable
2020-Village of Franklinville-003	Update storm sewer and wastewater infrastructure drainage within the village	Utility Failure	Facilities manager, Village	Problem: Outdated sewer and wastewater infrastructure throughout the village Solution: Village recently undergone both a water and wastewater assessment and are in the design phase of upgrades. Once design is complete, install new water and wastewater infrastructure within the village.	1. In Progress 2. Improvements to approximately 50% of the collection System we completed in 2023. Village DPW and Engineer are currently designing additional upgrades to the stormwater system	1. Include 2. Not applicable 3. Not applicable
2020-Village of Franklinville-004	Update Flood Damage	Flood	FPA/CEO	Problem: The Village of Franklinville needs an updated flood damage prevention ordinance	1. No Progress 2. Code Office and Village Board of Trustees are continuing to	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
	Prevention Ordinance			Solution: The Town will update a flood damage prevention ordinance	upgrade local codes and ordinances	
2020-Village of Franklinville-005	Floodplain Administrator to attend training on floodplain management	Flood	County OES/ County Codes	Problem: Floodplain Managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Solution: Obtain/host training and certification for floodplain managers	1. No Progress 2. Administrator plans to attend training in 2025	1. Include 2. Not applicable 3. Not applicable
2020-Village of Franklinville-006	Provide information to residents, business owners, and organizations about what they can do to prevent their structures from wildfires.	Wildfires	Mayor	Problem: Additional public education on wildfire risk is needed. Solution: the village will develop an outreach program to educate the public about wildfires and what they can do to protect their structures.	1. In Progress 2. Mayor is preparing information to include in the next newsletter	1. Included in 2025 HMP 2. The Village Mayor wishes to update action to include all hazards 3. Not applicable
2020-Village of Franklinville-007	Identify temporary housing location(s) for residents in the event of an emergency.	All Hazards	Village Mayor	Problem: The Village of Franklinville currently does not have a temporary housing location in the event of an emergency. Solution: The village will confirm locations and determine what needs to occur to make the sites compliant with building and fire codes.	1. No Progress 2. Village will continue to identify potential sites for temporary housing locations	1. Include 2. Not applicable 3. Not applicable
2020-Village of	Generators for the North	All Hazards	Village DPW	Problem: The North Well House, Village Office, DPW Garage, South	1. In Progress	1. Include

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
Franklinville-008	Well House, Village Office, DPW Garage, South Well House, and Wastewater treatment Plant			Well House, and Wastewater treatment Plant have insufficient backup power and require generators Solution: Purchase and install generators for North Well House, Village Office, DPW Garage, South Well House, and Wastewater treatment Plant	2. Generator for South Well House is installed and operational, generator for North Well House is ordered and scheduled to be installed in May 2025. Generators for DPW Garage and Village Office are not ordered yet	2. Remove South Well House and North Well House from action. 3. Not applicable
2020-Village of Franklinville-009	Culverts for Maple Avenue	Flood, Severe Storm	Highway Department	Problem: Culvert on Maple Avenue near Village/Town line may have been installed at an elevation that is too low. During storm events the box culvert fills with gravel. Solution: Install culvert upstream to slow water down and reduce washout which would protect the physical properties of 300 homeowners	1. Ongoing Capability 2. DPW continues to keep box culvert clean to minimize the risk of flooding	1. Discontinue 2. Not applicable 3. DPW maintenance capability
2020-Village of Franklinville-010	Update the Emergency Operations Plan	All Hazards	County, village	Problem: outdated emergency operation plan Solution: Update the village's emergency operation plan	1. No Progress 2. All associated teams will begin work on updating the EOP in calendar year 2025	1. Include 2. Not applicable 3. Not applicable
2020-Village of Franklinville-011	Update Building Codes	All Hazards	County, village	Problem: outdated building codes Solution: Update the village's building codes	1. In Progress 2. Code Office and Village Board of Trustees are continuing to upgrade local codes and ordinances	1. Include 2. Not applicable 3. Not applicable
2020-Village of Franklinville-012	Protect the Village of Franklinville Wastewater	Flood	Engineer, facility operator	Problem: The Village of Franklinville Wastewater Treatment Plant is in the special flood hazard area and vulnerable to flooding. Critical facilities	1. In Progress 2. Engineering and operations have begun gathering elevation	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
	Treatment Plant to the 0.2% annual chance flood event.			<p>must be protected to the 0.2% annual chance flood level.</p> <p>Solution: The village will work with the Town of Franklinville to conduct a feasibility assessment to determine what additional floodproofing measures are needed at the Wastewater Treatment Plant to protect it to the 0.2% annual chance level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the town will carry out the option.</p>	data and discussing potential mitigation measures	

17.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Franklinville participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Franklinville would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Village priorities.

Table 17-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 17-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 17-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X			X	X		X			X
Flood	X	X		X	X		X		X	X
Landslide	X	X		X	X		X			X
Pandemic	X			X			X			X
Severe Storm	X	X		X	X		X			X
Severe Winter Storm	X	X		X	X		X			X
Utility Failure	X	X		X			X		X	X
Wildfire	X	X		X	X		X			X

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 17-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-FranklinvilleV-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-FranklinvilleV-02	Outdated Infrastructure	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-FranklinvilleV-03	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-FranklinvilleV-04	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-FranklinvilleV-05	Comprehensive Outreach Program	1	1	1	1	1	1	0	1	1	1	1	1	0	1	12	High
2025-FranklinvilleV-06	Temporary Housing	1	0	1	1	1	1	0	1	1	1	1	1	1	0	11	High
2025-FranklinvilleV-07	Generators at Critical Facilities	1	1	1	1	1	1	0	1	1	1	1	1	1	0	12	High
2025-FranklinvilleV-08	Develop a Comprehensive Emergency Management Plan	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-FranklinvilleV-09	Landslide Mitigation	1	1	1	1	1	0	1	1	1	1	1	1	1	0	12	High
2025-FranklinvilleV-10	Review and Revise Building Codes	1	1	1	1	1	1	0	0	1	1	1	1	0	0	10	Medium
2025-FranklinvilleV-11	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-FranklinvilleV-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers								
Supporting Agencies:	Village Board								
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire								
Description of the Problem:	<p>Critical facilities in the special flood hazard area may have an increased risk to flooding impacts. The following critical facilities in the Village are located in the special flood hazard area:</p> <ul style="list-style-type: none">Niagara Mohawk Power CorpNational Grid-Franklinville SCVillage of Franklinville Wastewater Treatment Plant								
Description of the Solution:	<p>The Village will notify the critical facility owners and managers of the facility's location in the flood hazard area. The Village will encourage each facility conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. Options include:</p> <ul style="list-style-type: none">Elevation of facilityFloodproofing of facilityMobile flood barriers <p>Once the most cost-effective option is identified, the facility owner or manager will carry out the option.</p>								
Estimated Cost:	Medium								
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Village Budget								
Implementation Timeline:	Within 5 Years								
Goals Met:	1, 3, 5								
Benefits:	Ensures continuity of operations of several critical facilities in the Village.								
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.								
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.								
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.								
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.								
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.								
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)								
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)								
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low						
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facility</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area		
Action	Evaluation								
No Action	Current problem exists								
Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area								

Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events

Reduction in response times and delay of critical services in the immediate area.

DRAFT

Action 2025-FranklinvilleV-02. Outdated Infrastructure

Lead Agency:	Engineer										
Supporting Agencies:	Public Works										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The sewer and wastewater infrastructure throughout the Village is outdated and may result in the flooding due to the inability to handle the influx of water. When water and debris overwhelm pipes, it can cause them to overflow, spilling sewage into the community and threatening the health of both humans and wildlife. Outdated infrastructure can result in utility failure or interruption if not sufficient to keep up with demand.										
Description of the Solution:	Village recently undergone both a water and wastewater assessment and are in the design phase of upgrades. Improvements to approximately 50 percent of the collection system were completed in 2023. Village Public Works and Engineer are currently designing additional upgrades to the stormwater system. Once design is complete, install new water and wastewater infrastructure within the village.										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, CDBG, Village Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action will ensure sewer and wastewater facilities are improved to support the demand from the built environment and to withstand an infiltration from floodwaters.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will have access to needed utilities.										
Impact on Future Development:	Future development will be supported by improved sewer and wastewater infrastructure.										
Impact on Critical Facilities/Lifelines:	This action will support the Water System community lifeline through the assurance the infrastructure is able to support the built environment without a failure or being impacted by floodwaters.										
Impact on Capabilities:	This action will ensure current capabilities for infrastructure are maintained and/or improved.										
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk. Improvements made to the sewer and wastewater systems will reduce the likelihood of infiltration and ensure continuity of operations, preventing utility failure.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Only update water infrastructure</td><td>Water and wastewater infrastructure are both outdated and need updated</td></tr><tr><td>Increase chlorine in water to prevent bacteria growth</td><td>Not feasible, still have outdated infrastructure</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Only update water infrastructure	Water and wastewater infrastructure are both outdated and need updated	Increase chlorine in water to prevent bacteria growth	Not feasible, still have outdated infrastructure
Action	Evaluation										
No Action	Current problem exists										
Only update water infrastructure	Water and wastewater infrastructure are both outdated and need updated										
Increase chlorine in water to prevent bacteria growth	Not feasible, still have outdated infrastructure										

Action 2025-FranklinvilleV-03. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.										
Description of the Solution:	The Village will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Village will update and adopt the Flood Damage Prevention Ordinance.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.										
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.										
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.										
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.										
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Update only freeboard requirements</td> <td>Other areas of the ordinance which need to be updated would not be</td> </tr> <tr> <td>Leave NFIP</td> <td>Residents lose flood insurance coverage</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Update only freeboard requirements	Other areas of the ordinance which need to be updated would not be	Leave NFIP	Residents lose flood insurance coverage
Action	Evaluation										
No Action	Current problem exists										
Update only freeboard requirements	Other areas of the ordinance which need to be updated would not be										
Leave NFIP	Residents lose flood insurance coverage										

Action 2025-FranklinvilleV-04. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Village Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.		
Description of the Solution:	Where feasible, the Village will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Village Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-FranklinvilleV-05. Comprehensive Outreach Program

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus County										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Village currently does not have a comprehensive education and outreach program which addresses all identified hazards of concern. There is a need to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Village does not currently have hazard mitigation information and outreach on the Village website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on hazard risks and methods of mitigation measures, including those for dam and levee failure, flood, landslide, pandemic, severe storm, severe winter storm, utility failure, and wildfire. Methods of distribution may include Village events, the Village newsletters, social media, the Village website, and having the materials on display for the public at Village libraries and offices. Outreach materials will be specified with education and information for each individual hazard of concern.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the current public education and outreach program in the Village by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Village.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the various hazards which may impact them in the Village.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of potential hazards. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's already existing public education and outreach program and adapt it to the Village's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from hazards and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Village</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation

Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Village										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-FranklinvilleV-06. Temporary Housing

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus County Office of Emergency Services, Neighboring Jurisdictions, American Red Cross										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Following emergency events, individuals may be unable to stay in their places of residence due to storm damages. Flooding from dam and levee failures can cause residences to become uninhabitable; wildfires and landslides can compromise the integrity of the structure; and severe storms and severe winter storms can lead to utility failures. The Village needs to identify locations for the placement of temporary housing.										
Description of the Solution:	The Village Board will lead efforts to identify a suitable location to temporarily relocate residents or visitors in need of temporary housing. The Village will consider options to partner with neighboring jurisdictions for a regional location. The Village will contact the Cattaraugus County Office of Emergency Services for assistance as needed to identify a suitable, approved location.										
Estimated Cost:	Medium										
Potential Funding Sources:	Village Budget, County Budget, Neighboring Jurisdictions, American Red Cross, HSGP										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 2, 4, 6										
Benefits:	Providing a safe, climate-controlled location for individuals in need following an emergency can provide a sense of gratitude and normalcy to an otherwise negative event. Removing individuals from at-risk locations and offering a temporary locations for impacted persons to gather, increases the safety of the overall community.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations are often the most risk during emergencies and disaster events. Offering a safe location for these populations can ensure their health is looked after and they are removed from harm's way.										
Impact on Future Development:	The temporary housing facility will be able to support population increases brought in from potential future development.										
Impact on Critical Facilities/Lifelines:	This action would create, or expand on already existing, critical facilities, as temporary housing locations are critical facilities.										
Impact on Capabilities:	This action will create a new capability of the Village by offering a resource for its visitors and residents to utilize should they be in need of temporary housing.										
Climate Change Considerations:	The changing climate may lead to the Village, its residents, and visitors being exposed to hazards more frequently. Extreme temperatures have occurred more often in recent years which lead to drought; heavier rainfalls during severe storms have increased the occurrence of flooding. A temporary housing facility can provide a safe location for impacted individuals.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Utilize County facilities</td><td>May require signed agreements; reliant on County opening facilities</td></tr><tr><td>Utilize American Red Cross facilities</td><td>Reliant on American Red Cross opening a facility</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Utilize County facilities	May require signed agreements; reliant on County opening facilities	Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility

No Action	Current problem exists										
Utilize County facilities	May require signed agreements; reliant on County opening facilities										
Utilize American Red Cross facilities	Reliant on American Red Cross opening a facility										

Action 2025-FranklinvilleV-07. Generators at Critical Facilities

Lead Agency:	Engineering										
Supporting Agencies:	Village Board, Public Works										
Hazards of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire									
Description of the Problem:	The Village Office and Public Works Garage do not have back up power, which could impact the continuity of operations at the facilities in the event of a utility or power failure. High winds associated with severe storms and severe winter storms are known to cause utility failures, which would impact the continuity of operations at both critical facilities. Rising water levels from floods could impact these facilities; back-up generators would permit any influx of water to be removed from the facilities via pumping systems.										
Description of the Solution:	The Village Engineer will conduct a study to determine the required generator capacity to support the critical facilities. The Village will then purchase and install the generator and all necessary electrical hookup components. The installation of the back-up emergency generators will ensure continuity of operations for this critical facility and its operations during each identified hazard of concern. With expectations to provide essential services during times of emergency and otherwise, having a back-up power source is crucial. Long-term risks are mitigated through an emergency generator by reducing the likelihood of impacts from power outages, allowing essential services to continue.										
Estimated Cost:	High										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Village Budget										
Implementation Timeline:	Within 5 years										
Goals Met:	1, 4, 5										
Benefits:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders, utility workers, and emergency managers to stage and deploy resources to vulnerable and hazard prone areas.										
Impact on Future Development:	This action results in protection of a critical facility that could support future development.										
Impact on Critical Facilities/Lifelines:	This action protects public health and safety and ensures continued operation of a critical facility and its essential functions during a power outage.										
Impact on Capabilities:	This action ensures continuity of operations to maintain capabilities.										
Climate Change Considerations:	Climate change is likely to increase severe weather events such as flooding, wind, and extreme temperatures that result in power failures. This action accounts for a likely increase in power failure events.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>-</td></tr><tr><td>Microgrid</td><td>Costly and difficult to implement.</td></tr><tr><td>Solar panels and battery backup</td><td>Solar power is unlikely to be able to provide battery power for extended power failure events.</td></tr></tbody></table>	Action	Evaluation	No Action	-	Microgrid	Costly and difficult to implement.	Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.		
Action	Evaluation										
No Action	-										
Microgrid	Costly and difficult to implement.										
Solar panels and battery backup	Solar power is unlikely to be able to provide battery power for extended power failure events.										

Action 2025-FranklinvilleV-08. Develop a Comprehensive Emergency Management Plan

Lead Agency:	Village Board										
Supporting Agencies:	Cattaraugus Office of Emergency Services										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Village does not have a Comprehensive Emergency Management Plan (CEMP). Hazard mitigation principles need to be integrated into the CEMP. A CEMP establishes the overall authority, roles, and functions performed during incidents. Incorporating hazard mitigation principles into a CEMP ensures hazard risk is identified.										
Description of the Solution:	The Village Board will lead the development of the Comprehensive Emergency Management Plan (CEMP), with support from the Cattaraugus Office of Emergency Services. The CEMP will integrate hazard mitigation principles into its contents, including addresses capabilities related to reduce the risk to the identified hazards of concern identified with this Hazard Mitigation Plan. The Village will send the CEMP to the County for review, followed by a State review.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget, EMPG										
Implementation Timeline:	3 years										
Goals Met:	1, 2, 4, 5										
Benefits:	The CEMP details what the Village will do during a disaster (incident command implementation, command center location and activities, specific plans by department, etc.). The creation of a CEMP will permit the Village to integrate new plans, policies, capabilities, and hazard assessments.										
Impact on Socially Vulnerable Populations:	The section overview portion of the CEMP covers a discussion of a variety of topics, including population distribution and locations, including any concentrated populations of individuals with disabilities, others with access and functional needs, or individuals with limited English proficiency.										
Impact on Future Development:	Future development will be protected by the actions which the Village performs following the CEMP.										
Impact on Critical Facilities/Lifelines:	The section overview portion of the CEMP covers a discussion of a variety of topics, including vulnerable critical facilities (e.g. nursing homes, schools, hospitals, infrastructure).										
Impact on Capabilities:	This action will create a new planning and response capability for the Village.										
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events. As impacts from climate change are increasingly felt, the contents in an CEMP, including in the basic plan and any annexes, may need to be updated.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input checked="" type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Integrate hazard mitigation principles in only hazard appendices</td> <td>The plan will miss integration opportunities in the basic plan and annexes</td> </tr> <tr> <td>Ask County to integrate hazard mitigation into the County CEMP</td> <td>Village CEMP will remain undeveloped</td> </tr> </tbody> </table>	Action	Evaluation	No Action	Current problem exists	Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes	Ask County to integrate hazard mitigation into the County CEMP	Village CEMP will remain undeveloped		
Action	Evaluation										
No Action	Current problem exists										
Integrate hazard mitigation principles in only hazard appendices	The plan will miss integration opportunities in the basic plan and annexes										
Ask County to integrate hazard mitigation into the County CEMP	Village CEMP will remain undeveloped										

Action 2025-FranklinvilleV-09. Landslide Mitigation

Lead Agency:	Engineering										
Supporting Agencies:	Highway Department										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Landslide events are often driven by hazards such as heavy rain events, flooding, heavy snowmelt, and wildfires. Landslides can destroy the natural and built environments, causing detriment to the structures in its path. Landslides may be able to be mitigated by cutting banks to prevent erosion. Areas in the Village along Gates Creek are at a higher risk of landslide occurrence due to nearby slopes being over a 25 percent grade.										
Description of the Solution:	<p>The Village Engineer will complete an assessment to identify an appropriate, cost-effective method to mitigation landslide risk. Possible mitigation measures include:</p> <ul style="list-style-type: none">• Construction of retaining walls, soil nailing, ground anchor walls• Install horizontal drains to reduce soil saturation• Cut banks along water ways to prevent oversaturated soils from falling• Install netting										
Estimated Cost:	TBD after mitigation technique is chosen										
Potential Funding Sources:	FEMA HMA, Village Budget, CHIPS										
Implementation Timeline:	Within 5 years										
Goals Met:	1										
Benefits:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Socially Vulnerable Populations:	This action will assist socially vulnerable populations whose properties are impacted by landslides. Keeping the roadway open to traffic also permits vulnerable populations to travel to critical appointments.										
Impact on Future Development:	Future development in the impacted area will be less likely to be impacted by landslides.										
Impact on Critical Facilities/Lifelines:	This action will identify measures to protect infrastructure in the transportation lifeline, which will lead to the assurance of clear roadways for evacuations, regular travel, and emergency responses.										
Impact on Capabilities:	This action improves the Village's reliability in terms of transportation.										
Climate Change Considerations:	A warmer atmosphere means storms have the potential to be more intense and occur more often, including increased periods of intense rain events. Saturated soils can lead to an increased possibility of landslide occurrences. Conversely, drier summer conditions may fuel wildfires, leading to unstable soils and resulting in landslide occurrences.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Reconstruct roadway outside of hazard area</td><td>Not feasible</td></tr><tr><td>Close road and reroute traffic around hazard area</td><td>Not feasible, would cause confusion amongst travelers</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Reconstruct roadway outside of hazard area	Not feasible	Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers		
Action	Evaluation										
No Action	Current problem exists										
Reconstruct roadway outside of hazard area	Not feasible										
Close road and reroute traffic around hazard area	Not feasible, would cause confusion amongst travelers										

Action 2025-FranklinvilleV-10. Review and Revise Building Codes

Lead Agency:	Code Enforcement										
Supporting Agencies:	Village Board										
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input checked="" type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	Outdated building codes put new construction at risk during hazard events, as high winds can cause damage to structures, snow loads can impact roofs, and older construction materials may lead a structure to be more susceptible to landslide, severe storm, severe winter storm, and wildfire damages. Swift flowing waters from floods or dam and levee failures can cause structures to buckle or come off its foundation due to the immense pressure.										
Description of the Solution:	The Village will review and revise building codes to integrate hazard mitigation principles to create a more resilient community. The Village will also use available tools and resources from FEMA and other sources to integrate climate adaptation planning such as FEMA's "Climate Adaptation Planning: Guidance for Emergency Managers" document. Updated building codes will meet the minimum requirements set by the State.										
Estimated Cost:	Low										
Potential Funding Sources:	Village Budget										
Implementation Timeline:	4 years										
Goals Met:	1, 4										
Benefits:	Mitigation considerations being taken when developing or updating building and zoning codes can lessen the risk of damage from a hazard event and increase overall community resiliency.										
Impact on Socially Vulnerable Populations:	Communities that collaborate and coordinate their regulatory efforts are more likely to have identified ways to best work with vulnerable populations to increase their level of preparedness.										
Impact on Future Development:	Updated building and zoning codes ensure that any new development that does take place is built to the safest standards based upon the best available data.										
Impact on Critical Facilities/Lifelines:	Integrating mitigation into building and zoning protects existing infrastructure and guides the safe development of new construction.										
Impact on Capabilities:	A consolidated review process brings together the capabilities of agencies and departments and better identifies what resources are available at any given point in time and where they are needed most.										
Climate Change Considerations:	As the climate changes, regulatory processes will require a more intense focus on maintenance and gathering of the best data to remain current and accurate over time. The Village will use available tools and resources from FEMA and other sources to integrate climate adaptation planning such as FEMA's "Climate Adaptation Planning: Guidance for Emergency Managers" document.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input type="checkbox"/> High	<input checked="" type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Do not reach minimum State standards</td><td>Will be below standards</td></tr><tr><td>Adopt building code without integrating hazard mitigation principles</td><td>Will not increase Village's resiliency</td></tr></tbody></table>	Action	Evaluation	No Action	Current problem exists	Do not reach minimum State standards	Will be below standards	Adopt building code without integrating hazard mitigation principles	Will not increase Village's resiliency		
Action	Evaluation										
No Action	Current problem exists										
Do not reach minimum State standards	Will be below standards										
Adopt building code without integrating hazard mitigation principles	Will not increase Village's resiliency										

Action 2025-FranklinvilleV-11. Bridge Evaluations

Lead Agency:	Highway Department		
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary: <ul style="list-style-type: none"> Franklinville 05 		
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.		
Estimated Cost:	Medium		
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY		
Implementation Timeline:	Within 5 years		
Goals Met:	1		
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.		
Impact on Socially Vulnerable Populations:	Not applicable		
Impact on Future Development:	Not applicable		
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.		
Impact on Capabilities:	Not applicable		
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low		
Alternatives:	Action	Evaluation	
	No Action	Current problem exists	
	Remove bridges	May cause significant traffic problems	
	Replace bridges	Cost prohibitive	

18. TOWN OF FREEDOM

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Town of Freedom with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Freedom, describes who participated in the planning process, assesses Freedom's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

18.1 HAZARD MITIGATION PLANNING TEAM

The Town of Freedom identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Town departments. The Highway Superintendent represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 18-1 summarizes Town officials who participated in the development of the annex and in what capacity. Additional documentation of the Town's planning activities through Steering Committee meetings is included in Volume I.

Table 18-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: James Haggerty, Highway Superintendent Address: 1188 Eagle Street, P.O. Box 89, Sandusky, NY 14133 Phone Number: (716) 258-8187 Email: jhaghwsuper@gmail.com	Name/Title: Mindy Holland, Town Clerk Address: 1188 Eagle Street, P.O. Box 89, Sandusky, NY 14133 Phone Number: (716) 492-0961 ext. 1 Email: Clerk@freedomny.org
National Flood Insurance Program Floodplain Administrator	
Name/Title: Pat Cummings, Code Enforcement Address: 1188 Eagle Street, P.O. Box 89, Sandusky, NY 14133 Phone Number: (716) 353-1834 Email: ce@freedomny.org	

18.2 COMMUNITY PROFILE

The Town of Freedom is located in the northeast corner of Cattaraugus County in western New York State. The Town of Freedom has a total area of 40.67 square miles. The town is bordered to the north by Arcade in Wyoming. To the east of the town is the Town of Centerville in Allegany County, west are the towns of Yorkshire and Machias and the Town of Farmersville is to the south.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 5.3 percent of the

population is 5 years of age or younger, 17.4 percent is 65 years of age or older, 0 percent is non-English speaking, 10.7 percent is below the poverty threshold, and 13.3 percent is considered disabled.

18.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Freedom performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Freedom to identify opportunities for integrating mitigation concepts into ongoing Town procedures.

18.3.1 Planning and Regulatory Capability and Integration

Table 18-2 summarizes the planning and regulatory tools that are available to Freedom.

Table 18-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Local Law 2, 2022: Uniform Fire Prevention and Building Code	State, Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk?				
This local law provides for the administration and enforcement of the New York State Uniform Fire Prevention and Building Code (the Uniform Code) and the State Energy Conservation Construction Code (the Energy Code) in this Town. This local law is adopted pursuant to section 10 of the Municipal Home Rule Law. Except as otherwise provided in the Uniform Code, the Energy Code other state law, or other section of this local law, all buildings, structures, and premises, regardless of use or occupancy, are subject to the provisions this local law.				
Zoning/Land Use Code	Yes	Land Use Ordinance of 1975	Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Provides minimum requirements for the construction of structures in the Town, including construction in designated Flood Hazard Areas and Floodways, and for the issuance of building permits, special use permits and variances.				
Subdivision Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Site Plan Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to "caveat emptor," a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.				
Growth Management	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Environmental Protection Ordinance(s)	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Flood Damage Prevention Ordinance	Yes	Local Law #3, 1991 – Flood Damage Prevention	Federal, State, County and Local	Code Enforcement Officer
How has or will this be integrated with the HMP and how does this reduce risk? It is the purpose of this local law to promote the public health, safety, and general welfare, to reduce degradation of the environment, and to minimize public and private losses due to flood conditions in specific areas by provisions designed to: <ol style="list-style-type: none">1. regulate uses which are dangerous to health, safety and property due to water or erosion hazards, or which result in damaging increases in erosion or in flood heights or velocities;2. require that uses vulnerable to floods, including facilities which serve such uses, be protected against flood damage at the time of initial construction;3. control the alteration of natural floodplains, stream channels, and natural protective barriers which are involved in the accommodation of flood waters;4. control filling, grading, dredging, and other development which may increase erosion or flood damages;5. regulate the construction of flood barriers which will unnaturally divert flood waters, or which may increase flood hazards to other lands; and6. qualify and maintain participation in the National Flood Insurance program				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Wellhead Protection	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Emergency Management Ordinance	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Climate Change Ordinance	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Other	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
PLANNING DOCUMENTS				
General/Comprehensive Plan	Yes	Town of Freedom Comprehensive Plan, 2024	Local	Town Board
How has or will this be integrated with the HMP and how does this reduce risk?				
The goals herein reflect the hopes, desires, needs, and wants of the Town's residents. These will broadly shape and give guidance to the Town's future policy making decisions.				
<ol style="list-style-type: none">1. Retain the rural, pastoral, and agricultural character of the Town while providing and supporting opportunities for measured development in well suited areas.2. Provide a quality living environment and encourage the sustainability and availability of a variety of housing types including single family homes, multi-unit housing, vacation, and seasonal homes, and preexisting and potential future building sites.3. To encourage and promote business, commercial, and industrial ventures using sound planning and smart growth principles to enhance, promote and protect the economic stability of the town4. Protect, maintain, and enhance the pastoral character of the Town through careful planning.5. To provide for adequate and increased public assembly areas and continued maintenance of all town property.				
Capital Improvement Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Disaster Debris Management Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Floodplain Management or Watershed Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Stormwater Management Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Open Space Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Urban Water Management Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Habitat Conservation Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Economic Development Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Community Wildfire Protection Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Community Forest Management Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Transportation Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Agriculture Plan	Yes	Agricultural and Farmland Protection Plan	County	EDPT
How has or will this be integrated with the HMP and how does this reduce risk? The plan includes recommendations to address critical structural and industry-wide concerns that impact the long-term viability of agriculture in Cattaraugus County; for improving conditions specific to health and well-being of local agricultural enterprises through training, business planning, network development, mentoring, finance, research and development support, and similar services; and to offer programs and processes that address the land use issues facing both towns and farmers.				
Climate Action/Resilience/Sustainability Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Tourism Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Business/ Downtown Development Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Other	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
RESPONSE/RECOVERY PLANNING				
Comprehensive Emergency Management Plan	Yes	Comprehensive Emergency Management Plan (CEMP)	County	OES
How has or will this be integrated with the HMP and how does this reduce risk? The CEMP defines the scope of preparedness and emergency management activities necessary in the County. This document assigns responsibility to organizations and individuals for carrying out specific actions that exceed routine responsibility at projected times and places during an emergency; sets lines of authority and organizational relationships and shows how all actions will be coordinated; identifies how people and property are protected; and identifies personnel, equipment, facilities, supplies, and other resources available within the jurisdiction or by agreement with other jurisdictions.				
Continuity of Operations Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Substantial Damage Response Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Threat and Hazard Identification and Risk Assessment	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery Plan	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Public Health Plan	Yes	Health Department Strategic Plan 2022–2025	County	Health Department
How has or will this be integrated with the HMP and how does this reduce risk? The Cattaraugus County Health Department's (CCHD) Strategic Planning Process began in April 2022 using the resources of the New York State Department of Health NYS Public Health Corp Fellows. As a part of this process, the fellows reviewed the 2018–2021 strategic plan for past successes and failures and discussed what was needed for future success. Both an external assessment, in which county demographic data, economic factors, health outcomes, and community health assessment findings that have the potential to affect the agency and strategies were examined, and an internal assessment of a Strengths, Weaknesses, Opportunities, and Threats (SWOT) analysis was completed.				
Other: Community Needs Assessment and Community Health Improvement Plan	Yes	Community Needs Assessment and Community Health Improvement Plan	County	Health Department
How has or will this be integrated with the HMP and how does this reduce risk? The 2022–2024 OGH/BRMC Community Service Plan (CSP) and the CCHD's Community Health Assessment and Community Health Improvement Plan (CHA-CHIP) were conducted to identify significant health needs as outlined by the New York State Department of Health's 2022–2024 Prevention Agenda, where applicable. It also provides critical information OGH/BRMC, the CCHD, and others in a position to make a positive impact on the health of the region's residents. The CSP/CHA-CHIP enables the health department, hospital, and other community partners to strategically establish priorities, develop interventions, and direct resources to improve the health of residents living in the service area. The CSP/CHA-CHIP includes a detailed examination of priority areas identified in the NYS Prevention Agenda: (1) prevent chronic diseases; (2) promote a healthy and safe environment; (3) promote healthy women, infants and children; (4) promote well-being and prevent mental health and substance use disorders; and (5) prevent communicable diseases. The Prevention Agenda is a six-year effort to make New York the healthiest state. Developed in collaboration				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
--	---------------------------------	--	---	--

with 140 organizations, the plan identifies New York's most urgent health concerns, and suggests ways local health departments, hospitals, and partners from health, business, education, and community organizations can work together to solve them.

18.3.2 Development and Permitting Capability

Table 18-3 summarizes the capabilities of Freedom to oversee and track development.

Table 18-3. Development and Permitting Capability

	Yes/No	Comment
Do you issue development permits?	Yes	Code Enforcement
<ul style="list-style-type: none"> If you issue development permits, what department is responsible? If you do not issue development permits, what is your process for tracking new development? 		
Are permits tracked by hazard area? (For example, floodplain development permits.)	Yes	Floodplain
Do you have a buildable land inventory?	No	-
<ul style="list-style-type: none"> If you have a buildable land inventory, please describe 		
Describe the level of buildout in your jurisdiction.	N/A	20%

18.3.3 Administrative and Technical Capability

Table 18-4 summarizes potential staff and personnel resources available to Freedom and their current responsibilities that contribute to hazard mitigation.

Table 18-4. Administrative and Technical Capabilities

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
ADMINISTRATIVE CAPABILITY		
Planning Board	No	-
Zoning Board of Adjustment	No	-
Planning Department	No	-
Mitigation Planning Committee	No	-
Environmental Board/Commission	No	-
Open Space Board/Committee	No	-
Economic Development Commission/Committee	No	-
Public Works/Highway Department	Yes	Highway Department

Resources	Available? (Yes/No)	Comment (available staff, responsibilities, support of hazard mitigation)
Construction/Building/Code Enforcement Department	Yes	Code Enforcement
Emergency Management/Public Safety Department	No	-
Maintenance programs to reduce risk (stormwater maintenance, tree trimming, etc.)	No	-
Mutual aid agreements	No	-
Human Resources Manual - Do any job descriptions specifically include identifying or implementing mitigation projects or other efforts to reduce natural hazard risk?	No	-
Other	No	-
TECHNICAL/STAFFING CAPABILITY		
Planners or engineers with knowledge of land development and land management practices	No	-
Engineers or professionals trained in building or infrastructure construction practices	No	-
Planners or engineers with an understanding of natural hazards	No	-
Staff with expertise or training in benefit/cost analysis	No	-
Professionals trained in conducting damage assessments	No	-
Personnel skilled or trained in GIS and/or Hazus applications	No	-
Staff that work with socially vulnerable populations or underserved communities	No	-
Environmental scientists familiar with natural hazards	No	-
Surveyors	No	-
Emergency manager	No	-
Grant writers	No	-
Resilience Officer	No	-
Other (this could include stormwater engineer, environmental specialist, etc.)	No	-

18.3.4 Fiscal Capability

Table 18-5 summarizes financial resources available to Freedom.

Table 18-5. Fiscal Capabilities

Financial Resources	Accessible or Eligible to Use? (Yes/No)
Community Development Block Grants (CDBG, CDBG-DR)	No
Capital improvement project funding	No
Authority to levy taxes for specific purposes	No
User fees for water, sewer, gas, or electric service	No
Impact fees for homebuyers or developers of new development/homes	No
Stormwater utility fee	No
Incur debt through general obligation bonds	No
Incur debt through special tax bonds	No
Incur debt through private activity bonds	No
Withhold public expenditures in hazard-prone areas	No
Other federal or state funding programs	No
Open Space Acquisition funding programs	No
Other (for example, Clean Water Act 319 Grants [Nonpoint Source Pollution])	No

18.3.5 Education and Outreach Capability

Table 18-6 summarizes the education and outreach resources available to Freedom.

Table 18-6. Education and Outreach Capabilities

Outreach Resources	Available? (Yes/No)	Comment
Public information officer or communications office	No	-
Personnel skilled or trained in website development	No	-
Hazard mitigation information available on your website	No	-
Social media for hazard mitigation education and outreach	No	-
Citizen boards or commissions that address issues related to hazard mitigation	No	-
Warning systems for hazard events	No	-
Natural disaster/safety programs in place for schools	No	-
Organizations that conduct outreach to socially vulnerable populations and underserved populations	No	-
Public outreach mechanisms / programs to inform citizens on natural hazards, risk, and ways to protect themselves during such events	No	-

18.3.6 Community Classifications

Table 18-7 summarizes classifications for community programs available to Freedom.

Table 18-7. Community Classifications

Program	Participating? (Yes/No)	Classification	Date Classified
Community Rating System (CRS)	No	-	-
Building Code Effectiveness Grading Schedule (BCEGS)	No	-	-
Public Protection (ISO Fire Protection Classes 1 to 10)	No	-	-
National Weather Service StormReady Certification	No	-	-
Firewise Communities classification	No	-	-
New York State Climate Smart Communities	No	-	-
Other: Organizations with mitigation focus (advocacy group, non-government)	No	-	-

N/A = Not applicable

— = Unavailable

18.3.7 Adaptive Capacity

Adaptive capacity is defined as “the ability of systems, institutions, humans and other organisms to adjust to potential damage, to take advantage of opportunities, or respond to consequences” (IPCC 2022). Each jurisdiction has a unique combination of capabilities to adjust to, protect from, and withstand a future hazard event, future conditions, and changing risk. Table 18-8 summarizes the adaptive capacity for each identified hazard of concern and the Town’s capability to address related actions using the following classifications:

- Strong: Capacity exists and is in use.
- Moderate: Capacity might exist; but is not used or could use some improvement.
- Weak: Capacity does not exist or could use substantial improvement

Table 18-8. Adaptive Capacity

Hazard	Adaptive Capacity - Strong/Moderate/Weak
Dam and Levee Failure	Moderate
Flood	Moderate
Landslide	Moderate
Pandemic	Moderate
Severe Storm	Moderate
Severe Winter Storm	Moderate
Utility Failure	Moderate
Wildfire	Moderate

18.4 NATIONAL FLOOD INSURANCE PROGRAM COMPLIANCE

This section provides specific information on the management and regulation of the regulatory floodplain, including current and future compliance with the National Flood Insurance Program (NFIP). The floodplain administrator listed in Table 18-1 is responsible for maintaining this information.

18.4.1 NFIP Statistics

Table 18-9 summarizes the NFIP policy and claim statistics for Freedom.

Table 18-9. Freedom NFIP Summary of Policy and Claim Statistics

# Policies	6
# Claims (Losses)	4
Total Loss Payments	\$81,006.26
# Repetitive Loss Properties (NFIP definition)	0
# Repetitive Loss Properties (FMA definition)	0
# Severe Repetitive Loss Properties	0

NFIP Definition of Repetitive Loss: The NFIP defines a repetitive loss property as any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period since 1978.

FMA Definition of Repetitive Loss: FEMA's Flood Mitigation Assistance (FMA) program defines a repetitive loss property as any insurable building that has incurred flood-related damage on two occasions, in which the cost of the repair, on average, equaled or exceeded 25 percent of the market value of the structure at the time of each such flood event.

Definition of Severe Repetitive Loss: A residential property covered under an NFIP flood insurance policy and: (a) That has at least four NFIP claim payments over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or (b) For which at least two separate claims payments have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building. At least two of the claims must have occurred within any 10-year period, more than 10 days apart.

Source: FEMA 2024

18.4.2 Flood Vulnerability Summary

Table 18-10 provides a summary of the NFIP program in Freedom.

Table 18-10. NFIP Summary

NFIP Topic	Comments
Flood Vulnerability Summary	
Describe areas prone to flooding in your jurisdiction.	Clear Creek
Do you maintain a list of properties that have been damaged by flooding?	No records available
Do you maintain a list of property owners interested in flood mitigation?	Yes, currently no owners are interested.
How many homeowners and/or business owners are interested in mitigation (elevation or acquisition)?	None at this time
Are any RiskMAP projects currently underway in your jurisdiction? If so, state what projects are underway.	No
How do you make Substantial Damage determinations?	Code Enforcement would contact a structural engineer
How many Substantial Damage determinations were declared for recent flood events in your jurisdiction?	Zero
How many properties have been mitigated (elevation or acquisition) in your jurisdiction?	Zero

NFIP Topic	Comments
If there are mitigation properties, how were the projects funded?	
Do your flood hazard maps adequately address the flood risk within your jurisdiction? If not, state why.	Will adequately address after FEMA approves an updated version
NFIP Compliance	
What local department is responsible for floodplain management?	Code Enforcement
Are any certified floodplain managers on staff in your jurisdiction?	No
Do you have access to resources to determine possible future flooding conditions from climate change?	Yes, County GIS
Does your floodplain management staff need any assistance or training to support its floodplain management program? If so, what type of assistance/training is needed?	More localized (or on site) training to Cattaraugus County so training is more feasible to do with limited staffing.
Provide an explanation of NFIP administration services you provide (e.g., permit review, GIS, education/outreach, inspections, engineering capability)	Permit Review
How do you determine if proposed development on an existing structure would qualify as a substantial improvement?	Code Enforcement
What are the barriers to running an effective NFIP program in the community, if any?	Limited staffing and financial resources
Does your jurisdiction have any outstanding NFIP compliance violations that need to be addressed? If so, state the violations.	No
When was the most recent Community Assistance Visit (CAV) or Community Assistance Contact (CAC)?	CAC: Not applicable CAV: September 3, 2010
What is the local law number or municipal code of your flood damage prevention ordinance?	Local Law #3, 1991 – Flood Damage Prevention
What is the date that your flood damage prevention ordinance was last amended?	October 25, 1991
Does your floodplain management program meet or exceed minimum requirements? If exceeds, in what ways?	Meets minimum requirements
Are there other local ordinances, plans or programs (e.g., site plan review) that support floodplain management and meeting the NFIP requirements? For instance, does the planning board or zoning board consider efforts to reduce flood risk when reviewing variances such as height restrictions?	Planning Board ensures a SEQUER compliance in regards to new constructions and variances
Does your community plan to join the CRS program or is your community interested in improving your CRS classification?	No

18.5 GROWTH/DEVELOPMENT TRENDS

Understanding how past, current, and projected development patterns have or are likely to increase or decrease risk in hazard areas is a key component to appreciating a jurisdiction's overall risk to its hazards of concern. Recent and expected future development trends, including major residential/commercial development and major infrastructure development, are summarized in Table 18-11 through Table 18-13.

Table 18-11. Number of Building Permits for New Construction Issued Since the Previous HMP

	New Construction Permits Issued			
	Single Family	Multi-Family	Other (commercial, mixed-use, etc.)	Total
2019				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0
2020				
Total Permits	2	0	0	2
Permits within SFHA	0	0	0	0
2021				
Total Permits	1	0	0	1
Permits within SFHA	0	0	0	0
2022				
Total Permits	4	0	0	4
Permits within SFHA	0	0	0	0
2023				
Total Permits	3	1	0	4
Permits within SFHA	0	0	0	0
2024				
Total Permits	0	0	0	0
Permits within SFHA	0	0	0	0

SFHA = Special Flood Hazard Area (1% flood event)

Table 18-12. Recent Major Development and Infrastructure from 2019 to Present

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
Invenergy	Commercial	1	407 Zimmer Road	None	Office & Storage
Edelweiss Farms	Agriculture	4	10826 Osmun Road	None	Farming
Invenergy Windmills	Commercial	27	Location in Freedom	None	Wind Energy

* Only location-specific hazard zones or vulnerabilities identified.

Table 18-13. Known or Anticipated Major Development and Infrastructure in the Next Five Years

Property or Development Name	Type of Development	# of Units / Structures	Location (address and/or block and lot)	Known Hazard Zones*	Description / Status of Development
Schwab Transport	Commercial	1	10064 Pigeon Hill Road	None	Office/workshop

18.6 JURISDICTIONAL RISK ASSESSMENT

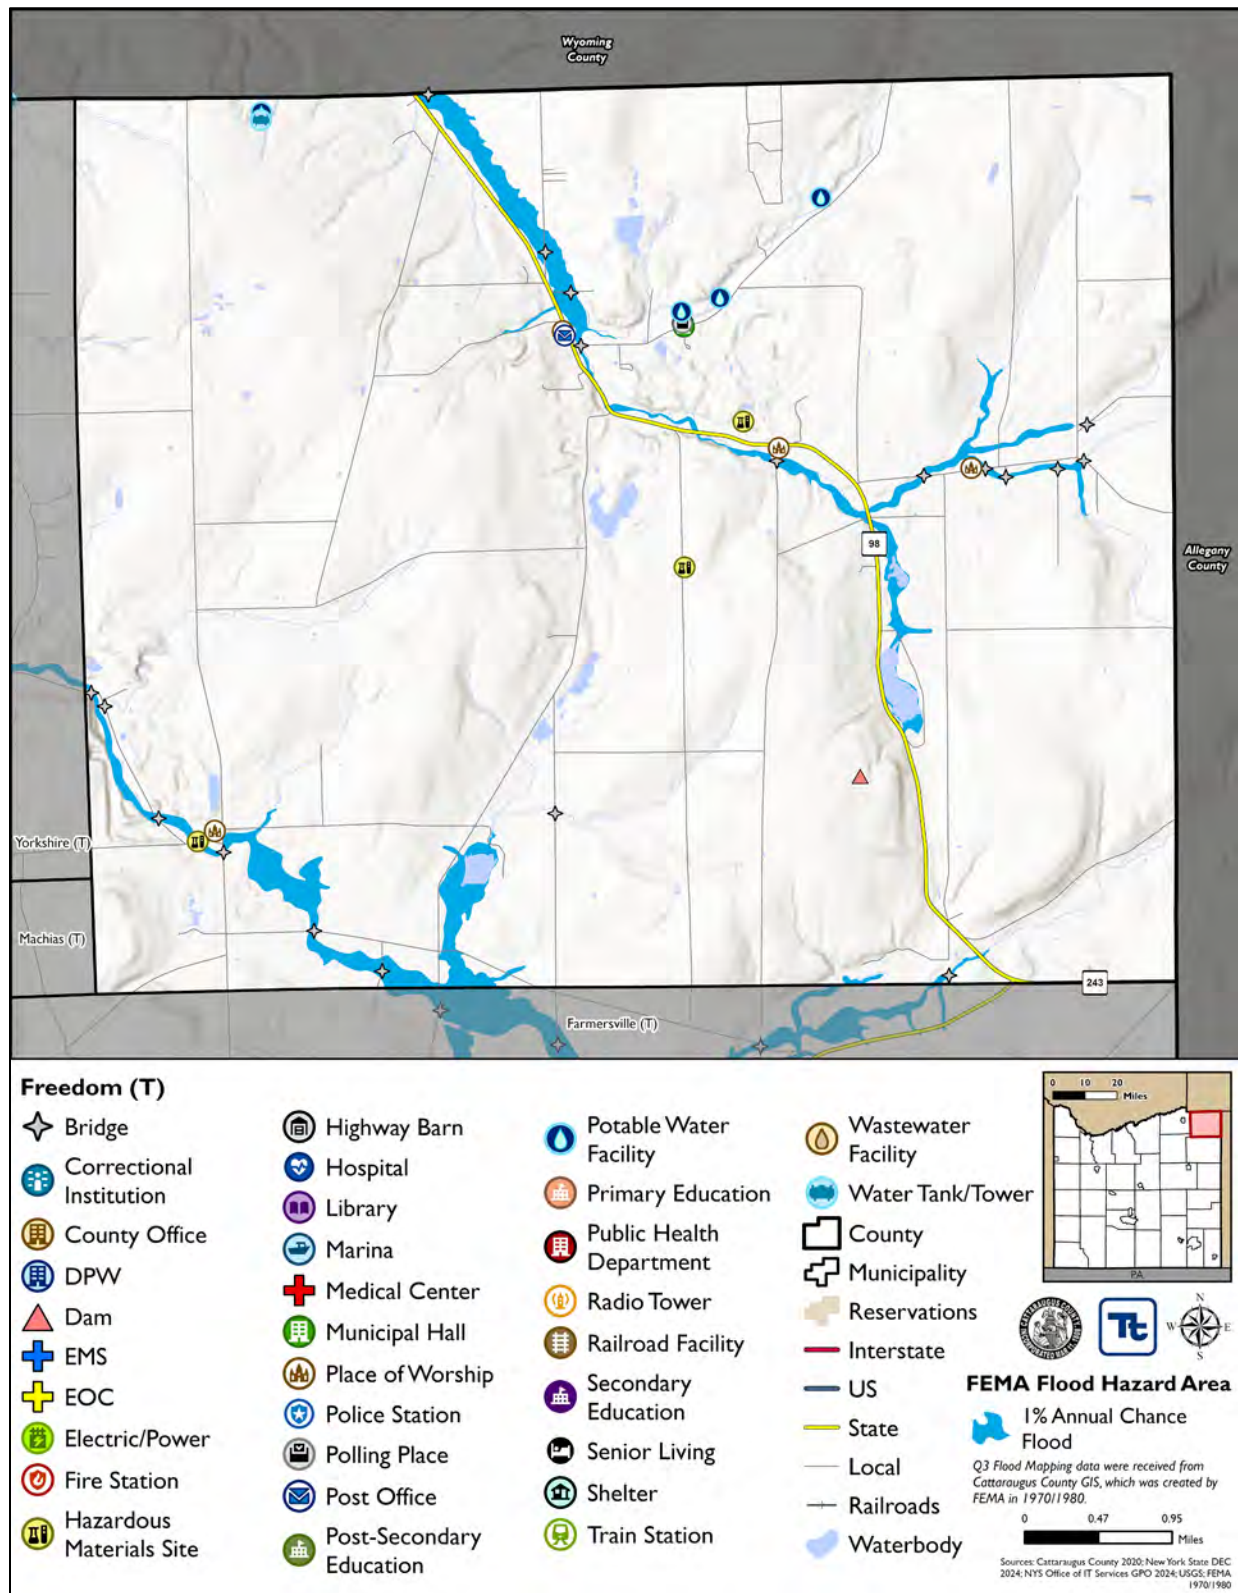

The hazard profiles in Volume I provide detailed information regarding each planning partner's vulnerability to the identified hazards, including summaries of Freedom's risk assessment results and data used to determine the hazard ranking. Key local risk assessment information is presented below.

18.6.1 Hazard Area

Hazard area maps provided below illustrate the probable hazard areas impacted within the Town are shown in Figure 18-1 through Figure 18-2. These maps are based on the best available data at the time of the preparation of this plan and are adequate for planning purposes. Maps are provided only for hazards that can be identified clearly using mapping techniques and technologies and for which Freedom has significant exposure. The maps show the location of potential new development, where available.

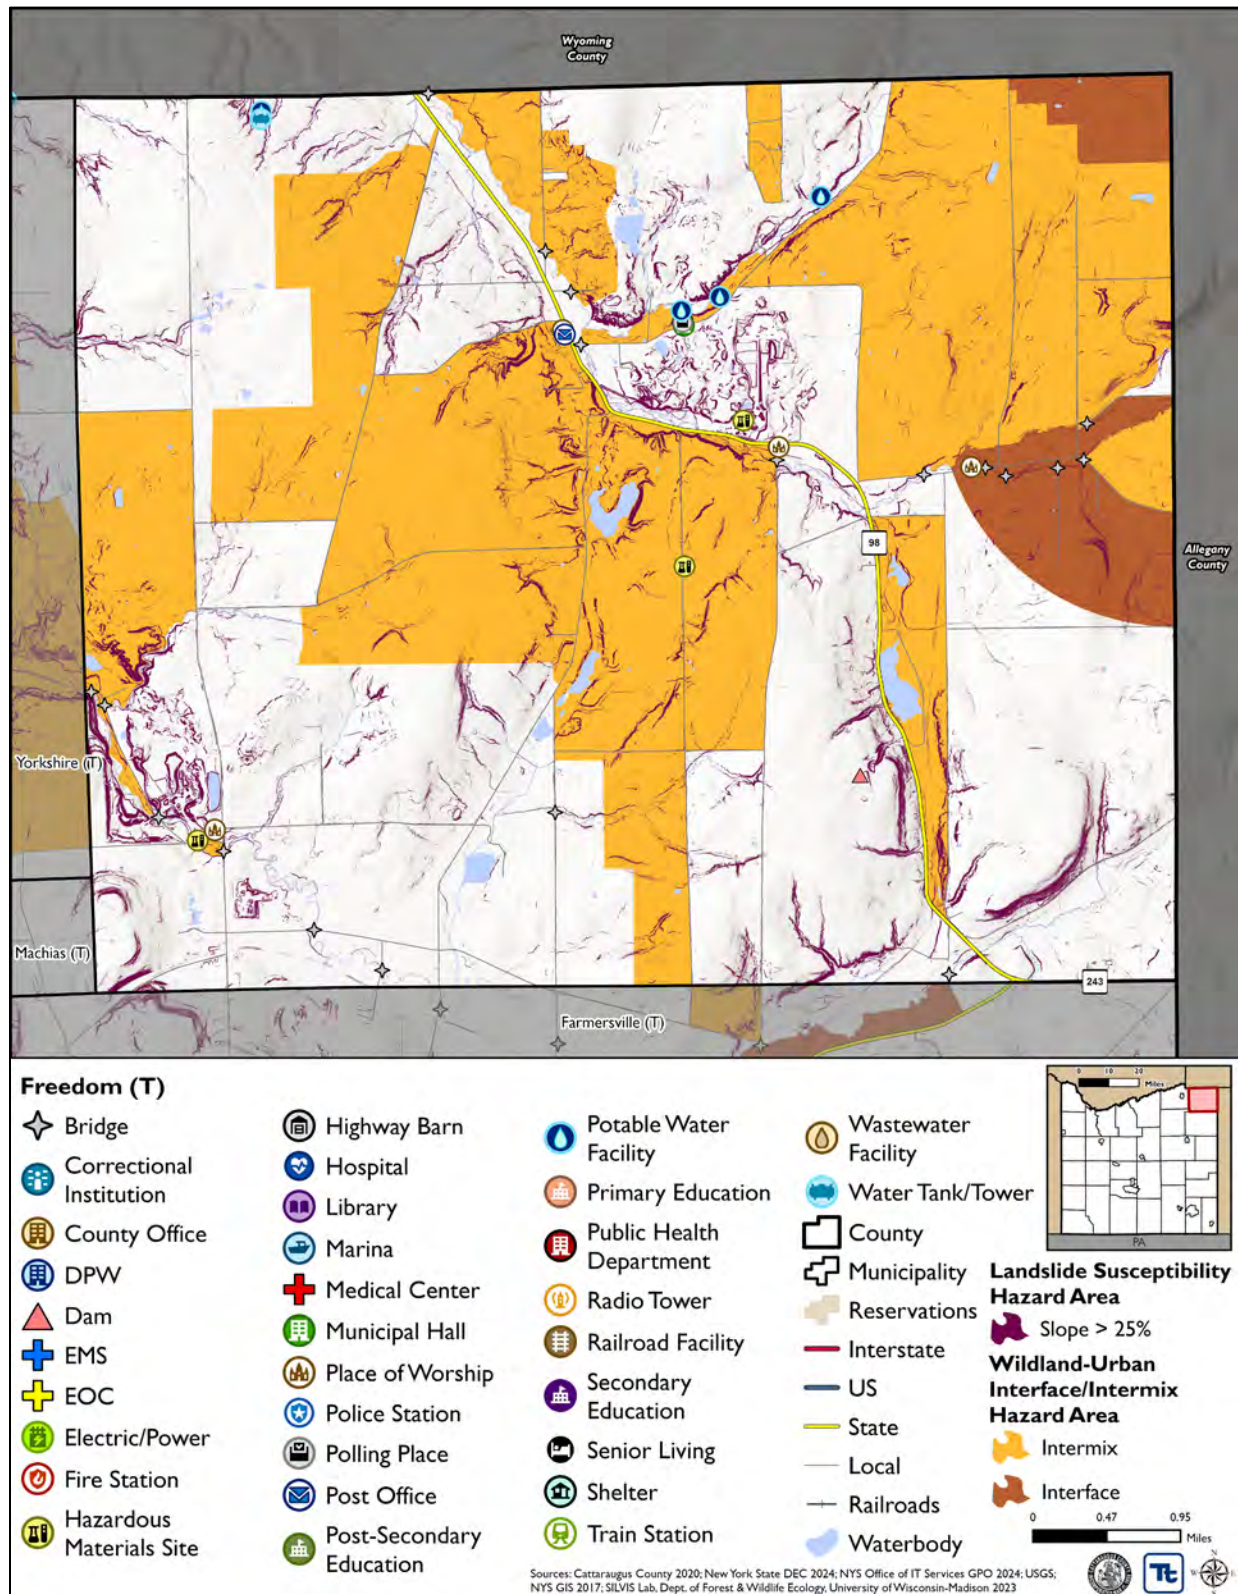

Figure 18-1. Freedom Flood Hazard Area Extent and Location Map

Note: The shown flood hazard area is limited to the FEMA-defined flood hazard areas. Areas of localized flooding are not reflected in the above Figure.

Figure 18-2. Freedom Landslide and Wildfire Hazard Area Extent and Location Map

18.6.2 Hazard Event History

The history of natural and non-natural hazard events in Freedom is detailed in Volume I, where each hazard profile includes a chronology of historical events that have affected the County and its municipalities. Table 18-14 provides details on loss and damage in Freedom during hazard events since the last hazard mitigation plan update.

Table 18-14. Hazard Event History in Freedom

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Freedom
October 31-November 1, 2019	DR-4472	No	Severe Storms, Straight-Line Winds, and Flooding	The Town did not incur any documented damage or losses.
March 13, 2020	EM-3434 DR-4480	Yes	COVID-19 Pandemic	The Town did not incur any documented damage or losses.
January 12, 2020	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 16, 2020	Thunderstorm Wind	N/A	Trees and wires were reported down in Gowanda.	The Town did not incur any documented damage or losses.
July 19, 2020	Thunderstorm Wind	N/A	Multiple reports of trees down around Gowanda, Ashville Bay, Napoli and Portville.	The Town did not incur any documented damage or losses.
August 15, 2020	Flash Flood	N/A	Marble Road and Potter Road in Lime Lake were reported to be washed out by law enforcement.	The Town did not incur any documented damage or losses.
September 7, 2020	Thunderstorm Wind	N/A	Property damage in Olean.	The Town did not incur any documented damage or losses.
November 15, 2020	High Wind	N/A	Property damage throughout Cattaraugus County.	The Town did not incur any documented damage or losses.
July 13, 2021	Thunderstorm Wind	N/A	Several reports were received of trees down, trees on cars, trees on houses, and powerlines down in Salamanca, Olean, and Allegany.	The Town did not incur any documented damage or losses.
December 11, 2021	High Wind	N/A	Dozens of reports of trees and powerlines down were received.	The Town did not incur any documented damage or losses.
March 6, 2022	High Wind	N/A	High wind	The Town did not incur any documented damage or losses.
July 24, 2022	Thunderstorm Wind	N/A	Trees and powerlines reported down in East Otto, Randolph, and South Dayton.	The Town did not incur any documented damage or losses.
November 20, 2022	EM-3589	Yes	Severe Winter Storm and Snowstorm	The Town did not incur any documented damage or losses.

Dates of Event	Event Type (Disaster Declaration)	County Designated?	Summary of Event	Summary of Damage and Losses in Freedom
January 2024	Windstorm	N/A	High winds and trees down	Tree removal

EM = Emergency Declaration (FEMA)

FEMA = Federal Emergency Management Agency

DR = Major Disaster Declaration (FEMA)

N/A = Not applicable

18.6.3 Hazard Ranking and Vulnerabilities

The hazard profiles in Volume I have detailed information regarding each planning partner's vulnerability to the identified hazards. The following presents key risk assessment results for Freedom .

Hazard Ranking

The participating jurisdictions have differing degrees of vulnerability to the hazards of concern, so each jurisdiction ranked its own degree of risk to each hazard. The community-specific hazard ranking is based on problems and impacts identified by the risk assessment presented in Volume I. The ranking process involves an assessment of the likelihood of occurrence for each hazard; the potential impacts of the hazard on people, property, and the economy; community capabilities to address the hazard; and changing future climate conditions. Freedom reviewed the County hazard ranking and individual results to assess the relative risk of the hazards of concern to the community. During the review of the hazard ranking, the Town noted the following:

- The Dam and Levee Failure hazard should be decreased from a 'Medium' risk to 'Low' risk as the dams in the Town are structurally sound and face minimal risk.
- There is no risk from the Landslide hazard in the Town, as residences are not structured around them.
- The Pandemic hazard should be decreased from 'Medium' to 'Low' due to created policies and plans which mitigate risk.
- The Severe Storm hazard should be decreased from 'High' to 'Medium' due to existing programs.
- The Wildfire hazard should be decreased from 'Medium' to 'Low' due to the lack of historical occurrences and minimal structures in possible impacted areas.

Table 18-15 shows Freedom's final hazard rankings for identified hazards of concern. Mitigation action development uses the ranking to target hazards with the highest risk.

Table 18-15. Hazard Ranking

Hazard	Rank
Dam and Levee Failure	Low
Flood	Medium
Landslide	No Risk
Pandemic	Low
Severe Storm	Medium
Severe Winter Storm	High
Utility Failure	Medium
Wildfire	Low

Note: The scale is based on the hazard rankings established in Volume I, modified as appropriate based on review by the jurisdiction

Critical Facilities

Table 18-16 identifies critical facilities in the community located in the 1 percent and 0.2 percent annual chance floodplains.

Table 18-16. Critical Facilities Flood Vulnerability

Source: Cattaraugus County 2024

18.6.4 Identified Issues

After a review of Freedom's hazard event history, hazard rankings, hazard location, and current capabilities, Freedom identified the following vulnerabilities within the community:

- Freedom Sand and Gravel Pit is located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.
- Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. The Clear Creek Bridge culvert is undersized or has been damaged from instances of flooding and the debris caused by severe storms and severe winter winters.

- The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.
- Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.
- The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.
- The Town has dams within its jurisdiction. Despite not being identified as high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.
- Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:
 - Freedom 01
 - Freedom 03
 - Freedom 04
 - Freedom 05
 - Freedom 06
 - Freedom 08
 - Freedom 09
 - Freedom 10
 - Freedom 15
 - Freedom 19

 - Freedom 36
 - Freedom Bridge

18.7 MITIGATION STRATEGY AND PRIORITIZATION

This section discusses the status of mitigation actions from the previous HMP, describes proposed hazard mitigation actions, and prioritizes actions to address over the next five years.

18.7.1 Past Mitigation Action Status

Table 18-17 indicates progress on the Town's mitigation strategy identified in the 2020 HMP. Actions that are still recommended but not completed or that are in progress are carried forward and combined with new actions as part of the mitigation strategy for this plan update. Previous actions that are now ongoing programs and capabilities are indicated as such and are presented in the capability assessment earlier in this annex.

18.7.2 Additional Mitigation Efforts

Freedom did not identify any additional mitigation efforts completed since the last HMP.

DRAFT

Table 18-17. Status of Previous Mitigation Actions

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Freedom-001	Protect Freedom Sand and Gravel Pit to the 0.2% annual chance flood event	Flood	Engineer, facility operator	<p>Problem: The Town of Freedom Sand and Gravel Pit is in the special flood hazard area and vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.</p> <p>Solution: The town will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the Sand and Gravel Pit to protect it to the 0.2% annual chance level. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the town will carry out the option.</p>	1. No Progress 2. Other projects took precedent.	1. Include 2. Not applicable 3. Not applicable
2020-Freedom-002	Update the Flood Damage Prevention Ordinance	Flood	Town board	<p>Problem: The Town of Freedom lacks an updated flood damage prevention ordinance.</p> <p>Solution: the town will develop and adopt an updated flood damage prevention ordinance</p>	1. No Progress 2. Other projects took precedent.	1. Include 2. Not applicable 3. Not applicable
2020-Freedom-003	Floodplain Administrator to attend training on floodplain management	Flood	County OES, Building Codes Dept.	<p>Problem: Floodplain Managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties.</p> <p>Solution: Obtain/host training and certification for floodplain managers</p>	1. No Progress 2. Lack of training availability.	1. Include 2. Not applicable 3. Not applicable

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
2020-Freedom-004	Provide information to residents, business owners, and organizations about what they can do to prevent their structures from wildfires.	Wildfires	Town board	Problem: Additional public education on wildfire risk is needed Solution: the town will develop an outreach program to educate the public about wildfires and what they can do to protect their structures.	1. No Progress 2. Other projects took precedent.	1. Include 2. Not applicable 3. Not applicable
2020-Freedom-005	Identify shelters and temporary housing location(s) for residents in the event of an emergency.	All Hazards	Town Supervisor, Town Clerk	Problem: The Town of Freedom currently does not have shelters or temporary housing locations in the event of an emergency. Solution: The town will confirm locations and notify households and businesses through mailing	1. Complete 2. Town identified locations	1. Discontinue 2. Not applicable 3. Town identified locations
2020-Freedom-006	Trim tree limbs away from buildings and structures.	Severe Storms; Severe Winter Storms	Municipalities and Hwy Dept	Problem: The town does not have a tree trimming program in place. It is unknown the safety of trees throughout the town. During wind events or heavy snow, falling tree branches can damage utilities and private property. Solution: The town will develop a tree trimming maintenance program and remove trees that pose a threat to structures	1. Complete 2. Town implemented program.	1. Discontinue 2. Not applicable 3. Town implemented program.
2020-Freedom-007	Generator for Town Hall	All Hazards	Town	Problem: Town Hall does not have back up power.	1. Complete 2. Town installed generator.	1. Discontinue 2. Not applicable 3. Town installed generator.

Project Number	Project Name	Hazard(s) Addressed	Responsible Party	Brief Summary of the Original Problem and the Solution (Project)	Action Review 1. Status (In Progress, Ongoing Capability, No Progress, Complete) 2. Provide a narrative to describe progress or obstacles that have prevented implementation	Next Steps 1. Project to be included in the 2025 HMP or Discontinue 2. If including action in the 2025 HMP, revise/reword to be more specific (as appropriate). 3. If discontinue, explain why.
				Solution: Purchase and install a generator so that Town Hall has backup power in the event the power goes out		
2020-Freedom-008	Generator for Town Barn	All Hazards	Town	Problem: Town Barn does not have backup power. Solution: Purchase and install a generator so that the Town Barn has backup power in the event the power goes out	1. Complete 2. Town installed generator.	1. Discontinue 2. Not applicable 3. Town installed generator.
2020-Freedom-009	Culvert on Clear Creek Bridge on Muton Hollow and Eagle St	Flood, Severe Storm	Highway Department	Problem: Outdated culvert on Clear Creek Bridge Solution: The town will install new culvert on Clear Creek Bridge	1. In Progress 2. Financial constraints	1. Include 2. Change to temporary shelters 3. Not applicable
2020-Freedom-010	Update the Emergency Operations Plan.	All Hazards	County, Town	Problem: Outdated Emergency Operations Plan Solution: Update town's Emergency Operation Plan to include current hazards	1. Complete 2. Town updated emergency plan.	1. Discontinue 2. Not applicable 3. Town updated emergency plan.
2020-Freedom-011	Update Building Code	All Hazards	County, Town	Problem: Building codes are outdated Solution: Update building codes so buildings are built to withstand hazards they face	1. Completed 2. Building codes updated and adopted in 2022.	1. Discontinue 2. Not applicable 3. Building codes updated and adopted in 2022.

18.7.3 Proposed Hazard Mitigation Actions for the HMP Update

Freedom participated in the mitigation strategy workshop for this HMP to identify appropriate actions to include in a local hazard mitigation strategy. Its comprehensive consideration of all possible activities to address hazards of concern included review of the following FEMA documents:

- FEMA 551 “Selecting Appropriate Mitigation Measures for Floodprone Structures” (March 2007)
- FEMA “Mitigation Ideas—A Resource for Reducing Risk to Natural Hazards” (January 2013).

The action worksheets included at the end of this annex list the mitigation actions that Freedom would like to pursue in the future to reduce the effects of hazards. The actions are dependent upon available funding (grants and local match availability) and may be modified or omitted at any time based on the occurrence of new hazard events and changes in Town priorities.

Table 18-18 indicates the range of proposed mitigation action categories. The four FEMA mitigation action categories and the six CRS mitigation action categories are listed in the table to further demonstrate the wide range of activities and mitigation measures selected.

Volume I identifies 14 evaluation criteria for prioritizing the mitigation actions. To assist with rating each mitigation action as high, medium, or low priority, a numeric rank is assigned (-1, 0, or 1) for each of the evaluation criteria. Table 18-19 provides a summary of the prioritization of all proposed mitigation actions for the HMP update.

Table 18-18. Analysis of Mitigation Actions by Hazard and Category

Hazard	Actions That Address the Hazard, by Action Category									
	FEMA				CRS					
	LPR	SIP	NSP	EAP	PR	PP	PI	NR	SP	ES
Dam and Levee Failure	X				X					
Flood	X	X		X	X		X		X	
Landslide										
Pandemic				X			X			
Severe Storm	X	X			X				X	
Severe Winter Storm	X	X			X				X	
Utility Failure		X							X	
Wildfire				X			X			

Local Plans and Regulations (LPR)—These actions include government authorities, policies or codes that influence the way land and buildings are being developed and built.

Structure and Infrastructure Project (SIP)—These actions involve modifying existing structures and infrastructure to protect them from a hazard or remove them from a hazard area. This could apply to public or private structures as well as critical facilities and infrastructure. This type of action also involves projects to construct structures to reduce the impact of hazards.

Natural Systems Protection (NSP)—These are actions that minimize damage and losses and preserve or restore the functions of natural systems.

Education and Awareness Programs (EAP)—These are actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. These actions may also include participation in national programs, such as StormReady and Firewise Communities

Preventative Measures (PR)—Government, administrative or regulatory actions, or processes that influence the way land and buildings are developed and built. Examples include planning and zoning, floodplain local laws, capital improvement programs, open space preservation, and storm water management regulations.

Property Protection (PP)—These actions include public activities to reduce hazard losses or actions that involve (1) modification of existing buildings or structures to protect them from a hazard or (2) removal of the structures from the hazard area. Examples include acquisition, elevation, relocation, structural retrofits, storm shutters, and shatter-resistant glass.

Public Information (PI)—Actions to inform and educate citizens, elected officials, and property owners about hazards and potential ways to mitigate them. Such actions include outreach projects, real estate disclosure, hazard information centers, and educational programs for school-age children and adults.

Natural Resource Protection (NR)—Actions that minimize hazard loss and preserve or restore the functions of natural systems. These actions include sediment and erosion control, stream corridor restoration, watershed management, forest and vegetation management, and wetland restoration and preservation.

Structural Flood Control Projects (SP)—Actions that involve the construction of structures to reduce the impact of a hazard. Such structures include dams, setback levees, floodwalls, retaining walls, and safe rooms.

Emergency Services (ES)—Actions that protect people and property during and immediately following a disaster or hazard event. Services include warning systems, emergency response services, and the protection of essential facilities

Table 18-19. Summary of Prioritization of Actions

Project Number	Project Name	Scores for Evaluation Criteria															High / Medium / Low
		Life Safety	Property Protection	Cost-Effectiveness	Political	Legal	Fiscal	Environmental	Social Vulnerability	Administrative	Hazards of Concern	Climate Change	Timeline	Community Lifelines	Other Local Objectives	Total	
2025-FreedomT-01	Critical Facility Protection	1	1	1	1	1	1	0	1	1	1	0	1	1	0	11	High
2025-FreedomT-02	Undersized Culverts	1	1	1	1	1	0	1	0	1	1	1	1	1	0	11	High
2025-FreedomT-03	Wildfire Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-FreedomT-04	Pandemic Education and Outreach	1	1	1	1	1	1	0	1	1	0	1	1	0	1	11	High
2025-FreedomT-05	Floodplain Management Training	1	1	1	1	1	1	1	1	1	0	1	1	0	0	11	High
2025-FreedomT-06	Flood Damage Prevention Ordinance Update	1	1	1	1	1	1	1	1	1	1	1	1	0	0	12	High
2025-FreedomT-07	Dam Owner Partnership	1	1	1	1	1	1	0	1	1	0	1	1	1	0	11	High
2025-FreedomT-08	Bridge Evaluations	1	1	1	1	0	0	1	1	1	1	1	1	1	0	11	High

Note: Volume I, Section 16 (Mitigation Strategy) conveys guidance on prioritizing mitigation actions. Low (0-6), Medium (7-10), High (11-14).

Action 2025-FreedomT-01. Critical Facility Protection

Lead Agency:	Critical Facility Owners and Managers										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	Freedom Sand and Gravel Pit located in the special flood hazard area and may be vulnerable to flooding. Critical facilities must be protected to the 0.2% annual chance flood level.										
Description of the Solution:	<p>The Town will conduct a feasibility assessment to determine what additional floodproofing measures are needed at the critical facilities to protect them to the 500-year flood level. The facility manager will be contacted to be informed of potential mitigation measures. Options include:</p> <ul style="list-style-type: none">• Elevation of facility• Floodproofing of facility• Mobile flood barriers <p>Once the most cost-effective option is identified, the facility manager will carry out the option.</p>										
Estimated Cost:	Medium										
Potential Funding Sources:	FEMA HMA, USDA Community Facilities Grant Program, Emergency Management Performance Grants (EMPG) Program, Town Budget										
Implementation Timeline:	Within 5 Years										
Goals Met:	1, 3, 5										
Benefits:	Ensures continuity of operations of several critical facilities in the Town.										
Impact on Socially Vulnerable Populations:	Protection of critical facilities provides an opportunity for first responders and emergency managers to maintain critical services that socially vulnerable populations rely on.										
Impact on Future Development:	The risk of significant damage occurring to the structure will be reduced, which will allow critical operations to be maintained or only briefly interrupted in severe events. This provides continued support to both current and future development in the service area.										
Impact on Critical Facilities/Lifelines:	This action will protect critical facilities, maintaining the critical services that it provides.										
Impact on Capabilities:	This action improves continuity of operations during a flood event, allows for a more rapid return to pre-disaster capabilities after a flood event, and faster deployment of post disaster capabilities.										
Climate Change Considerations:	This action addresses anticipated increases in flooding frequency and severity through protection to the 500-year (0.2-percent annual chance) flood level.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><thead><tr><th>Action</th><th>Evaluation</th></tr></thead><tbody><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Relocate facility</td><td>Relocation is expensive and results in loss or delay of critical services in the immediate area</td></tr><tr><td>Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events</td><td>Reduction in response times and delay of critical services in the immediate area.</td></tr></tbody></table>			Action	Evaluation	No Action	Current problem exists	Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area	Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.
Action	Evaluation										
No Action	Current problem exists										
Relocate facility	Relocation is expensive and results in loss or delay of critical services in the immediate area										
Establish plans to enter into MOU with neighboring critical facilities to provide service during flood events	Reduction in response times and delay of critical services in the immediate area.										

Action 2025-FreedomT-02. Undersized Culverts

Lead Agency:	Highway Department		
Supporting Agencies:	Code Enforcement, Engineer		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input checked="" type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	Undersized culverts often result in the flooding of roadways due to the inability to handle the influx of water. Debris build-up in these undersized pipes may also result in water back-flow, leading to further roadway flooding instances and impacting the integrity of the culverts. The Clear Creek Bridge culvert is undersized or has been damaged from instances of flooding and the debris caused by severe storms and severe winter winters.		
Description of the Solution:	The Town Engineer will complete an engineering survey of the Clear Creek Bridge culvert to determine the proper size necessary to provide stormwater capacity. The Town Highway Department will complete the necessary upsizing for the culvert.		
Estimated Cost:	TBD after study is complete		
Potential Funding Sources:	FEMA HMA, CHIPS, Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 4		
Benefits:	Overall flooding will be reduced, which will result in less frequency of road closures and reduced damage occurring to culverts and roadways during severe events. Businesses are likely to remain in place if they are able to remain open, or re-open sooner following a flood.		
Impact on Socially Vulnerable Populations:	Areas that were previously vulnerable to frequency or severe flooding events will be less likely to be impacted by flooding events.		
Impact on Future Development:	Future development in the impacted area will be less likely to be flooded.		
Impact on Critical Facilities/Lifelines:	Transportation routes are more likely to remain open. Evacuation routes will remain intact. Access to health and medical facilities will be maintained, both for healthcare workers and the population who requires treatment for injuries and illness.		
Impact on Capabilities:	Identifying the culverts that are at greatest risk of damage or failure can allow for resource staging to take place where the need is greatest ahead of a flood event.		
Climate Change Considerations:	Climate change is likely to result in more frequent and severe rainfall events. This action upsizes culvert sizes to meet changing stormwater needs as the result of climate change.		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input checked="" type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input checked="" type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove roadway		Roadway cannot be removed
	Raingardens		Raingardens are unlikely to be able to absorb enough stormwater to prevent flooding during severe rainfall events.

Action 2025-FreedomT-03. Wildfire Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input checked="" type="checkbox"/> Wildfire									
Description of the Problem:	The Town faces risk from wildfires but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on wildfire risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the wildfire hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the wildfire hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the wildfire hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the wildfire hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)									
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)									
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low								
Alternatives:	<table><tr><th>Action</th><th>Evaluation</th></tr><tr><td>No Action</td><td>Current problem exists</td></tr><tr><td>Rely on state or federal resources</td><td>Resources may be generalized and not specific to the risks in the Town</td></tr><tr><td>Use only a few methods for distribution</td><td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td></tr></table>	Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance		
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-FreedomT-04. Pandemic Education and Outreach

Lead Agency:	Town Supervisor										
Supporting Agencies:	Town Board, Cattaraugus County										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input checked="" type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The Town faces risk from pandemic but does not have a comprehensive education and outreach program to educate residents and businesses about hazard mitigation, preparation, response, and recovery utilizing a variety of outreach methods. The Town does not currently have hazard mitigation information and outreach on the Town website.										
Description of the Solution:	Create outreach materials, or utilize those from Cattaraugus County, on pandemic risks and methods of mitigation measures. Methods of distribution may include Town events, the Town newsletters, social media, the Town website, and having the materials on display for the public at Town libraries and offices. Outreach materials will be specified with education and information for the pandemic hazard.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	1 year										
Goals Met:	1, 2, 3, 4										
Benefits:	This action will improve the public education and outreach capabilities in the Town by including discussions on disaster preparedness and hazard mitigation to residents and business owners, which will contribute to the resiliency of the Town.										
Impact on Socially Vulnerable Populations:	Socially vulnerable populations will learn how to prepare for and mitigate the pandemic hazard which may impact them in the Town.										
Impact on Future Development:	Not applicable										
Impact on Critical Facilities/Lifelines:	Businesses, which may be considered critical facilities or lifelines, would be more informed on how to prepare for emergency events and mitigate the risks of the pandemic hazard. With these businesses becoming more resilient, this action would contribute to their continuity of operations.										
Impact on Capabilities:	This action would build upon the County's public education and outreach capabilities and adapt it to the Town's needs.										
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will inform residents and business owners of how to reduce risk from the pandemic hazard and how climate change may exacerbate those risks.										
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)										
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)										
Priority	<input checked="" type="checkbox"/> High <input type="checkbox"/> Medium <input type="checkbox"/> Low										
Alternatives:	<table border="1"> <thead> <tr> <th>Action</th> <th>Evaluation</th> </tr> </thead> <tbody> <tr> <td>No Action</td> <td>Current problem exists</td> </tr> <tr> <td>Rely on state or federal resources</td> <td>Resources may be generalized and not specific to the risks in the Town</td> </tr> <tr> <td>Use only a few methods for distribution</td> <td>Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance</td> </tr> </tbody> </table>			Action	Evaluation	No Action	Current problem exists	Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town	Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance
Action	Evaluation										
No Action	Current problem exists										
Rely on state or federal resources	Resources may be generalized and not specific to the risks in the Town										
Use only a few methods for distribution	Using only a few methods of distribution may hinder socially vulnerable populations from receiving the guidance										

Action 2025-FreedomT-05. Floodplain Management Training

Lead Agency:	Code Enforcement		
Supporting Agencies:	Town Board		
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire		
Description of the Problem:	Floodplain managers require training. Those responsible for floodplain management are lacking in their knowledge of required duties. Training is sorely needed for all municipal officials and for code enforcement officials in charge of municipalities. Very little zoning precludes homeowners from building in floodplains, leading to problems later.		
Description of the Solution:	Where feasible, the Town will have Code staff attend trainings at FEMA's EMI in Emmitsburg Maryland for NFIP Basics and the Intermediate Floodplain management course (E0273). Where not feasible, officials will attend virtual trainings and review available resources from FEMA and ASFPM at the ASFPM (https://www.floods.org/) website. Encourage staff to become Certified Floodplain Managers via the Association of State Floodplain Manager's CFM Certification Program.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 3, 4		
Benefits:	Providing an opportunity for staff and officials to become further educated on floodplain management practices and standards can aid in the development of plans and procedures in a way that is conscious of the flood hazard.		
Impact on Socially Vulnerable Populations:	Officials that are up to date on flood risk are more likely to encourage development outside areas of high flood risk, which is where socially vulnerable populations have historically resided. Safer dwellings may be developed in a less vulnerable location.		
Impact on Future Development:	Officials that understand best practices in floodplain management will have the opportunity to influence future development and prevent unsafe building in flood hazard areas.		
Impact on Critical Facilities/Lifelines:	The opportunity will exist for leaders and operators of utilities and other essential services to attend training and provide direction on ways the prepare for, plan for, and prevent interruptions in service as a result of a flood.		
Impact on Capabilities:	Officials that attend trainings will have a more confident understanding of floodplain management principles and the basics of NFIP requirements and standards.		
Climate Change Considerations:	Climate change is likely to result in stronger and more frequent rainfall events that will contribute to increased flood risk		
Mitigation Category	<input type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input checked="" type="checkbox"/> Education and Awareness Programs (EAP)		
CRS Category	<input type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input checked="" type="checkbox"/> Public Information (PI) <input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)		
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Hire outside contractors for floodplain administration		Costly
	Establish shared service agreements for floodplain administration from neighboring municipalities		Neighboring municipalities are unlikely to have the staff capacity to take on this role

Action 2025-FreedomT-06. Flood Damage Prevention Ordinance Update

Lead Agency:	Code Enforcement										
Supporting Agencies:	Town Board										
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic <input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire										
Description of the Problem:	The current flood damage prevention ordinance does not include the 2-foot mandated NYS freeboard requirements. While the existing ordinance may be compliant with NFIP requirements, State requirements which exceed NFIP requirements must be adhered to.										
Description of the Solution:	The Town will work with Cattaraugus County and NYSDEC to ensure its Flood Damage Prevention Ordinance is updated to adhere to NYS requirements. After obtaining the appropriate review and concurrence by the NFIP State Coordinator and the FEMA Regional Office, the Town will update and adopt the Flood Damage Prevention Ordinance.										
Estimated Cost:	Low										
Potential Funding Sources:	Town Budget										
Implementation Timeline:	Within 3 years										
Goals Met:	1, 2, 4										
Benefits:	The updated ordinance will improve floodplain management, meet NFIP and State requirements, and increase resilience of new and substantially improved structures in the floodplain.										
Impact on Socially Vulnerable Populations:	The action will result in better regulation of construction standards within the Special Flood Hazard Area where significant risk to socially vulnerable populations exists.										
Impact on Future Development:	The action will result in stronger regulation of construction standards for future development in the Special Flood Hazard Area.										
Impact on Critical Facilities/Lifelines:	Critical facilities and lifelines located in the Special Flood Hazard Area will be required to meet the requirements set forth in the ordinance.										
Impact on Capabilities:	This action will improve floodplain management capabilities through better outlining of responsibilities and administrative procedures.										
Climate Change Considerations:	The updated ordinance includes the State's higher standards that are in place to address heightened flood risk due to climate change such as those for floodway rise and mandatory freeboard.										
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP) <input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)

Action 2025-FreedomT-07. Dam Owner Partnership

Lead Agency:	Town Board		
Supporting Agencies:	NYS DEC, Dam Owners		
Hazard(s) of Concern:	<input checked="" type="checkbox"/> Dam and Levee Failure <input type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input type="checkbox"/> Severe Storm <input type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire	
Description of the Problem:	The Town has dams within its jurisdiction. Despite not being high-hazard potential dams, these structures have the potential to impact the people, property, infrastructure, and environment nearby.		
Description of the Solution:	The Town will work with the owners of the dams to ensure inspections and safety procedures are up to date. If cost-effective mitigation measures or retrofit options are identified that can increase the level of safety and length of useful life, the Dam Owner will pursue funding support, permit approval from NYS DEC, and implement the cost-effective measures.		
Estimated Cost:	Low		
Potential Funding Sources:	Town Budget		
Implementation Timeline:	Within 5 years		
Goals Met:	1, 2, 3		
Benefits:	This action will improve the safety and security of those who live near the dams and increase the resilience of responding agencies.		
Impact on Socially Vulnerable Populations:	The action will result in better preparedness for those living near areas where the dams are located.		
Impact on Future Development:	Future development near the dams will be more secure as safety procedures and inspections are regularly performed on the dams.		
Impact on Critical Facilities/Lifelines:	Dams are considered a critical facility. This action will create an understanding of the safety procedures in place for each identified dam and strengthen the structural integrity of dam, as needed.		
Impact on Capabilities:	This action will improve planning and response capabilities through the understanding of responsibilities and procedures.		
Climate Change Considerations:	Climate change may result in an increase in the frequency and severity of weather-related disaster events, which may contribute to the likelihood of a dam failure event. This action will increase the capabilities to respond to these events.		
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)	
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)	
Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Town will be unaware of any safety concerns for the dam or its condition
	Utilize information from NYS DEC		Owners may not be required to submit a safety plan to the State
	Utilize information from the National Inventory of Dams		Not all dams are listed on the inventory

Action 2025-FreedomT-08. Bridge Evaluations

Lead Agency:	Highway Department	
Supporting Agencies:	Cattaraugus County Engineering, Cattaraugus County Public Works, NYS DOT	
Hazard(s) of Concern:	<input type="checkbox"/> Dam and Levee Failure <input checked="" type="checkbox"/> Flood <input type="checkbox"/> Landslide <input type="checkbox"/> Pandemic	<input checked="" type="checkbox"/> Severe Storm <input checked="" type="checkbox"/> Severe Winter Storm <input type="checkbox"/> Utility Failure <input type="checkbox"/> Wildfire
Description of the Problem:	<p>Scour on bridges can develop due to erosion. Erosion may occur due to waters impacting the bridge's structure during severe winter storms and severe storms when the precipitation causes the water movements to be more erratic. Rising waters may cause flooding conditions to further erode the structure of the bridge. The following bridges in the jurisdiction should be evaluated to determine useability and to identify potential solutions, as necessary:</p> <ul style="list-style-type: none">• Freedom 01• Freedom 03• Freedom 04• Freedom 05• Freedom 06• Freedom 08• Freedom 09• Freedom 10• Freedom 15• Freedom 19• Freedom 24• Freedom 25• Freedom 29• Freedom 36• Freedom Bridge	
Description of the Solution:	The Highway Department will work with Cattaraugus County Engineering and Public Works to evaluate each bridge to determine its current usability. The evaluation will indicate whether the County will need to replace or retrofit the identified bridges and causeways. This evaluation should be performed in partnership and/or with feedback from NYS DOT as necessary.	
Estimated Cost:	Medium	
Potential Funding Sources:	FEMA HMA, County Budget, BRIDGENY	
Implementation Timeline:	Within 5 years	
Goals Met:	1	
Benefits:	This action will ensure the bridges in the jurisdiction are structurally sound to continue in operation.	
Impact on Socially Vulnerable Populations:	Not applicable	
Impact on Future Development:	Not applicable	
Impact on Critical Facilities/Lifelines:	This action will ensure transportation routes remain open and accessible to the public for daily use and evacuation needs; the bridges provide a point of access for first responders into communities that may have faced damage from a hazard event on either side of the bridges.	
Impact on Capabilities:	Not applicable	
Climate Change Considerations:	Climate change is likely to increase the intensity and frequency of many climate related disaster events. This action will work to ensure the structure of the bridges are impervious to erosion at their base due to rising water levels.	
Mitigation Category	<input checked="" type="checkbox"/> Local Plans and Regulations (LPR) <input type="checkbox"/> Structure and Infrastructure Project (SIP)	<input type="checkbox"/> Natural Systems Protection (NSP) <input type="checkbox"/> Education and Awareness Programs (EAP)
CRS Category	<input checked="" type="checkbox"/> Preventative Measures (PR) <input type="checkbox"/> Property Protection (PP) <input type="checkbox"/> Public Information (PI)	<input type="checkbox"/> Natural Resource Protection (NR) <input type="checkbox"/> Structural Flood Control Projects (SP) <input type="checkbox"/> Emergency Services (ES)

Priority	<input checked="" type="checkbox"/> High	<input type="checkbox"/> Medium	<input type="checkbox"/> Low
Alternatives:	Action		Evaluation
	No Action		Current problem exists
	Remove bridges		May cause significant traffic problems
	Replace bridges		Cost prohibitive

DRAFT

19. VILLAGE OF GOWANDA

This jurisdictional annex to the Cattaraugus County Hazard Mitigation Plan (HMP) provides information to assist public and private sectors in the Village of Gowanda with reducing losses from future hazard events. This annex is not guidance of what to do when a disaster occurs; its focus is on actions that can be implemented prior to a disaster to reduce or eliminate damage to property and people. The annex presents a general overview of Gowanda, describes who participated in the planning process, assesses Gowanda's risk, vulnerability, and capabilities, and outlines a strategy for achieving a more resilient community.

19.1 HAZARD MITIGATION PLANNING TEAM

The Village of Gowanda identified primary and alternate HMP points of contact and developed this plan over the course of several months, with input from many Village departments. The Deputy Mayor represented the community on the Cattaraugus County HMP Steering Committee and supported the local planning process by securing input from persons with specific knowledge to enhance the plan. All departments were asked to contribute to the annex development through reviewing and contributing to the capability assessment, reporting on the status of previously identified actions, and participating in action identification and prioritization.

Table 19-1 summarizes Village officials who participated in the development of the annex and in what capacity. Additional documentation of the Village's planning activities through Steering Committee meetings is included in Volume I.

Table 19-1. Hazard Mitigation Planning Team

Primary Point of Contact	Alternate Point of Contact
Name/Title: Carol Sheibley, Deputy Mayor Address: 27 East Main Street, Gowanda, NY 14070 Phone Number: (716) 532-3353 Email: csheib@verizon.net	Name/Title: Nicholas Crassi, Disaster Coordinator Address: 27 East Main Street, Gowanda, NY 14070 Phone Number: (716) 640-2707 Email: racernick07@earthlink.net
National Flood Insurance Program Floodplain Administrator	
Name/Title: Jason Pickering, Code Enforcement Address: 27 East Main Street, Gowanda, NY 14070 Phone Number: (716) 532-3353 ext. 104 Email: gowandacode@gmail.com	
Additional Contributors	
Name/Title: Peter Sisti, Interim Mayor Method of Participation: Provided information in annex	
Name/Title: David Smith, Former Mayor Method of Participation: Provided updated information on NFIP	
Name/Title: Mark Burr, Engineer Method of Participation: Provided key information which assisted in the development of the Village's annex.	

19.2 COMMUNITY PROFILE

The Village of Gowanda lies in the northwest region of Cattaraugus County in western New York State. The Village of Gowanda has a total area of 1.6 square miles. The Cattaraugus Creek flows through the Village. The Village lies in both Erie County and Cattaraugus County, with part of the Village in the Town of Collins (Erie County) and part

of the Village in the Town of Persia (Cattaraugus County). The Village is bordered to the west by the Town of Perrysburg and the Cattaraugus Nation Indian Reservation.

Research has shown that some populations are at greater risk from hazard events because of decreased resources or physical abilities. These populations can be more susceptible to hazard events based on a number of factors including their physical and financial ability to react or respond during a hazard, and the location and construction quality of their housing. Data from the 2022 5-Year American Community Survey indicates that 14 percent of the population is 5 years of age or younger, 18.4 percent is 65 years of age or older, 1.3 percent is non-English speaking, 11.7 percent is below the poverty threshold, and 22.3 percent is considered disabled.

19.3 JURISDICTIONAL CAPABILITY ASSESSMENT AND INTEGRATION

Gowanda performed an inventory and analysis of existing capabilities, plans, programs, and policies that enhance its ability to implement mitigation strategies. Volume I describes the components included in the capability assessment and their significance for hazard mitigation planning. The jurisdictional assessment for this annex includes analyses of the following:

- Planning and regulatory capabilities
- Development and permitting capabilities
- Administrative and technical capabilities
- Fiscal capabilities
- Education and outreach capabilities
- Classification under various community mitigation programs
- Adaptive capacity to withstand hazard events

For a community to succeed in reducing long-term risk, hazard mitigation must be integrated into day-to-day local government operations. As part of the hazard mitigation analysis, planning and /policy documents were reviewed and each jurisdiction was surveyed to obtain a better understanding of their progress toward plan integration. Development of an updated mitigation strategy provided an opportunity for Gowanda to identify opportunities for integrating mitigation concepts into ongoing Village procedures.

19.3.1 Planning and Regulatory Capability and Integration

Table 19-2 summarizes the planning and regulatory tools that are available to Gowanda.

Table 19-2. Planning and Regulatory Capability and Integration

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
CODES, ORDINANCES, & REGULATIONS				
Building Code	Yes	Chapter 26: Uniform Code Enforcement	State and Local	Code Enforcement

How has or will this be integrated with the HMP and how does this reduce risk?

The purpose of this Chapter is to provide for enforcement procedures in the Village of Gowanda of the New York Uniform Fire Prevention and Building Code, hereinafter called "Uniform Code".

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
Zoning/Land Use Code	Yes	Chapter 30: Zoning	Local	CEO
How has or will this be integrated with the HMP and how does this reduce risk? Provides minimum requirements for the construction of structures in the Village, including construction in designated Flood Hazard Areas and Floodways, and for the issuance of building permits, special use permits and variances.				
Subdivision Code	Yes	Chapter 31: Subdivision Regulations	Local	Planning Board
How has or will this be integrated with the HMP and how does this reduce risk? The purpose of these regulations as herein adopted shall be to provide for the orderly growth and development of the Village with adequate provision for the housing, transportation, distribution, comfort, convenience, safety, health, and welfare of its population.				
Site Plan Code	Yes	Chapter 31, Article II: Site Plan Review Procedures	Local	Planning Board
How has or will this be integrated with the HMP and how does this reduce risk? It is the purpose and intent of this chapter to protect and promote the health, safety and general welfare of the residents of the Village of Gowanda by preserving the historic character and appearance of the Village of Gowanda, the attractiveness of whose residential and business areas is the economic mainstay of the community. The following site plan provisions are intended to secure compliance with the requirements and standards set forth in this chapter and with accepted professional design practice for such site improvements as grading, drainage, means of access, signs, architectural features, screens, sidewalks, curbs, parking, landscaping, fences, driveways, location and dimension of buildings. It further is to assure that the development and redevelopment of land within the village is appropriate and compatible with the development of surrounding land and consistent with the approved Master Plan, It is not intended to prohibit development that is otherwise permitted under the applicable zoning regulations; rather it is intended to improve the function, design, aesthetics' and safety of that development and to provide a context for the diverse yet harmonious architectural and landscape design.				
Stormwater Management Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Post-Disaster Recovery/ Reconstruction Code	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Real Estate Disclosure Requirements	Yes	Property Condition Disclosure Act, NY Code - Article 14 §460-467	State	NYS Department of State, Real Estate Agent
How has or will this be integrated with the HMP and how does this reduce risk? In addition to facing potential liability for failing to disclose under the exceptions to "caveat emptor," a home seller must make certain disclosures under the law or pay a credit of \$500 to the buyer at closing. While the PCDA requires a seller to complete a standardized disclosure statement and deliver it to the buyer before the buyer signs the final purchase contract, in practice, most home sellers in New York opt not to complete the statement and instead pay the credit.				
Growth Management	No	-	-	-
How has or will this be integrated with the HMP and how does this reduce risk?				
Environmental Protection Ordinance(s)	Yes	Local Law 1, 2002: Urban Tree Local Law	Local	Tree Committee
How has or will this be integrated with the HMP and how does this reduce risk? This local law establishes policies, regulations, and standards necessary to ensure that the Village will continue to realize the benefits provided by its urban trees. The provisions of this local law are enacted to: 1. Establish and maintain the maximum sustainable amount of tree cover on public and private lands in the Village;				

	Jurisdiction has this? (Yes/No)	Citation and Date (code chapter or name of plan, date of enactment or plan adoption)	Authority (local, county, state, federal)	Responsible Person, Department or Agency
2. Maintain Village trees in a healthy and non-hazardous condition through good arboricultural practices; 3. Establish and maintain appropriate diversity in tree species and age classes to provide a stable and sustainable urban forestation. 4. Protect and enhance the Village's small-town characteristics by assuring that decisions with regard to urban trees are consistent with the Village Master Plan				
Flood Damage Prevention Ordinance	Yes	Chapter 86: Flood Damage Protection	Federal, State, County and Local	Code Enforcement
